CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 and 25 Vic, Cap. 67.

The Council met at the Council Chamber on Saturday, the 7th January, 1888.

Present:

The HON, SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding*.
The HON. G. C. PAUL, C.I.E., Advocate-General of Bengal.
The HON. H. J. REYNOLDS, C.S.I.
The HON. C. P. L. MACAULAY, C.I.E.
The HON. T. T. ALLEN.
The HON. SIR HENRY HARRISON, KT.
The HON. SIR ALFRED CROFT, K.C.I.E.
The HON. MOULVIE ABDUL JUBBAR.
The HON. G. IRVING.
The HON. BABU KALI NATH MITTER.
The HON. DR. MOHENDRALAL SIRCAR, C.I.E.
The HON. C. H. MOORE.
The HON. DR. GOOROO DAS BANERJEE.

NEW MEMBERS.

The HON. MR. C. H. MOORE and the HON. DR. GOOROO DAS BANERJEE took their seats in Council.

CALCUTTA AND SUBURBAN MUNICIPALITIES AMALGAMATION BILL.

THE HON. SIR HENRY HARRISON presented the preliminary report of the Select Committee on the Bill to consolidate and amend the law relating to the municipal affairs of the town and suburbs of Calcutta, and moved that it be published. He explained that the Select Committee, knowing that this part of the Bill would probably attract a special share of public attention, had thought it desirable, as soon as they had finished that portion of the Act which embodied the proposed constitution of the new Corporation, to lay these sections, with a preliminary report, before the Council, and to suggest for His Honor's consideration, as the President, whether it would not be advisable to publish this report and this portion of the Bill separately, in order that the public might thus know the precise proposals which were coming before the Council. It also further appeared to the Committee—and he begged to suggest this for His Honor's consideration—that there might be no grave objection, after the new sections had been published for a reasonable period, to commence the consideration of them in Council without waiting for the final report of the Committee. It was probable that this part of the Bill would involve much discussion in Council, and obviously it would save time if they were able to commence the discussion of it without waiting for the procedure portion of the Bill which would follow.

Turning now to the new sections, it would be seen that the earlier sections referring to the number of members, the proportion of nominated and elected Commissioners, and the number of wards, had not undergone any change at the hands of the Committee. This ought not to be taken as expressing the unanimous or even probably the general opinion of the Select Committee that this was the best possible constitution for Calcutta. It rather represented a compromise or mean between extreme views, the best system which they could put forward as involving the least radical changes. He himself had always maintained that larger wards would be more conducive to a good electoral system, but the Committee had not a *tabula rasa* to work upon. The town now consisted of eighteen wards, and there appeared to be a general sentiment in favour of keeping the present arrangement On those grounds, therefore, the Committee had as it were gravitated to the conclusion that the best number of wards for the new constitution was 25, and thus no alteration had been made.

The only other point which required explanation was the action which the Committee had taken in regard to the system of voting. As the report explained, the plural vote was partially allowed in Calcutta by the present law, and it had partially grown up under the way in which that law had been construed. Now plural voting, as thus exercised, was in some respects open to grave objection. He himself remembered one case in which no less than twenty-nine persons claimed to vote as paying rates for a single property, and therefore last year the Committee had taken the first step in regulating this. But they had been forced to admit that these sections, though they might diminish, would not remove the anomaly, and therefore the Committee found themselves in the position of being called upon to decide whether they would abandon the plural vote altogether, or place it on a broad and equitable basis. It would be seen that the great majority of them were in favour of maintaining it, and, as he attached great importance to this principle, he hoped the Council would bear with him while he made an explanation of almost a personal character. He had naturally taken the greatest interest in the constitution of the Corporation of Calcutta. Twenty-six years ago the town was governed on what he might call an absolute or beauraucratic basis. Three officers appointed by the Government managed all its affairs. In 1863 the principle of associating a large number of the citizens in the administration of the town was introduced by vesting the control in the hands of the Justices. At the same time all the Justices were Government nominees, so that though practically this change did introduce a very considerable non-official and popular element, in theory it left the control as completely in the hands of the Government as before. In 1876 another step was taken, and the system of election was introduced. Now from the many discussions,

controversies, reports, and opinions which had clustered round this measure, it was evident to him that two rival conceptions were struggling for the mastery in the minds of the public. With many the elective system had been treated as identical with the admission of a principle which it was hardly an exaggeration to call the Divine right of majorities. It was regarded as equivalent to an admission that the majority of the people, whatever their fitness, whatever use they might make of their power, had a sort of inherent right to govern the town as they might please. It seemed to have been left out of sight altogether, he did not say by all persons, but by many, and he could cite several of the reports which had been addressed to this Council in illustration of this, that there was a middle course which widely differed in principle from this allegiance to majorities, viz., that it was advisable and expedient in the highest sense, in the cause of good government, that those classes and persons in the town who were most fitted to understand its interests and guide its administration wisely, should be associated together in that administration, and that, as these classes knew best who understood their views and their wants, they should not have representatives chosen for them by the Government, but should elect their own representatives as Commissioners. This principle held up fitness and not numbers as the final test, and nomination was expressly maintained side by side with election on purpose to secure a proper voice to the classes who possessed fitness without numbers. He himself had no doubt, and he thought that most of those he was addressing would agree, that this was the truer interpretation of the intention of the Legislature in introducing the elective system, and at any rate it was the only sound principle which could be applied to the government of a city like Calcutta. This was the view of the electoral system which he had consistently held from the time he had had any voice in the government of Calcutta, and he had observed that it led to continual misrepresentation of his views on one side or the other. If he said anything or wrote anything deprecating the Divine right of majorities, he was accused of backsliding and of advocating official absolutism. If he said anything in praise of the good work done by the elected representatives, it was at once assumed that he was desirous of seeing democratic institutions introduced into India, or at least into Calcutta. Now the question of the plural vote did seem to him to have some bearing on this very important principle. We naturally took the English electoral system as our model, and there we found two systems working in local bodies: the system of one-man-one-vote and the plural vote. If anything, the plural vote seemed the more favoured, but in boroughs the one-man-one-vote system was the law. This being so, and having reference to the fact that, in the previous ten years in Calcutta, an indirect plural vote had grown up, the Select Committee had felt themselves at liberty to recommend it as not inviting any radical change. He did submit that it was very desirable, having regard to the exaggerated views which were held regarding the bearing of an elective system, that that principle of voting should be adopted by the Council which most approximated to the true and correct theory.

Now, though it might be too much to say that the one-man-one-vote rule necessarily involved the principle of the inherent right of majorities to do what they liked in Calcutta, it was not too much to say that it decidedly looked in that direction, and, if adopted, it would so far go to confirm any erroneous views which were prevalent. It seemed to say that, though the Legislature was still bound not to give a voice in the election of a Commissioner to those who were totally disqualified, nevertheless, when it had once fixed the pecuniary limit which might be assumed to imply fitness, it was not justified in going any further, but must leave the numerical majority above this limit unchecked in their action, whether this led to the election of those who were most competent or least competent to govern the town. On the other hand, the adoption of the plural vote seemed to imply that the Legislature recognised degrees of fitness. It enshrined the principle that those who paid a larger share of taxation would, on the average, be fitter to govern, and while a minimum vote was to be given to a larger number paying the minimum in rates, nevertheless a more influential voice should be given to those who paid more, and who might be expected to exercise their right of voting more wisely. Even if the practical difference between the two systems, the plural and

the single vote, proved small, it seemed very important to adopt that method which indicated that the Legislature recognised degrees of fitness, and not mere numerical majorities. This he held to be the only sound basis on which those interested in the well-being of the town could be associated together to form its governing body. Those who contended that the introduction of the elective system was tantamount to blind submission to the majority, contended for a principle which must prove equally fatal to its expansion or its success. While those who contended that it meant the judicious conferring of power on those who were most fitted to exercise it, in proportion to their fitness, contended for a principle which he believed to be capable of extension with the happiest result. While, however, he mainly advocated this on the ground of principle, he did also think that it carried with it some practical advantages. They could not afford to allow the most intelligent citizens of the town to abstain altogether from the elections. He believed the system of polling would be productive of great good as regarded the poorer class of voters; but he did apprehend that there would be great difficulty in getting the more busy and wealthy voters to go to the poll. If only the one vote was given to them, that difficulty would be enhanced; but if they were given more votes in accordance with the amount of rates and taxes which they paid, they would be more important factors in the elections, and it would be less difficult to induce them to go to the poll. Suppose, for instance, a man of business in this part of the town was asked to give his one vote at the poll; if he knew that his vote would count as one, he would think twice before he would go out of his way to give his one vote. But if he had to give six votes, he would feel that his vote was so important that he would submit to the sacrifice. As regards this number six, Sir Henry Harrison would draw attention to the fact that the maximum proposed extent of the plural vote was not 12 times that of the single vote, as might at first sight be supposed, but only six times as much. Six was the English limit, and therefore there appeared to be a precedent for taking six as the limit here. A vote in Calcutta had always meant a vote for each vacancy, and to take that away, and say that it should only mean a vote for one candidate in future, might seem like disfranchisement. Consequently the Committee thought it would be desirable to maintain the practice, that when two Commissioners were to be elected, each elector had a vote for each candidate, or he might give both his votes to one candidate. Hitherto the usual practice had been to give all the votes to one man. Still every elector understood that he had the power of dividing his votes, and perhaps 10 to 15 per cent. of the electors had actually done so. The Committee therefore thought it preferable to leave the existing practice as it was, and thus the plural vote meant so many additional votes rising in a scale not strictly proportional, but up to a maximum of six times the minimum when the property was valued at over Rs. 5,000 a year. There had just been a number of elections in Bengal, and he had noticed that the general complaint had been precisely the complaint that obtained in Calcutta, that the number of unintelligent voters was so large that the election went by all sorts of artifices, and that the intelligent voters abstained from going to the poll because they were swamped. This had been specially contended regarding the Burdwan elections by the *Sanjibani*, which in an article at the end of November argued strongly against the one-man-one-vote system as swamping the more intelligent voters, and allowing the illiterate, as being the larger number, to govern the election. For these reasons, he hoped the principle of the plural vote would commend itself to the Council, even if they thought it advisable to modify the details. With these remarks he begged to move that the preliminary report of the Committee be published.

His Honour the President said that the hon. member who had just spoken had really made two motions, one that the preliminary report of the Select Committee on the Bill should be published, which was one about which there could be no hesitation in the Council, and which His Honour believed was in the power of the President to sanction on his own motion; and the other, which was of a more novel character, was that, after giving due time for the consideration of the report before them, it should be taken into the consideration of the Council without reference to the fact that the final and complete report of the Select

Committee could not by that time be before them This was a matter in which His Honour placed himself entirely in the hands of the Council. If there was any opposition to the proposal, His Honour would not think it right to force it. If, on the other hand, there was no such opposition, he conceived they should all agree in looking at it as advantageous to make a commencement of what was likely to be a long and troublesome debate, as early as could be consistent with giving the public full time to consider the report If, therefore, there was no objection to the procedure on principle, His Honour proposed to give three weeks' time and take the report into consideration on the 28th instant. But, as he said, His Honour was entirely in the hands of the Council in the matter, and he should like to know whether any member had any objections to the proposal that the report be taken into consideration without reference to the fact that the report of the Committee on the other parts of the Bill could not by that time be complete. His Honour, not being on the Select Committee, could not speak with authority, but he had reason to believe that it would not be long after that time that the report would be complete.

The HON. BABU KALI NATH MITTER said he had one observation to make. He wished a full discussion to come on upon the Bill, and he thought it desirable that public opinion should be ascertained, in the first instance, before the discussion took place. The reason he rose to say a few words was this. He was one of those who had not signed the report, being entirely opposed to the principle adopted by the majority. The reasons which induced him to do so he craved leave to refer to on a future occasion when the matter would come up for full debate. He thought it advantageous to have this matter taken up before the other portions of the Bill were discussed, because these were important matters, and he doubted not they would take a long time to discuss fully. Therefore he would very much prefer the matter to be cleared up by discussion before the full report of the Select Committee came up before them.

The motion was put and agreed to.

The HON. SIR HENRY HARRISON also moved that the Hon. Mr. C. H. Moore and the Hon. Dr. Gooroo Das Banerjee be added to the Select Committee on the Bill to consolidate and amend the law relating to the Municipal affairs of the Town and Suburbs of Calcutta.

The motion was put and agreed to

The Council was adjourned to Saturday, the 28th January, 1888.

GORDON LEITH,
Offg. Assistant Secy. to the Govt. of Bengal,
Legislative Dept.

CALCUTTA;
The 10*th January*, 1888.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week-ending the 7th January 1888.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
BURDWAN DIVN.	1	Burdwan, Jan 7, '88	Nil	Several cloudy days, but weather not so cool as might be at this season of the year. Prospects of winter crops fair. In the Cutwa sub-division the rice harvest has been below the estimate.
	2	Bankoora „ 7, '88	Nil	Weather—seasonable. Threshing of *amun* rice continues. Sugarcane is being cut. Mustard, *soorgunja*, wheat, barley and pulses are coming on well. No change in the rice market.
	3	Beerbhoom „ 7, '88	0·16	The first portion of the week was characterised by cloudy and depressing weather. Rain fell on the 5th and the sky is now clear. The rain has been of service to the *rubbi* crops, but more is wanted.
	4	Midnapur „ 7, '88	Nil	Weather—cloudy. Reaping of crops nearly concluded. The rice harvest generally has been good.
	5	Hooghly „ 7, '88	Nil	Weather—cloudy. Winter rice harvest nearly over; estimated outturn about 8 annas on the average. Other crops doing well.
		Howrah „ 9, '88	Nil	Weather—clear and cold. Harvesting of *amun* and sugarcane continues.
		Central Districts.		
PRESIDENCY DIVN.	6	24-Perghs. Jan 10, '88	Nil	Weather—seasonable and cool. Prospects of winter crops satisfactory. Harvesting of *amun* paddy continues. Sugarcane is being cut.
	7	Nuddea „ 7, '88	Nil	Weather—cloudy. Harvesting of rice nearly completed.
	8	Khoolna „ 7, '88	Nil	Weather—seasonable. Harvesting of *amun* still continues. Winter crops doing well.
	9	Jessore „ 7, '88	Nil	Weather—cold and cloudy. Harvesting of *amun* crop still going on. Prospects good. Cold-weather crops doing well.
	10	Moorshedabad „ 7, '88	0·05	Weather—seasonable and cloudy. Harvesting of *amun* still continues. Sugarcane, wheat and other winter crops promising well.
RAJSHAHYE DIVN.	11	Dinagepur Jan. 7, '88	Nil	Weather—cold and cloudy. Winter rice is being reaped. Mustard and tobacco doing well.
	12	Rajshahye „ 7, '88	0·03	Weather—seasonable. Prospects good, except that a little rain is wanted for the cold-weather crops. Harvesting of *amun* paddy continues.
	13	Rungpur „ 7, '88	0·08	Weather—cloudy with light rain. Harvesting of *amun* nearly finished; outturn above the average. Crushing of sugarcane continues. Cold-weather crops doing well. Prices falling.
	14	Bogra „ 7, '88	Nil	Weather—seasonable. State and prospects of crops continue favourable.
	15	Pubna „ 7, '88	Nil	Weather—cloudy and cool. Prospects of crops good.
	16	Darjeeling „ 7, '88	0·14	Weather—fair. State and prospects of crops good, though more rain would be acceptable.
	17	Julpigoree „ 7, '88	Nil	Weather—cloudy at times. More than 12 annas of winter paddy have been harvested. *Kalai* is being gathered. *Rubbi* crops doing well, but a little rain would be beneficial. Prices stationary.
		Eastern Districts.		
DACCA DIVISION.	18	Dacca, Jan. 7, '88	Nil	Weather—cold and cloudy at intervals. Harvesting of *amun* paddy nearly completed. *Rubbi* crops doing well. Fodder is plentiful.
	19	Furreedpur „ 7, '88	Nil	Weather—seasonable; cloudy occasionally. Prospects and condition of crops satisfactory.
	20	Backergunge „ 5, '88	Nil	Weather—seasonable. Prospects of crops very good.
	21	Mymensingh „ 6, '88	Nil	Weather—cloudy and cold. State and prospects of all crops satisfactory.
CHITTAGONG DIVN.	22	Chittagong Jan. 10, '88	Nil	Weather—seasonable. Harvesting of *amun* nearly completed; outturn good. Winter crops progressing. Prices stationary.
	23	Noakholly „ 6, '88	Nil	Weather—seasonable; cloudy at times. Reaping of *amun* continues. *Rubbi* crops doing well.
	24	Tipperah „ 5, '87	Nil	Weather—cold and seasonable. There is nothing to complain of in respect of the crops.
	25	Chittagong Hill Tracts. „ 3, '88	Nil	Weather—very cold and heavy fogs up to 9 in the morning throughout the week. Harvesting of late plough-paddy still continues. Mustard and other cold-weather crops doing well.
		Hill Tipperah „ 4, '87	Nil	Weather—occasionally cloudy. Reaping of *amun* paddy nearly over. Cotton and *til* still being gathered. Prospects of tobacco, chillies and mustard fair.

	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.				
PATNA DIVN.	26	Patna Jan. 7, '88	0·01	Weather—cold and cloudy. Harvesting of paddy approaching completion; threshing in progress. Early poppy thriving. Prospects of *rubbi* still fair, but rain wanted. In the Barh sub-division insects have somewhat affected *rubbi*. Prices of food-grains, especially gram, wheat, and *khesari*, rising owing to export to up-country.
	27	Gya „ 7, '88	0·02	Weather—cold. Paddy is being reaped and threshed. *Rubbi* is suffering in some places from insects. Poppy coming on well.
	28	Shahabad „ 7, '88	0·02	Weather—cloudy for the greater part of the week; latterly cool and clear. Harvesting of rice completed. Prospects of *rubbi* and poppy continue hopeful, though it is feared that cloudy weather, without rain, may do some injury to the crops. A little rain at present will benefit both the *rubbi* and poppy crops.
	29	Durbhunga „ 7, '88	Nil	Weather—occasionally cloudy; west wind prevailing. Harvesting of rice nearly completed with excellent outturn. *Rubbi* continues promising, but wants rain. Mustard and peas in flower. Poppy looks well. Tobacco has begun to be harvested. Price of common rice averages 19 seers per rupee.
	30	Mozufferpur „ 7, '88	Nil	Weather—cold and cloudy during first-half of the week, since fair. Threshing of paddy nearly completed. Prospects of *rubbi* fair, but rain wanted. Weeding and watering of poppy progressing. This crop has suffered to some extent from drought and caterpillars in the unirrigated lands in the Sudder sub-division.
	31	Sarun „ 7, '88	Nil	Weather—fair and seasonable. Mornings occasionally cloudy and foggy. Prospects of *rubbi* and poppy continue good. *Rahar* excellent. A shower of rain will do much good.
	32	Chumparun „ 7, '88	Nil	Weather—cold and fair. Threshing of paddy approaching completion. *Rubbi* and poppy doing well. A shower of rain is needed.
BHAGULPORE DIVN.	33	Mongnyr Jan. 7, '88	0·01	Weather—cold and cloudy. Harvesting of winter rice nearly finished and threshing in progress; outturn below the average. Prospects of *rubbi* and poppy continue favourable but a shower of rain would do much good.
	34	Bhagulpur „ 7, '88	Nil	Weather cloudy and cold. Harvesting of winter rice nearly over. *Kalai kurthi*, and *tori* being reaped. Other *rubbi* crops require a shower of rain. Cloudy weather has not yet affected them to any appreciable extent.
	35	Purneah „ 7, '88	Nil	Weather—cool. Late rice nearly harvested. Winter crops doing well.
	36	Maldah „ 7, '88	Nil	Weather—cloudy; drizzling rain on the night of the 5th, Harvesting of winter rice still going on. *Kalai* and mustard also continue to be gathered Prospects of all cold-weather crops favourable. Common rice selling at an average of 23 seers per rupee.
	37	Sonthal Perghs. „ 7, '88	Nil	Weather—cloudy, but no rain has fallen. Paddy nearly harvested. Winter crops reported well, but a good and general shower is wanted.
ORISSA.				
ORISSA DIVN.	38	Cuttack Jan. 6, '88	Nil	Weather—cloudy at times. Reaping of *sarad* rice in progress and that of *rubbi* crops nearly completed. *Dalua* rice is being transplanted. Price of common rice almost unchanged.
	39	Pooree „ 5, '88	Nil	Weather—seasonable. *Sarad* rice is still being harvested. *Dalua* rice is thriving well. Common rice 25 seers 7 chittacks per rupee in the Sudder sub-division and 26 seers 15 chittacks in the Khoordah sub-division.
	40	Balasore „ 6, '88	Nil	Weather - cold and cloudy. Harvesting of *sarad* paddy is coming to an end. *Dalua* is growing *Rubbi* is ripening. Sugarcane is being pressed. Prospects of all crops continue favourable.
CHOTA NAGPORE.		*South-West Frontier Agency.*		
CHOTA NAGPORE DIVN.	41	Hazaribagh, Jan. 6, '88	0·26	Weather—cloudy; slight rain. Harvesting of paddy completed; outturn between 8 and 12 annas. Sugarcane is being cut and pressed; yield between 12 and 14 annas. *Rubbi* crops have suffered severely from want of rain. Poppy reported to be promising, but a little more rain would improve prospects. Stocks generally sufficient. Cattle-disease reported in some villages.
	42	Lohardugga „ 7, '88	0·59	Weather—cloudy. Rain during the week has much benefited the standing *rubbi* crops. No change in prices.
	43	Singbhoom „ 6, '88	0·06	Weather cloudy. Slight rain all over the district during the week. Cold-weather crops doing well.
	44	Manbhoom „ 7, '88	0·13	Weather—cold and clear. The rain has cleared away the clouds, and will do good. Prospects of sugarcane and *arhar* excellent; the former is expected to yield 16 to 18 annas. Rice sells at from 20 to 25 seers per rupee. Cattle-disease at Gohera.

Published for general information.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF DECEMBER 1887.

THE meteorology of the month of December in Bengal is usually very simple, the conditions being almost identical with those which obtain during the preceding month of November, the only difference being that the north-east monsoon conditions are present in their most complete form during this month and in January. The normal features of the month of December are therefore diminishing temperature, increasing pressure, considerable dryness of the air, an almost complete absence of cloud, the prevalence of a light northerly wind current, and usually absence of rain during the greater part or almost the whole of the month.

These normal conditions may, however, be disturbed by two classes of actions—the first class of disturbances are those which are formed in Upper India and consist of shallow barometric depressions which, after their formation, drift slowly in a south-easterly or easterly direction, and usually enter Behar, and sometimes even drift over the whole of Bengal, filling up in their advance. They usually almost reverse the weather conditions in Bengal, giving heavily clouded skies, an increased night and diminished day temperature, a considerably increased humidity, and a diminished pressure, and when the disturbance is considerable, general light rain is received. It is from this class of disturbances that practically the whole of the rainfall of December in Bengal is received, but when such a disturbance disappears, the cold-weather conditions usually set in with increased intensity, and fine dry weather with unusually low temperature then obtains. The second class of disturbances are brought about by the formation of cyclonic storms in the Bay of Bengal, but usually in December such storms, if they form, are generated in the extreme south of the Bay, and it is very rarely that they are sufficiently intense to affect the weather in Bengal to any considerable extent.

The average rainfall in Bengal in December is therefore small in all districts. The normal fall in Orissa is equal to about six-tenths of an inch, in East Bengal, it is equal to about four-tenths, and in Chutia Nagpur and South-West Bengal to about three-tenths while over the remainder of the province the fall is between one and two-tenths only.

Meteorology of the month.—The chief features in the meteorology of December have been—

1. Slight excess pressure over the greater part of the province, the excess being largest in the northern districts and comparatively small at the southern stations.
2. An almost normal average temperature over the whole province, though slight defects have been shown in South-West and East Bengal, North Behar and Assam, and slight excess temperatures elsewhere.
3. Decided dryness of the air.
4. Cloud proportion considerably below the normal.
5. An almost complete absence of the two classes of disturbances noticed under the description of the normal meteorology of the month; and
6. An almost entire absence of rainfall over the whole province.

The weather conditions over the whole of Bengal during December have been extremely simple, and call for little or no comment. The normal north-east monsoon conditions have been present almost uninterruptedly throughout the month. A fairly strong and steady northerly wind current has blown over the province. Skies have been almost cloudless, humidity and temperatures have been low, and pressure has been high, and there have been no disturbances either over Upper India or in the Bay of Bengal to influence the weather conditions in Bengal. The only time during the month when the normal weather conditions were at all altered was during the existence of slight disturbance over the Central Provinces, which brought rain to that area on the 27th and 28th instant, and about this time also skies began to cloud over in Bengal. These slightly disturbed conditions in Bengal, which commenced from about the 25th of the month, may also have been connected with the formation of a diffused cyclonic storm in the Arabian Sea towards the end of the month, which disturbance subsequently influenced the weather on the west coast of India. The disturbed conditions in Bengal were, however, not sufficiently developed to do more than give one or two light showers at some of the western stations, and thus rainfall was practically absent from Bengal for the whole of the month.

Pressure.—The variations of pressure throughout the month have generally been small and of the usual oscillatory character noticeable during fine settled weather. Taking into consideration only those stations from which pressure records have been received for a series of years, and which therefore yield reliable averages, the mean pressure of the whole Province of Bengal for December has been 0·011 inch in excess of the normal. The excess has been most strongly marked in the northern districts, and at Durbhanga the excess has been 0·026 inch, and at Purneah 0·024 inch On the other hand, at such stations as False Point and Saugor Island, the average pressure has been almost absolutely normal. In Assam the mean pressure for the month has been below the normal by small amounts, the defects at Dhubri and Silchar having equalled about 0·01 inch, while at Sibsagar pressure has been normal.

Temperature.—The mean temperature of the whole Province of Bengal during December has scarcely varied from the normal, the variation not amounting to more than a tenth of a degree. In Assam, on the other hand, temperature has been below the normal by seven-tenths of a degree. The oscillations of temperature during the month have also been of little importance, though at its commencement temperature was rather considerably above the normal, but the excess was soon neutralized, and for the last three weeks the average temperature was almost normal.

The general variation of temperature from the normal during the month is best shown by the following table, where the temperature data at nine typical stations in different districts in the province are given, the numbers shown being the weekly variations of the maximum, minimum and mean temperatures at each station from the normal values:—

Monthly variation table of temperature from the weekly comparison table during December 1887.

	Week ending 2nd December 1887.			Week ending 9th December 1887.			Week ending 16th December 1887.			Week ending 23rd December 1887.			Week ending 30th December 1887.

The largest variations appear to have been in parts of Behar, where in the Patna and Shahabad districts the mean temperatures for the month have been from 1° to 2° above the normal.

Rainfall—As above stated, has been practically absent from the province throughout the whole month, but owing to the slightly disturbed conditions existing in the latter end of the month, one or two stations reported a few drops of rain, but the amounts were of no practical importance. The only reporting stations which have thus reported rain have been Dhurmsalli in the Cuttack district and Midnapore.

The following table gives in a condensed form the summary of the rainfall information in Bengal for the whole year. It gives a comparison between the actual monthly and total rainfall of the year with the normal falls in each of the seven large meteorological divisions of Bengal, the actual falls being expressed as percentages of the normal amounts. From these figures, it will be seen that the falls for the year in Behar and North Bengal have been about equal to the normal, those in Chutia Nagpur and South-West Bengal have been about 10 per cent. below the normal, and those in Orissa and East Bengal about 20 per cent. below it:—

Table showing the average district rainfall of 1887 compared with the normal and expressed as a percentage of that amount.

Meteorological Divisions.	January.	February.	March.	April.	May.	June.	July.	August.	September.	October	November.	December.	Actual rainfall of first twelve months expressed as a percentage of the normal fall for the period.

Meteorological Office, Bengal ;
The 10*th January* 1888.

Alexander Pedler,
Offg. Meteorological Reporter to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of December 1887.

	Inches.	Date.	Hour.
The mean pressure of the month	30·021		
The average pressure of December from 24 years' registers ...	30·027		
The highest pressure in the month	30·150	7th	10h.
The lowest pressure in the month	29·878	20th	16h.
The range of pressure	0·272		
	Hours.		
The total number of hours of bright sunshine during the month	256·6		
The maximum possible number of hours of sunshine ...	332·8		
	⊖		
The mean temperature of the month	64·7		
The average temperature of December from 24 years' registers	68·0		
The highest temperature in the month	78·8	1st	
The lowest temperature in the month	51·3	30th	
The range of temperature during the month	27·5		
The mean daily range of temperature	20·0		
The greatest range of temperature in one day	24·4	29th & 30th	
	Per cent.		
The mean humidity of the month	69		
The average humidity of December from 24 years' registers ...	71		
	Inches.		
The mean vapour tension of the month	0·410		
The average vapour tension of December from 9 years' registers	0·476		
The mean cloud proportion of the month .	1·47		
The average cloud proportion of December from 10 years' registers	1·85		
	Inches.		
The total rainfall of the month	Nil.		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	Nil.		
The average fall of December from 48 years' registers ...	0·23		
The greatest fall in 24 hours	Nil.		
	Days.		
The number of rainy days in the month	Nil.		
The average number of rainy days in December from 24 years' registers	1		
	⊖		
The mean maximum equilibrium temperature of solar radiation during the month	127·7		
The mean difference of sun and air temperatures	51·6		
The greatest sun temperature	132·5	3rd	
The greatest excess of sun over air temperature	58·2	27th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	45·1		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	11·0		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	13·5	21st	
	Miles.		
The mean movement of the wind per day	58·0		
The greatest movement of the wind in one day	99·0	2nd	
The greatest movement of the wind in one hour	12·0	16th, 11 to noon.	

The number of hours with winds from each of the 8 points—

N. 360, NE. 64. E. SE. S. SW. W. 12, NW. 123, Calm 185.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 2·3° lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

JOHN ELIOT,
Offg. Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 9th January 1888.

Meteorological Report of the Province of Benga

* Mean for six days. † Means for [illegible] days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last te[illegible] The *humidity* of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The numbe[illegible] are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past [illegible] station in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 6th of January 1888

Average humidity at 10 A.M.	Average cloud amount at 10 A.M. for week.	Rainfall of week at observing station.	Of week: Mean for district.	Of week: Normal mean.	District observations. Rainfall. Since 1st of December: Mean for district.	Since 1st of December: Normal mean.	Since 1st of December: Variation.	Since 15th May 1887: Mean for district.	Since 15th May 1887: Normal mean.	Since 15th May 1887: Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—...... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 10*th January* 1888.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 6TH OF JANUARY 1888.

TOWARDS the middle of the previous week conditions had become slightly disturbed in Bengal, but after a few days' cloudy weather, the skies had cleared rather rapidly, and ordinary settled north-east monsoon weather obtained. At the commencement of the present week, however, skies again began to cloud over in Bengal, and particularly at the Chutia Nagpur stations and at some in South-West Bengal the sky became almost overcast. There do not appear to have been any particularly abnormal conditions over Bengal or over Upper India to account for this disturbed condition of the weather in Bengal, and, so far as can be seen, the altered conditions must have been brought about by the gradual formation of a diffused barometric depression or cyclonic storm off the Bombay Coast, which reached Bombay about the 5th instant. Practically for the whole of the week under review the normal north-east monsoon conditions in Bengal have been either partially or in a few instances almost wholly thus reversed. In Chutia Nagpur the sky has been overcast for nearly the whole of the week, while over the greater part of the province the skies have been heavily clouded. The northerly wind current fell off in force, and light and rather variable winds have been reported. The pressure variations have been rather larger than usual and somewhat irregular, and on the whole pressure has been unusually high. The night temperatures also rose very considerably, and became considerably above the normal, though the day temperatures were still low. Humidity also increased considerably. Light rain has also been reported at many stations in Chutia Nagpur, and in some cases on two and three days, while light rain showers have also been received in South-West Bengal, North Bengal, and South Behar. The weather conditions in Bengal, therefore, have been more or less disturbed throughout the week.

Pressure.—As has been already stated, the variations of pressure during the week have been rather large. Up till the 1st instant the variations do not call for notice, but on the 2nd instant there was a rather rapid general rise amounting to nearly a twentieth of an inch; this was succeeded by a moderate fall on the 3rd, and on the 4th a sharp increase took place generally exceeding 0·06 inch, but on the 5th and 6th the changes were smaller and rather irregular. For the whole week, taking into consideration only those stations which have submitted observations for a series of years, and which therefore yield reliable averages, the mean pressure of the province has been 0·072 inch in excess of the normal. At some of the central stations, such as Berhampore, an average excess pressure of no less than a tenth of an inch has been reported. Some of the actual pressures recorded during the week have been exceptionally high, particularly during the last three days of the week.

Temperature—The mean temperature of the week in nearly all districts has been largely in excess of the normal. For the whole province the excess has been 2°, but in Orissa it has been no less than 4°. As stated in the general summary, the day temperatures have remained rather low, while the increase has taken place almost entirely in the night or minimum temperatures, and at most stations the day temperatures have been below the normal, while the minimum temperatures have been largely in excess. This is shown in the following table, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are given, and compared with the normal for the same period. It will be seen that the average of the maximum or day temperatures at these nine stations was 0·09° in defect of the normal, while the average of the night or minimum temperatures has been no less than 3·3° in excess of the normal.

Rainfall—Has been entirely absent throughout the week in Orissa, East Bengal and North Behar; in South-West Bengal a few showers fell on the 5th and 6th in the Moorshedabad district, and at two or three other stations, such as Raneegunge, Khatra and Beerbhoom Sorry; in North Bengal a few light showers fell in the Cooch Behar, Darjeeling and Rungpore districts; and in South Behar light rain showers were received in the following districts:—Gya, Patna, Monghyr, South Bhagulpore and Sonthal Pergunnahs. The most general rainfall was received in Chutia Nagpur, where the majority of stations reported rain, in some cases commencing from the 4th instant. In this division the average fall has equalled 0·26 inch, but in all other divisions the falls have been so small that they have averaged only a few hundredths of an inch.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending 6th January 1888.

	Normal mean maximum temperature for the week ending 6th January 1888.	Actual mean maximum temperature for the week ending 6th January 1888.	Excess or defect of the actual from the normal mean.	Normal mean minimum temperature for the week ending 6th January 1888.	Actual mean minimum temperature for the week ending 6th January 1888.	Excess or defect of the actual from the normal mean.	Normal mean daily temperature for the week ending 6th January 1888.	Actual mean daily temperature for the week ending 6th January 1888.	Excess or defect of the actual from the normal mean.

The average fall of the corresponding period for 24 years, S. G.'s Office ...	0·04

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain gauge is one foot above the ground.

o overcast, g gloomy, ⩍ dew.

JOHN ELIOT,
Offg. Meteorological Reporter to the Govt of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 9th January 1888.

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
The 9th January 1888.

JOHN ELIOT,
Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

DURING the week ending 17th December 1887, births and deaths were recorded in the principal Municipalities in Bengal at the rates, respectively, of 26·6 and 36·5 per 1,000 of population, against 25·9 and 33·4 per 1,000 during the preceding week ending 10th December, showing a large increase in the registration of deaths

2. The highest proportions of births and deaths were furnished by the following Municipalities:—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Narainganj	49·7	Suburbs of Calcutta	68·5
Utterpara	47·2	Utterpara	66·1
Serampore	47·1	Purneah	62·2
Arrah	46·7	Serampore	60·9
Monghyr	44·3	Durbhanga	59·8
Beauleah	39·4	Beauleah	55·2
Durbhanga	38·5	Kishnagar	51·2
Puri	35·6	Hughli	51·0
Gya	33·5	Puri	44·1
Kishnagar	32·2	Comillah	38·5
Hughli	30·9	Gya	37·6
Comillah	30·8	Narainganj	37·2
Bhagulpore	29·9	Bhagulpore	34·4

3. The principal death-causes, specified in the appended table, proved fatal at the rates exhibited below:—

	Ratio per *mille* during the weeks ending—	
	17th Dec. 1887.	10th Dec. 1887.
Cholera	5·5	4·2
Small-pox	·03	·3
Fever	15·6	13·1
Bowel-complaints	6·0	5·5
Injury	·4	·4
Other causes	8·9	9·9

indicating that, in comparison with the preceding week, there was a noticeable increase of mortality from cholera and fever with a sensible decline in that from the diseases coming under the head of "Other causes."

4. While no Municipality suffered much from small-pox or presented a large number of casualties from injury, the following returned conspicuously high death-rates from the other diseases specified in the above table:—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Bowel-complaints.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Durbhanga ...	26·8	Kishnagar ...	49·2	Utterpara ...	47·2	Comillah ...	23·1
Suburbs of Calcutta	15·3	Purneah ...	48·5	Serampore ...	19·6	Narainganj ...	20·7
Howrah ...	4·6	Beauleah ...	47·3	Hughli ...	13·4	Suburbs of Calcutta ...	18·0
Patna ...	3·6	Hughli ...	34·9	Suburbs of Calcutta	11·6	Gya ...	17·1
Bhagulpore ...	3·6	Serampore ...	23·5	Durbhanga ...	11·0	Puri ...	16·8
		Suburbs of Calcutta	23·2	Midnapore ...	10·8	Serampore ...	15·7
		Burdwan ...	22·9				
		Puri	21·0				

5. Distributed under the heads of *Sex*, *Class* and *Age*, the mortality of the week under review stood as follows:—

According to Sex.

	Ratio per *mille.*
Males	35·9
Females	37·3
Ratio of male deaths to every 100 female deaths ...	109

According to Class.

	Ratio per *mille.*
Christians	17·4
Hindus	35·9
Mahomedans ...	38·9
Budhists	24.2

According to Age.

	Ratio per *mille.*
Under 1 year ...	259·0
1 and under 5 years ...	49·8
5 „ 10 „ ...	24·2
10 „ 15 „ ...	16·7
15 „ 20 „ ...	21·9
20 „ 30 „ ...	20·7
30 „ 40 „ ...	26·0
40 „ 50 „ ...	34·1
50 „ 60 „ ...	38·2
60 years and upwards ...	87·9

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

The 6th January 1888.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 17th December 1887

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remain as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table except 'Age,' the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to, cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

Districts.	Names of Municipalities.	Class: Deaths among—Christians.	Class: Deaths among—Hindus.	Class: Deaths among—Mahomedans.	Class: Deaths among—Buddhists.	Class: Deaths among—Other classes.	Class: Ratio per 1,000 of population per annum—Christians.	Class: Ratio per 1,000—Hindus.	Class: Ratio per 1,000—Mahomedans.	Class: Ratio per 1,000—Buddhists.	Class: Ratio per 1,000—Other classes.	Age: Deaths—Under 1 year.	Age: Deaths—1 and under 5 years.	Age: Deaths—5 and under 10 years.	Age: Deaths—10 and under 15 years.	Age: Deaths—15 and under 20 years.	Age: Deaths—20 and under 30 years.	Age: Deaths—30 and under 40 years.	Age: Deaths—40 and under 50 years.	Age: Deaths—50 and under 60 years.	Age: Deaths—60 years and upwards.	Age: Ratio per 1,000 of population per annum—Under 1 year.	Age: Ratio—1 and under 5 years.	Age: Ratio—5 and under 10 years.	Age: Ratio—10 and under 15 years.	Age: Ratio—15 and under 20 years.	Age: Ratio—20 and under 30 years.	Age: Ratio—30 and under 40 years.	Age: Ratio—40 and under 50 years.	Age: Ratio—50 and under 60 years.	Age: Ratio—60 years and upwards.

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT.

GENERAL—ROAD CESS.

Dated Calcutta, the 10th January 1888.

No. 93R.C.

READ—

Letter from the Accountant-General, Bengal, No. 857L.F., dated 21st December 1887, submitting an abstract of the receipts and expenditure of the several District Road Committees in Bengal for the quarter ending the 30th June 1887.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees for the first quarter of the year 1887-88 be published in the *Calcutta Gazette*, and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette*.

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded to the Commissioners of the Rajshahye, Bhagulpore, Chittagong and Chota Nagpore Divisions; to the Superintending Engineers of the Eastern and Western Circles; and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

W. B. BESTIC,

Under-Secy. to the Govt. of Bengal,

P. W. Dept.

J. F. FINLAY,

Offg. Accountant-General, Bengal.

The 16th January 1888.—The following papers are published for general information.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,
Secretary to the Govt. of Bengal.

IMPERIAL INSTITUTE, LONDON.

Cir. No. 2—2-1M. & Ex., dated Calcutta, the 6th January 1888.

From—W. R. LAWRENCE, ESQ., C.S., Under-Secy. to the Govt. of India, Revenue and Agricultural Department,

To—The Secretary to the Government of Bengal, Revenue Department.

I AM directed to forward, for the information of His Honour the Lieutenant-Governor, and for any action that may be deemed necessary, a copy of a letter dated the 14th October 1887, received from Sir F. Abel, in connection with the Imperial Institute.

The memorandum referred to in paragraph 1 of the letter has not been received.

Dated London, W. C., the 14th October 1887.

From—SIR F. A. ABEL, Organizing Secretary, Imperial Institute of the United Kingdom, the Colonies and India.

To—HIS EXCELLENCY THE RIGHT HON'BLE THE EARL OF DUFFERIN, K.P., G.C.B., G.C.M.G., G.M.S.I., Governor-General of India.

I HAVE the pleasure, by direction of His Royal Highness the Prince of Wales, to enclose a memorandum descriptive of the progress which has been made to date in the establishment of the Imperial Institute, as His Royal Highness believes that the information which it contains will be of interest to Your Lordship and to the Committee which has acted under your directions during the present year in obtaining contributions to the funds of the Institute.

2. The large measure of success which has attended the efforts of the various Local Committees throughout the country has been very gratifying to the Prince, and I have the instructions of His Royal Highness to request that you will be good enough to convey to the individual members of your Committee the expression of His Royal Highness's high appreciation of their hearty co-operation in his desire to found a fitting National Memorial of the Jubilee of the Queen's reign.

3. The very satisfactory progress which has been made, during the first nine months of organized work, towards ensuring the foundation of the Institute upon such a basis as to allow of the extension of its sphere of usefulness in all the contemplated directions, warrants the sanguine expectation that the amount which has been estimated as necessary for that purpose will be provided within no very distant period.

4. A considerable number of Local Committees have signified their willingness to prolong their operations with the especial object of obtaining additions to the "Endowment Fund" of the Institute which is about to be created. His Royal Highness trusts that it may be possible for you and your colleagues to adopt this course.

5. Should you or your Committee desire any further information which it is in my power to afford, I shall be happy to reply to enquiries or to arrange for the personal attendance of an official upon you or the Committee.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 14*th January* 1888.

No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.			
	Western Districts.		
	Burdwan Divn.		
1	Burdwan, Jan 14, '88	Nil	Weather—seasonable. Prospects of *rubbi* crops fair. Prices stationary.
2	Bankoora ,, 14, '88	Nil	Weather—seasonable. Threshing of *amun* rice still continues. Sugarcane is being gathered. Wheat, barley and gram are thriving. Mustard and peas are flowering and promise an average outturn. No change in the rice market.
3	Beerbhoom ,, 14, '88	Nil	Weather—seasonable. Threshing of paddy continues. Prospect of *rubbi* good. Prices stationary.
4	Midnapur ,, 14, '88	Nil	Weather—cool. *Rubbi* doing well except in thanas Binpur and Jhargram.
5	Hooghly ,, 14, '88	Nil	Weather—cold. Winter rice harvest completed; outturn from eight to ten annas. Sugarcane pressing commenced; good outturn. Spring crops doing well.
	Howrah ,, 16, '88	Nil	Weather—clear and cold. Harvesting of *amun* and sugarcane continues.
	Central Districts.		
	Presidency Divn.		
6	24-Perghs. Jan 17, '88	Nil	Weather—seasonable Harvesting of *amun* rice going on. Prospects of cold-weather crops favourable.
7	Nuddea ,, 14, '88	Nil	Weather—seasonable. Harvesting of *amun* over. Sugarcane thriving. *Rubbi* doing well. Rain wanted.
8	Khoolna ,, 14, '88	Nil	Weather—seasonable. Harvesting of *amun* still continues. Winter crops doing well.
9	Jessore ,, 14, '88	Nil	Weather—seasonable. Harvesting of *amun* crop almost completed; outturn good.
10	Moorshedabad ,, 14, '88	Nil	Weather—seasonable. Harvesting of *amun* continues; outturn good. *Rubbi* crops promising well.
	Rajshahye Divn.		
11	Dinagepur	...	Report not received.
12	Rajshahye Jan. 14, '88	Nil	Weather—seasonable. Harvesting of *amun* paddy approaching completion. Cold-weather crops doing fairly well.
13	Rungpur ,, 14, '88	Nil	*Amun* nearly harvested. Winter crops promising well on the whole.
14	Bogra ,, 14, '88	Nil	Weather—seasonable. State and prospects of crops continue good. Sugarcane is being cut. Prospects of cold-weather crops promise well.
15	Pubna ,, 14, '88	Nil	Weather—fine and cool. Prospects of crops good. Outturn of cold-weather crops expected to be 16 annas.
16	Darjeeling ,, 14, '88	Nil	Weather—fine. State and prospects of crops good.
17	Julpigoree ,, 14, '88	Nil	Weather—seasonably cold. Fogs in the morning for the last three days of the week. Harvesting of winter paddy in progress. Sugarcane is being cut and pressed in places. Early potatoes are being gathered. Prospects of crops continue favourable. Prices nearly stationary.
	Eastern Districts.		
	Dacca Division.		
18	Dacca, Jan. 14, '88	Nil	Weather—seasonable. *Rubbi* crops doing well. Most of the waste lands in Naraingunge sub-division have been taken up for cultivation. Sugarcane is being cut.
19	Furreedpur ,, 14, '88	Nil	Weather—seasonable. Prospects of crops good.
20	Backergunge ,, 13, '88	Nil	Weather—seasonable. Prospects of crops excellent.
21	Mymensingh ,, 13, '88	Nil	Weather—seasonable. State and prospects of standing crops satisfactory.
	Chittagong Divn.		
22	Chittagong Jan. 17, '88	Nil	Weather—seasonable. Harvesting of *amun* completed; outturn 12 annas. Prospects of other crops good. Prices steady.
23	Noakholly ,, 13, '88	Nil	Weather—seasonable. Reaping of *amun* continues. *Rubbi* crops doing well.
24	Tipperah ,, 12, '87	Nil	Weather—dry and cold. *Amun* paddy reaped with very good outturn generally. Winter crops coming on well; a little rain wanted in parts.
25	Chittagong Hill Tracts. ,, 10, '88	Nil	Weather—very cold, and heavy fogs up to 10 in the morning throughout the week; somewhat warmer during last two days, from about noon to 2 P.M. Harvesting of plough-paddy is finished. Mustard and other cold-weather crops doing well.
	Hill Tipperah ,, 11, '87	Nil	Weather—seasonably cold. *Amun* paddy completely harvested; outturn good. Tobacco, sugarcane, chillies and mustard doing well.

No	District and date of return.		Rainfall at Sudder Station in inches	Character of the weather and state and prospects of the crops.
BEHAR.				
Patna Divn.				
26	Patna	Jan. 14, '88	Nil	Weather very cold and seasonable. Harvesting of paddy completed. Threshing going on. Prospects of *rubbi* and poppy continue good, but rain wanted. Prices of food-grains rising owing to export to up-country.
27	Gya	" 14, '88	Nil	Weather—cold. Harvesting of paddy nearly finished. It is being threshed. *Rubbi* no more injured by insects. Poppy coming on well.
28	Shahabad	" 14, '88	Nil	Weather—cool and fine. *Rubbi* crops doing well, but rain wanted. Weather most favourable for poppy. The crop is looking well with every prospect of a good season.
29	Durbhunga	" 14, '88	Nil	Weather—very cold. Rice harvest completed. Prospects of *rubbi* and poppy continue hopeful. A little rain will benefit them. Tobacco is being harvested. *Rahar* and peas in flower. Price of common rice averages 19 seers per rupee.
30	Mozufferpur	" 14, '88	Nil	Weather—very cold Prospects of *rubbi* and poppy fair, but rain wanted. Early poppy coming into flower.
31	Sarun	" 14, '88	Nil	Weather seasonable. Prospects of crops continue good.
32	Chumparun	" 14, '88	Nil	Weather—cold; occasionally a little cloudy, but often foggy. Threshing of paddy almost completed in all parts. Poppy nearly in flower in some villages in the Sudder sub-division; in Bettiah it is being weeded and watered on irrigated lands. *Rubbi* has begun to flower in places. A shower of rain will be beneficial to both poppy and *rubbi*. *Arhar* is a very good crop.
Bhagulpore Divn.				
33	Monghyr	Jan. 14, '88	Nil	Weather—very cold; cloudy at times. *Rubbi* and poppy crops continue to promise well.
34	Bhagulpur	" 14, '88	Nil	Weather—seasonable. Harvesting of winter rice nearly over. *Rubbi* crops promise well, but rain wanted. Mustard being gathered. Sugarcane has commenced to be cut.
	Banka	...	0·21	
35	Purneah	" 14, '8·	Nil	Weather—clear and cold. *Aghani* rice nearly harvested. Winter crops doing well.
36	Maldah	" 14 '88	Nil	Weather—seasonable. The harvest of winter rice, *kalai*, &c., is still going on with good outturn. Wheat and other crops are growing well, but some rain would do good. Common rice selling at an average of 23½ seers per rupee.
37	Sonthal Perghs.	" 14, 88	Nil	Weather—seasonable. Rice crop harvested. Prospects of *rubbi* crops continue fair, except in Rajmehal, where rain is badly wanted. Rain is generally wanted. Sugarcane is being cut in places.
	Deoghur		0·03	
	Godda		0·06	
	Pakor	...	0·08	
ORISSA.				
Orissa Divn.				
38	Cuttack	Jan. 13, '88	Nil	Weather—seasonable. *Sarad* rice is being reaped with fair outturn. *Dalua* is being transplanted and growing well. Common rice 18½ seers per rupee in town.
39	Pooree	" 12, '88	Nil	Weather—seasonable. *Sarad* rice is still being harvested. *Dalua* crop thriving well. Common rice 25 seers 6 chittacks in the Sudder sub-division and 26 seers 6 chittacks in the Khoorda sub-division.
40	Balasore	" 13, '88	Nil	Weather—bright and cool. Harvesting of *sarad* rice coming to an end. *Dalua* rice growing well. *Rubbi* crops ripening. Sugarcane is being pressed. Prospects of all crops good.
CHOTA NAGPORE.				
South-West Frontier Agency.				
Chota Nagpore Divn.				
41	Hazaribagh.	Jan. 13, '88	Nil	Weather—seasonable. Recent rain has done much good. Prospects of *rubbi* and poppy have greatly improved. Poppy flowering. Harvesting of sugarcane continues with good outturn.
42	Lohardugga	" 14, '88	0·01	Weather—seasonable and clear. Rain has much improved *rubbi* crops. Prices as before. Cattle-disease reported.
	Palamow	...	0·80	
43	Singbhoom	" 13, '88	Nil	Weather—bright and cold. Want of rain for the *rubbi* crop is felt throughout the district. Sugarcane is being reaped and a 12-anna outturn is expected. *Rubbi* will yield very little owing to want of rain.
44	Manbhoom	" 14, 88	Nil	Weather—fair and cold. *Arhar* being gathered. Sugar-making has commenced; a good yield expected. Molasses and treacle selling at 8 to 10 seers per rupee. Prospects of wheat and barley fair, but of mustard indifferent. Rice selling at 20 to 24 seers per rupee.

The total fall from 1st to 14th January 1888	Nil.
The average fall of the corresponding period for 24 years, S. G.'s Office	0·11

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph. and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

≡ fog, , ⌓ dew.

* Means for six days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ... A clear sky is denoted by 0 and an overcast sky by 10. The ...
The *humidity* of the atmosphere is expressed as percentage, saturated air being represented by 100. ... by the sub-divisional station for the period in question during the ...
... are the numerical means or average of the rainfall in that district determined from the returns sent in by the ... station in the district sending in returns divided by the number of stations. A rainy day is one on which at least one hundredth of an inch fell.

for the week ending Friday, the 13th of January 1888.

Average humidity at 10 A.M.	Average cloud amount at 10 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1887. Mean for district.*	Since 15th May 1887. Normal mean.	Since 15th May 1887. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District	Meteorological Divisions.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left lank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 17*th January* 1888.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 13TH OF JANUARY 1888.

The weather throughout the province during the past week has been uniformly fine, with clear skies and light cool northerly or westerly winds. The barometer was unusually high at the commencement of the week, and fell steadily until the end of the week. Last week's report showed that it had risen equally steadily during the previous week. The barometric changes of the past fortnight have hence been due to a prolonged oscillation, and were probably produced by a slow vertical oscillatory movement in the atmosphere of the same period. As the total barometric change was as large at Darjeeling as in the plains of Bengal, the atmospheric movement must have extended to a very considerable elevation. It frequently happens that the last day or two of a period of falling barometer in the cold weather is accompanied with, or followed by, the formation of cloud and by increasing temperature. The present has been a partial exception, as skies were cloudless over the plains throughout the week, although they clouded over at Darjeeling on Friday. Temperature also decreased in Bengal, but rose slightly in Behar and Chutia Nagpur, and also considerably at Darjeeling.

Barometer.—Pressure decreased steadily from the beginning to the end of the week. The total fall averaged ·15″ in Orissa, ·18″ in Bengal, ·22″ in Behar, ·23″ in Chutia Nagpur, and was ·19″ at Darjeeling. Notwithstanding this large fall, the mean pressure of the week was above the normal by amounts which varied considerably, but which averaged ·05″ for the Province.

Temperature—Diminished during the week in Orissa and Bengal. The largest decrease occurred at the stations of Calcutta and Jessore, at which the mean daily temperature at the end of the week was 5° lower than at the beginning of the week. The decrease in Orissa and Bengal averaged 3°. It increased on the other hand at Darjeeling (4°) and also slightly (from 1° to 3°, in Behar and Chutia Nagpur. The lowest night temperatures during the week were registered at Motihari (40·1°) and Arrah and Buxar (43·9°), and the highest day temperatures at Commilla (83·4°) and Cuttack (82·8). The mean temperature was below the average in Chutia Nagpur (3°), South Behar and Orissa (1½°), and South-West Bengal (½°), and above it in East Bengal (2°) and North Bengal (1½°). As is generally the case in periods of diminished temperature in the cold weather, the effect was more strongly shown in the night than the day temperatures.

Winds—Blew steadily during the week from their ordinary cold-weather directions. They decreased in force during the week, and were very light and feeble on Friday.

Humidity and rain.—The humidity of the air varied little during the week. There was a slight increase on the last day or two, chiefly in North Bengal and Behar. Skies were cloudless throughout the month in the plains, and no rain fell in either the plains or hill districts of Bengal.

Table shewing the excess or defect of the actual temperature from the normal for the week ending 13th January 1888.

	Normal mean maximum temperature for the week ending 13th January.	Actual mean maximum temperature for the week ending 13th January 1888.	Variation of the actual from the normal mean.	Normal mean minimum temperature for the week ending 13th January.	Actual mean minimum temperature for the week ending 13th January 1888.	Variation of the actual from the normal mean. The mean relative humidity	63
	Inches.
The total fall of rain from 8th to 14th January 1888	Nil.

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

Meteorological Office, India ; John Eliot,

The 16th January 1888. *Offg. Meteorological Reporter to the Govt. of India.*

MEMORANDUM.

During the week ending 24th December 1887, the returns of the principal Municipalities in Bengal disclose the following particulars:—

1. That births and deaths were registered in those Municipalities at the rates, respectively, of 23 and 29·5 per 1,000 of population as opposed to 26·6 and 36·5 per 1,000, respectively, during the preceding week ending 17th December, indicating a considerable reduction in the registration of both.

2. That the following Municipalities returned the highest proportions of births and deaths:—

Births.	Ratio per mille.	*Deaths.*	Ratio per mille.
Narainganj	49 7	Beauleah	76·2
Monghyr	44·3	Suburbs of Calcutta	62 6
Beauleah	42·0	Purneah	48 5
Utterpara	37 8	Durbhanga	41·1
Seramporo	37·3	Narainganj	41·4
Durbhanga	36 4	Serampore	41 2
Howrah	32 1	Kishnagar	37 9
Arrah	29·9	Utterpara	37 8

3. That the principal diseases specified in the following table proved fatal at the rates exhibited below:—

	Ratio per mille during the weeks ending— 24th Dec. 1887.	17th Dec. 1887.
Cholera	4 0	5·5
Small-pox	·1	·03
Fever	12·1	15·6
Bowel-complaints	5·5	6·0
Injury	·2	·4
Other causes	7 6	8 9

indicating, in comparison with the outcome of the preceding week ending 17th December, a noticeable decrease in the death-rates from cholera, fever and the maladies classed under the head of "Other causes," and no material differences in the fatal results from the other diseases.

4. That while bowel-complaints proved fatal only in Suburban Municipality at the high rate of 14 1 per 1,000 of population, and the deaths from small-pox and violence were nowhere noticeably large, the other diseases enumerated above caused the highest mortality in the towns mentioned below:—

Cholera.	Ratio per mille.	*Fever.*	Ratio per mille.	*Other causes.*	Ratio per mille.
Narainganj ...	16·6	Beauleah ...	63·1	Serampore	19·6
Durbhanga ..	12 6	Purneah ...	45 0	Suburbs of Calcutta ...	16 7
Suburbs of Calcutta ...	10 9	Kishnagar ...	30 3	Puri ...	12·6
Bhagulpore ..	10 9	Suburbs of Calcutta ...	20 5	Beauleah	10 4
Howrah ..	2 3				

5. That the death-rates in relation to *Sex*, *Class* and *Age*, were returned at the rates indicated below:—

According to Sex.	Ratio per mille	*According to Class.*	Ratio per mille.	*According to Age.*	Ratio per mille.
Males	31·2	Christians	39·1	Under 1 year ...	169 8
Females	27 5	Hindus	30·4	1 and under 5 years ...	43·6
Ratio of male deaths to every 100 female deaths ...	128	Mahomedans ...	27 2	5 " 10 " ...	19 4
		Budhists	24 2	10 " 15 " ...	8·1
				15 " 20 " ...	21·9
				20 " 30 " ...	21·1
				30 " 40 " ...	21·9
				40 " 50 " ...	29 2
				50 " 60 " ...	34·4
				60 years and upwards ...	58·8

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

The 11*th January* 1888

* A special census of the Europeans in the Darjiling Municipality was recently taken as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The numbers of the natives remain as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

General remarks on the fluctuation of principal staples carried over the East Indian Railway during the month ended 26th November 1887.

INCREASES.

Coal and coke.—There was a decrease in the upward traffic and an increase in the downward despatches; the former was due to limited despatches to foreign railways, and the latter to despatches to the Eastern Bengal State Railway stations over the Jubilee Bridge.

Indigo.—This increase was due to an abundant crop in Tirhoot.

Jute, raw.—Due to short lead traffic from the Eastern Bengal *vid* the Jubilee Bridge.

Gunny.—This increase is attributable to despatches to up-country stations for linseed.

Fruits, other kinds.—The increase was principally in betelnuts from Sealdah and Digha ghât, and in fruits despatched by Cabuli traders *vid* Ghaziabad.

Gram and Pulses.—Due to despatches from North-Western Provinces to Dholpore, Gwalior and Morar owing to scarcity at these places.

Other rain and spring crops.—This increase is due to despatches to up-country stations to meet demands caused by a partial failure of the crops.

Rice (husked and unhusked).—There was a decrease in weight carried attended with an increase in earnings; the former is due to lesser demand in Calcutta for shipment, and the latter to long lead traffic despatched to up-country stations owing to the partial failure of crops.

Iron.—The increase was chiefly in despatches from Howrah owing to better demands up-country.

Oil.—The increase was chiefly in kerosine oil from Howrah.

Opium.—Due to despatches from Patna and *vid* Tarighat, in accordance with the arrangements for sale in Calcutta made by Government.

Seeds.—The increase was chiefly in linseed to Calcutta for shipment.

Sugar, refined and unrefined.—The increase was principally in despatches of jaggree from certain stations in the Dinapore district; stations on the Gya line; from Ghazipore and from the Oudh and Rohilkhund Railway *vid* Moghalsarai and Aligarh to Howrah, Great Indian Peninsula and Bombay Baroda and Central India Railways.

Piece-goods, European.—There was a decrease in weight carried, and a slight increase in earnings.

DECREASES.

Cotton.—The falling off in this staple is due to this year's crops having been both poor and late.

Other fibres, raw.—This decrease is in continuation of that reported last month, and was almost exclusively in hemp from Allahabad.

Wheat.—Due to stocks being exhausted.

Railway Material, Foreign.—There was a decrease in earnings and an increase in weight carried, the decrease was in the long distance traffic from Howrah, and the increase was in the short distance traffic for the Indian Midland Railway from Jubbulpore to Manikpore.

Salt.—The decrease was principally in the despatches from Howrah, which showed a heavy increase in November 1886 as compared with 1885.

N. St.L. CARTER, *Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, *the* 13*th January* 1888.

Nalhati State Railway.

Increase.

	Tons.
Grains—(2). Rice	108

The increase in this staple is due to greater despatches from intermediate stations owing to good crops this year and greater demands.

Oilseeds—(2). Mustard and rape	15

This increase is due to greater demands in the market.

Decrease.

Piece-goods—(1). European	22

The piece-goods for Khagra, Berhampur and Gorabazar are carried by the steamer that plies between Calcutta and Jeaganj and hence the decrease.

Silk, raw—(2) Indian	30

This decrease is due to tusser cocoons not having been brought to Aziimganj as last year.

NALHATI, *the 7th January* 1888.

R. G. MOOKERJEE, *Manager, Nalhati State Railway.*

GOVERNMENT OF BENGAL—PUBLIC WORKS DEPARTMENT

GENERAL—ROAD CESS.

Dated Calcutta, the 12*th January* 1888.

No. 123R.C.

READ—

Letter from the Accountant-General, Bengal, No. 883LF, dated 31st December 1887, submitting an abstract of the receipts and expenditure of the several District Road Committees in Bengal for the quarter ending the 30th September 1887.

RESOLUTION.—The Lieutenant-Governor directs that the accounts of the receipts and expenditure of the several District Road Committees for the second quarter of the year 1887-88 be published in the *Calcutta Gazette* and circulated to the officers concerned.

ORDER.—Ordered that a copy of this Resolution, together with a copy of the abstract of receipts and expenditure, be published in the Supplement to the *Calcutta Gazette.*

Ordered also that a copy of this Resolution, and of the abstract referred to, be forwarded to the Commissioners of the Rajshahye, Bhagulpore, Chittagong, and Chota Nagpore Divisions; to the Superintending Engineers of the Eastern and Western Circles; and to the Financial Department of this Government, for information.

By order of the Lieutenant-Governor of Bengal,

W. B. BESTIC,

Under-Secy. to the Govt. of Bengal,

P. W. Dept.

J. F. FINLAY,

Offg. Accountant-General, Bengal.

CURTAILMENT OF ANNUAL REPORTS.

REVENUE DEPARTMENT—MISCELLANEOUS.

Calcutta, the 17th January 1888.

RESOLUTION.

READ—

(1) The Government of India's Resolution in the Home Department, No. 37—1392-406, dated 12th August 1885.
(2) Bengal Government Resolution, dated 25th October 1886.
(3) Chapter V of the Report of the Salaries Commission of 1885-86
(4) Home Department Resolution, dated 15th July 1887.
(5) Finance and Commerce Department Resolution, dated 23rd August 1887.
(6) Revenue and Agricultural Department Resolution, No. 520—69-6, dated 14th September 1887.

In the Resolution first named above, the Government of India asked for an expression of the opinions of Local Governments upon proposals made by the Government of the Punjab for the abolition of certain annual reports and reviews of administration. The view adopted by the late Lieutenant-Governor, after consultation with the Salaries Commission, the Board of Revenue, Heads of Departments, Commissioners of Divisions, and Collectors of Districts, was embodied in a Resolution, dated 25th October 1886. The orders of the Government of India in its various Departments upon the subject have been received in the papers numbered (4), (5), and (6) in the preamble to this Resolution, copies of which, together with copy of Bengal Government Resolution of 25th October 1886, are appended for facility of reference. The general conclusion arrived at is that annual reports can be only slightly reduced in number, but that they should be curtailed in length to the utmost extent which is consistent with a proper examination of the facts and figures presented in them.

2. Sir Steuart Bayley now desires to impress very strongly on all officers who submit annual reports, including those not in direct communication with Government, the necessity of studying conciseness. The object aimed at in the preparation of these reports should be to convey the greatest amount of information in the fewest words possible. For the last sixteen years the tendency has been to increase the bulk of reports, and the idea that they will be saved by much writing seems to have become the guiding principle of some subordinate officers It is essential that this belief should be eradicated, and the Lieutenant-Governor hopes that all Heads of Departments will discourage its manifestation. The practice noticed by the Salaries Commission of weaving into sentences figures already given in tabular statements is but one of the methods by which the bulk of reports is increased without any addition to their value.

3. The Lieutenant-Governor notices that many officers frame a considerable part of their reports by stringing together extracts from the reports of their subordinates, when these might with great advantage have been summarised. The introduction of unnecessary contentious matter in annual reports should always be avoided. It is also to be remembered that these reports are not the proper medium for submitting definite proposals, which should form the subject of separate communications

4. Separate instructions will be issued to officers submitting reports to Government where such are necessary to supplement the orders of the Government of India, or to indicate how superfluous matter can be excluded.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

Dated Darjeeling, the 25th October 1886.

RESOLUTION—By the Government of Bengal, Revenue Department.

READ—

Home Department Resolution No. 37—1392-406, dated the 12th August 1885, regarding the curtailment of annual reports.

Report of the Salaries Commission, dated the 10th December 1885.

The Reports of the Board of Revenue, the several Heads of Departments, the Commissioners of Divisions, and other officers.

In a Resolution recorded in the Home Department on the 12th August 1885, the Government of India requested all Local Governments to submit their views on a proposal made by the Lieutenant-Governor of the Punjab to substitute in many cases triennial for annual reports, and to have statistical returns, with or without explanatory notices, for the intervening years. Sir Rivers Thompson considered that the opportunity should be taken to reconsider in detail all existing orders requiring the preparation of periodical reports under the Bengal Government, in order to the retrenchment of whatever might be found to be superfluous. The correspondence was, therefore, forwarded for examination to the Salaries Commission, and the report of that body, when obtained, was circulated to the Board of Revenue, to the Heads of Departments, to Commissioners of Divisions, and to Collectors of Districts, for the expression of their opinions. The replies of these officers were then considered by the Lieutenant-Governor at a conference of the Secretaries of the different Departments. This procedure has occupied a considerable time, but its adoption appeared desirable in dealing with a question which affects every branch of the administration.

2. The inconvenience of adding to the burden of administration by requiring the submission of unnecessary reports can be felt in no part of India more strongly than in Bengal, where officials of all classes have to economise their time with the utmost care in order to meet the varied and growing requirements of an enormous population. On the other hand, the extent of the country, the diversity of the conditions of the provinces of which it consists, the comparatively complex form of administration, and the interest taken in public affairs by a considerable section of the community, add weight to the considerations elsewhere advanced in favour of the annual preparation and publication of really important reports. The Government of India has pointed out that such reports are useful as presenting evidence of departmental efficiency, as embodying necessary information in a convenient form, as the source from which all officers collect for their guidance the results of the experience of their predecessors, and as salutary checks upon the conduct of responsible officials. In Bengal an influential section of the public looks to the publication of these reports as the means for acquiring a knowledge of the acts of Government, and would resent any serious diminution in the information given. It has been pointed out by some very experienced officers that the preparation of these periodical statements has a less obvious advantage as regards their authors. The Board of Revenue observe: "The preparation of annual reports not only ensures that the reporting officer shall review his own administration, but it guarantees, as far as it is possible to do so, that he shall have familiarised himself with its details and acquired a proper knowledge of his work. In the absence of annual reports, officers may be tempted to slur over and neglect their work. Even the most vigorous and conscientious of officials are benefited by the practice of reviewing the past, and of summarising in writing the action taken by themselves and their subordinates during the previous twelve months. The value of such a report to the officer who writes it is always great." Mr. Harrison, Commissioner of the Calcutta Police, declares in the same spirit that the report draws the attention of the reviewing officer to much which he would otherwise overlook; and Mr. A. Smith, the Commissioner of the Presidency Division, considers it "a very distinct assistance to administrative efficiency that an executive officer should be compelled once a year to examine the results of the work in all departments, and to ascertain and explain differences exhibited as compared with preceding periods, and facts which appear anomalous." It appears, indeed, to be obviously desirable that the Head of a Department should once a year take stock, examining the results of his administration, and submitting an account of it for the judgment of the authority to which he is subordinate. This work is in no case more necessary than in that of the Divisional or District Officer, who, on account of the multiplicity of his avocations and their pressing character, may be liable to overlook the general effect of his administration upon each department.

3. A considerable reduction may be effected in the bulk of annual reports by the study of conciseness, by the exclusion of all extraneous matter, and in particular by the avoidance of the practice to which attention has been drawn by the Salaries Commission, that of weaving into sentences figures which are also given in tabular statements. In the annexed statement of detailed proposals the Lieutenant-Governor is able to recommend the amalgamation of some reports, as it is believed that where there is little to be said, the effect of requiring a separate report is sometimes to encourage prolixity. As to other reports a definite suggestion is made for their curtailment, and the manner in which this can advantageously be effected will be separately indicated to the officers concerned.

4. The system of triennial reports has not as yet been tried in Bengal, and considerable doubts are felt as to whether it can be applied with advantage to any of the more important branches of administration. There are, however, some subjects, as the Registration of Assurances, Stamps, Dispensaries and Vaccination, as to which experience seems to indicate that annual reports are comparatively of small importance. In those cases it is

proposed that a full report should be submitted only every third year, statistical returns, with brief explanatory statements, being forwarded in the intermediate years.

5. The following statement shows in detail the reports submitted to this Government and the manner in which it is proposed to deal with them :—

Statement showing the several Reports dealt with by the Government of Bengal, together with the methods of treatment proposed for them.

Department of the Bengal Government in which dealt with.	Subject.	By whom submitted.	Whether submitted to the Government of India, and if so, to what Department.	Recommendations.	REMARKS.
Revenue ...	Land Revenue...	By Collectors to Commissioners, Commissioners to Board, and Board to Government.	Revenue and Agricultural Department.	The following subjects to be treated on the triennial system :— (1) Canoongoes and putwaries ; (2) Relations of landlord and tenant ; (3) Zemindari cesses ; (4) Irrigation (as to which a separate report is submitted by the Public Works Department) ; (5) Embankments ; (6) Training of young Civilians. The first two of these subjects to be fully reported on next year, the second two in 1887-88, and the two last in the third year.	
Ditto ...	Wards' and Attached Estates ...	Ditto ditto ditto ..	Ditto ditto ...	To be retained, but considerably curtailed.	
Ditto ...	Opium	By the two Opium Agents to Board, and Board to Government ...	Department of Finance and Commerce.	No change proposed.	
Ditto ...	Forest	By the Conservator of Forests ...	Revenue and Agricultural Department.	Should remain unchanged, the bulk being curtailed as directed in the New Forest Code.	
Ditto ...	Economic Museum	By the Chairman of the Economic Museum Committee.	Ditto ditto ...	No change proposed.	
Ditto ...	Zoological Gardens	Honorary Secretary to the Committee of Management of the Zoological Gardens.	Not submitted . ..	Ditto.	
Ditto ...	Administration of the Bengal Meteorological Department.	Bengal Meteorological Reporter, who submits it also to the India Meteorological Reporter.	Ditto	Brief reports for two years, with a full report the third year.	
Ditto ...	Meteorology of Bengal	Bengal Meteorological Reporter ...	Ditto	No change proposed.	
General ...	Education	By the Director of Public Instruction. The divisional reports, prepared by Educational officers, are sent to the Commissioners for remarks, which are brief ; and the primary education reports, submitted by Collectors to be incorporated in the General Report, are mostly drawn up by Deputy Inspectors of Schools.	Home Department	Ditto.	
General ...	General Administration	By Sub-divisional Officers to Collectors, Collectors to Commissioners, and Commissioners to Government.	Not submitted	This report may be somewhat curtailed by a reduction in the sections as to which special reports are submitted, and under the heading of "Tours."	
Ditto ...	On Native papers	Bengali Translator	Ditto	No change proposed.	
Ditto ...	Review of publications	By the Bengal Librarian through the Director of Public Instruction.	Home Department	Ditto.	
Ditto ...	Working of Act XXV of 1867 (Registration of Copyright).	By the Inspector-General of Registration.	Ditto	Ditto.	
Ditto ...	Working of the Brahmo Marriage Act.	Ditto ditto ..	Not submitted	Ditto.	
Ditto ...	Inland Emigration	Superintendent of Emigration ...	Revenue and Agricultural Department.	Ditto.	
Ditto ...	Colonial Emigration	Protector of Emigrants	Ditto ditto ...	Ditto.	
Ditto ...	Inspection of tea-gardens	Magistrate of Chittagong and Deputy Commissioner of Chittagong Hill Tracts to Commissioner, Commissioner to Government.	Not submitted	Ditto.	
Statistical ...	External (Frontier) trade of Bengal.	Compiled in the Bengal Secretariat from statistics collected from various sources.	Department of Finance and Commerce.	Ditto.	
Ditto ...	Railborne traffic of Bengal ; quarterly and annual. The former is called a return.		Revenue and Agricultural Department.		
Ditto ..	The river-borne traffic of Bengal, the inland trade of Calcutta, and the trade of the Chittagong and Orissa ports.			Ditto.	
Judicial ...	Administration of the Police Department.	By District Superintendents to Collectors, Collectors to Commissioner, Commissioners to Inspector-General of Police, and Inspector-General of Police to Government.	Home Department	The departmental portion of the report may be brief for two years and full for the third year, but the crime portion should continue unchanged.	
Ditto ...	Calcutta Police	By the Commissioner of Police, Calcutta.	Ditto	Ditto ditto.	
Ditto ...	Vernacular newspapers	Director of Public Instruction .	Ditto	No change proposed.	
Ditto ...	Legal affairs	Legal Remembrancer	Ditto	This report to be *triennial* ; but a short annual report to be made of any case or cases of special importance.	
Ditto ...	Calcutta Small Cause Court ...	Judge, Small Cause Court, Calcutta ..	Ditto	No change proposed.	
Ditto ..	Inspection of steam-boilers ..	Commissioner of Police, Calcutta ..	Not submitted	Ditto.	
Ditto ...	Civil Justice in the Sonthal Pergunnahs.	Commissioner of Bhagulpore and Sonthal Pergunnahs.	Ditto	Ditto.	
Political ...	Jails	By the Inspector-General of Jails ...	Home Department	That the report continue to be submitted yearly as at present, but be curtailed from its present dimensions.	
Ditto ...	Registration	Inspector-General of Registration ...	Ditto	That statistical tables with brief planatory notes be submitted two years and a full report every third year.	
Ditto ...	Working of the Indian Companies Act VI of 1882.	Ditto ditto	Department of Finance and Commerce.	That statistical tables with brief explanatory notes be submitted for two years and a full report every third year.	
Ditto ...	Alipore Reformatory School ...	Vice-President of the Board of Managers, through the Inspector-General of Jails.	Not submitted	No change proposed..	
Ditto ..	Hazaribagh Reformatory School...	Inspector-General of Jails	Ditto	Ditto.	
Ditto ..	Chittagong Hill Tracts	Deputy Commissioner of the Chittagong Hill Tracts through the Commissioner of Chittagong.	Foreign Department ...	Ditto.	

Department of the Bengal Government in which dealt with.	Subject.	By whom submitted.	Whether submitted to the Government of India, and if so, to what Department.	Recommendations.	REMARKS.
Political	Hill Tipperah	Collector of Tipperah through the Commissioner of Chittagong.	Foreign Department	No change proposed.	
Ditto	Orissa Tributary Mehals	Commissioner of Orissa	Ditto	No change proposed in these reports, except that they are to be curtailed in dimensions; there being no necessity, for example, in giving each year a history of each State *ab initio*.	
Ditto	Chota Nagpore Tributary Mehals	Commissioner of Chota Nagpore	Ditto		
Financial	Stamps	By Collectors to Commissioners, Commissioners to Board, Board to Government.	Department of Finance and Commerce.	That statistical returns with brief explanatory notes be submitted for two years, and a full report the third year.	
Ditto	Excise	Ditto ditto	Ditto	No change proposed.	
Ditto	License-tax	Ditto ditto	Ditto	This will now be replaced by the Income-tax Report which should be annual.	
Ditto	Road and Public Works Cess	Ditto ditto	Ditto	May be abolished; only the statistical tables which now accompany the report should continue to be submitted with brief explanatory notes where necessary. The subject forms a section of the Board's Land Revenue Administration Report.	
Financial	Salt	By the officers of saliferous districts to Commissioners, Commissioners to Board, Board to Government.	Department of Finance and Commerce.	No change proposed.	
Ditto	Customs	By the Collector of Customs through the Board of Revenue.	Ditto ditto	Ditto.	
Ditto	Stationery	By the Board of Revenue	Not submitted	Ditto.	
Ditto	Review of Provincial Service Accounts.	This is merely a Resolution annually recorded by the Financial Department.	Department of Finance and Commerce.	To continue annual; the review to be limited to a brief explanatory note commenting on the more prominent figures in the statements.	
Municipal	On municipalities	By Magistrates to Commissioners, Commissioners to Government.	Home Department. (A general Provincial report, compiled in the Secretariat, is submitted to the Government of India.)	To continue annual. Orders will, however, be issued for the improvement of the form and the curtailment of the length of the divisional reports. Municipal reports should include the working of the Lodging-house Act wherever this is in force, no separate report being submitted on the latter.	
Ditto	Calcutta Municipality	Chairman of the Municipality	Ditto ditto	No change proposed.	
Ditto	Working of the Lodging-house Act	By Collectors to Commissioners, Commissioners to Government (where the Act is in force).	Not submitted	To be amalgamated with the Municipal report (*vide* recommendation about the Municipal report above).	
Ditto	District Boards. (Working of the Local Self-Government Act.)	To be submitted by Magistrates to Commissioners, Commissioners to Government.	A general Provincial report, compiled in the Secretariat, to be submitted to the Home Department.	Should be annual.	
Ditto	Dispensaries	Civil Surgeons to Magistrates, Magistrates to Commissioners, Commissioners to Inspector-General of Civil Hospitals, Inspector-General of Civil Hospitals to Government.	Home Department	To be triennial, statistical returns being submitted in the intervening years.	
Ditto	Cantonment Lock-hospitals	By the Cantonment Committees to Magistrates, Magistrates to Commissioners, Commissioners to Government.	Ditto	To be submitted direct through the local Military authorities if the Military Department require the reports.	
Ditto	Calcutta Hospitals	Inspector-General of Civil Hospitals	Ditto	No change proposed.	
Ditto	Sanitation	Sanitary Commissioner	Ditto	To continue annual, with the length reduced if possible. The Vaccination report, which now forms a chapter of this report, should be separately submitted; and the report of the Health Officer of the Port of Calcutta should be amalgamated with the Sanitation Report under section VI.	
Ditto	Vaccination	Ditto	Ditto	To be triennial, with statistical returns in the intervening years.	
Ditto	Lunatic Asylums	Inspector-General of Civil Hospitals	Ditto	No change proposed.	
Ditto	Work of the Chemical Examiner	Ditto	Ditto	To be triennial, statistical returns with brief explanatory notes being submitted in the intervening years.	
Ditto	Botanical Gardens	Superintendent of the Gardens	Revenue and Agricultural Department.	No change proposed.	
Ditto	Cinchona and Cinchona Plantations.	Superintendent of the Cinchona Cultivation in Bengal.	Home Department	Ditto.	
Ditto	Working of the Jute Warehouse and Fire-brigade Act in Calcutta, Suburbs and Howrah.	Chairman, Calcutta Municipality, and the Municipalities of the Suburbs and Howrah, through respective Magistrates and Commissioners.	Not submitted	Ditto.	
Ditto	Calcutta Port Trust	Calcutta Port Commissioners	Department of Finance and Commerce, also submitted to Public Works and Military (Marine) Departments.	No change proposed.	
Ditto	Administration of the Marine Department.	Port Officer	Department of Finance and Commerce and Military (Marine) Department.	To be amalgamated, remaining annual as at present.	
Ditto	Light-houses	Ditto	Department of Finance and Commerce.		
Ditto	Calcutta Shipping Office	Board of Revenue	Not submitted	To continue annual, but be to some extent curtailed.	
Ditto	Antiscorbutics	Ditto	Ditto	No change proposed.	
Ditto	Chittagong Port	Collector of Chittagong to Commissioner, Commissioner to Government.	Ditto	Ditto.	
Ditto	Orissa Ports	Collector of Cuttack to Commissioner, Commissioner to Government.	Ditto	Ditto.	
Ditto	Health of the Calcutta Port	Sanitary Commissioner	Home, and Finance and Commerce Departments.	To be amalgamated with the Sanitation Report (*vide* recommendation about the Sanitation Report above).	
Public Works	Inspection Reports	Superintending Engineers	Not submitted	No change proposed.	
Ditto	Progress of Works	Ditto	Ditto	Ditto.	
Ditto	Road Fund	Road Cess Committees to Commissioner, Commissioner to Government.	Ditto	Ditto. The recent law invests this report with special importance at the present time.	
Ditto	Supplementary reports on road cess operations.	Commissioners	Not submitted	These have been abolished.	

Department of the Bengal Government in which dealt with.	Subject.	By whom submitted.	Whether submitted to the Government of India, and if so, to what Department.	Recommendations.	REMARKS.
Public Works	Irrigation	Collectors to Commissioners, Commissioners to Government. (Only the Collectors in the Orissa Division, and those of Shahabad, Patna, Gya and Midnapore and their respective Commissioners, are concerned.)	Public Works Department...	No change proposed.

RESOLUTION.—The subject of discussion in the papers cited in the preamble is the preparation and printing of annual departmental reports submitted to the Government of India in the Home Department. In a letter No. 392S., dated the 22nd June 1885, the Government of the Punjab solicited a reconsideration of the whole question of the preparation and treatment of annual reports, so far as that Province was concerned. The alterations suggested by Sir Charles Aitchison and the views provisionally held by the Government of India on the question are summarised in Home Department Resolution of the 12th August 1885. But as the subject was not one of merely local importance, the Governor-General in Council desired, before coming to a final decision, to have a full expression of the opinions of Local Governments and Administrations upon the proposals of the Punjab Government, so far as they affected the reports which are submitted to the Home Department. The replies from Local Governments and Administrations, read in the preamble, certain their opinions on the matter.

2. The proposals of the Punjab Government were made with the double object (1) of removing the burden thrown upon district officers, heads of departments, and Secretariat establishments in connection with the preparation and reviewing of annual reports; and (2) of reducing the cost of printing the reports. These proposals have not been accepted in full by any Local Government or Administration, except by the Chief Commissioner of Burma; and Mr. Crosthwaite, the present Chief Commissioner of that Province, holds, as his reply from the Central Provinces shows, different views from those held by Sir Charles Bernard. The Governments of Madras, Bombay, and Bengal have to some extent accepted the proposals in question, and the Chief Commissioner of Coorg has expressed his opinion generally in favour of having statistical tables, accompanied by notes, for two years, and in the third year a set of comprehensive departmental reports.

3. The most adverse criticism of the proposals made by the Punjab Government proceeds from the Government of the North-Western Provinces and Oudh, from the Administrations of the Central Provinces and of Assam, and from the Resident at Hyderabad. The Lieutenant-Governor of the North-Western Provinces and Chief Commissioner of Oudh is of opinion that the presentation of evidence of departmental efficiency, and the collection, in a convenient form, of information useful for administrative and other purposes, cannot be secured under a system of triennial reporting with intermediate statistical tables and brief explanatory notes. He considers that, as was suggested in paragraph 7 of Home Department Resolution of 12th August 1885, the brief notes would probably be of little practical value while the triennial report would necessarily be prolix, and involve much labour in its preparation. The latter, moreover, would be four years old

before the orders of Government could be passed or and subsequent action taken upon it. Sir A. Lyall observes that the labour of scrutinizing statistics is little augmented by that of writing a report on them, and that a careful scrutiny and comparison of past and present returns is a necessary part of the duty of the heads of departments in administrating. But, while opposed to the general adoption of the proposals of the Punjab Government, Sir A. Lyall would meet them to some extent by doing away with reports on certain subjects and by substituting for them statistical tables accompanied every year by a brief commentary in the form of notes, such as is now supplied by the Local High Courts of judicature in reviewing the Criminal and Civil Justice returns.

4. Mr. Crosthwaite, at the time Chief Commissioner of the Central Provinces, concurs in the views of the Government of the North-Western Provinces and Oudh in regard to the small amount of labour required to write a report, when once the relevant statistics have been systematically studied. He remarks that the system of writing reports is useful, inasmuch as it ensures that statistics have been scrutinised, and that it enables the Government to see how much care and intelligence have been devoted to this scrutiny. Reports, moreover, in Mr. Crosthwaite's opinion, enable administrative officers to periodically survey the whole of their work and to judge of the effects of it, while they assist Government in seeing how far the recognised principles of administration have been applied and how far errors require to be corrected. If for annual reports triennial reports were substituted, there is, he thinks, likely to be the disadvantage that the officer who had done the work would not ordinarily write the report, or, if he did, that his recollection of the facts regarding which he was writing would have grown dim with time. Under such a system, too, errors of administration could not be corrected at once. Mr. Crosthwaite admits that reports and reviews are often unnecessarily prolix, and should be curtailed, and he suggests that the extended distribution of reports which at present prevails is unnecessary and expensive. He also deprecates the style of review which merely repeats, in other and perhaps fewer words, what is stated in the report.

The Officiating Chief Commissioner of Assam considers that the proposals of the Punjab Government are unsuitable to that Province, and would lead to serious practical inconvenience. Mr. Ward is of opinion that the value of reports to departmental officers would be lost by triennial reports, while the labour of compiling the latter would be very great, particularly to officers who had held their charges only for a small portion of the three years.

The Resident at Hyderabad doubts if the proposed reform would have an useful effect, and argues that the review of the year's transactions by the head of the Government affords an incentive to work. Praise or blame, in the Resident's opinion, loses its effect if it relates to a time long passed away. The officer concerned may have left the locality, and it does not always happen that an officer remains at his post for the whole three years for which he would have to write the report.

5. The opinions briefly summarized above confirm the view taken by the Government of India in the Home Department, as expressed in the Resolution of the 12th August 1885, that it was not possible to go as far as was proposed by the Punjab Government in the direction of curtailing the preparation and submission of annual reports. After giving the subject full consideration, the Government of India agrees in the main with the remarks made by the Government of the North-Western Provinces and Oudh and the present Chief Commissioner of Burma, regarding the usefulness of annual reports as a means of testing departmental efficiency and the judgment and energy of officers, and also of checking and correcting administrative mistakes. Applying this principle, the Governor-General in Council is of opinion that annual reports must be maintained in the two following cases:—

(a) Where the reports deal with the application of administrative principles still open to modification or the concrete working of which has to be watched.

(b) Where the reports contain statistics which, for administrative purposes, must be complied and examined annually.

These two heads comprise so many of the reports now falling under the cognizance of the Home Department that the conclusion to which His Excellency in Council has come is that, beyond insisting on brevity and methodical arrangement in the reports themselves, and on curtailment of reviews of them, it is impossible to afford much relief to Local Governments in the direction contemplated by this enquiry. The Government of India therefore desires that the reports dealt with in the Home Department should from 1887 onwards be treated in the following manner:—

(i) To be submitted annually as heretofore—

Report on General Administration.
" Municipal Administration.
" Local Boards' Administration.
" Education.
" Sanitation.
" Civil and Criminal Justice.
" Jail Administration.
" Police Administration.
" Lunatic Asylums.

(ii) To be submitted in full every third year, statistical returns and brief commentaries in the shape of notes being submitted in the intermediate years—

Report on Registration.
" Dispensaries.
" Lock-hospitals.
" Vaccination.
" Destruction of wild beasts and snakes.

The notes to be submitted with the statistical returns in the years intermediate between the submission of the reports should give a clear, though brief, indication of the supervising or controlling officer's opinion as to the significance of the statistics.

6. The following special reports should continue to be submitted as before :—

Chemical Examiner's Report.
Report on Calcutta Medical Institutions.
Report of the Port Health Officer, Calcutta.
Report of the Commissioners of the Town of Calcutta.
Report on Publications under Act XXV of 1867.
The Review of Publications.
The Report on Vernacular Papers.

The Government of India leaves to Local Governments, who submit reports on Legal Affairs and Criminal Tribes, discretion to determine whether these reports shall be annually prepared as at present or prepared every third year, with brief notes in the intermediate years.

7. The Governor-General in Council would desire to express his earnest hope that Local Governments and Administrations will insist on curtailment of reports to the utmost extent which is consistent with a proper examination of the facts and figures presented in them. A reduction in the size of the reports on Jails, Police, Education, and Sanitation is especially necessary. In most provinces these reports have become far too discursive.

Compression of reviews is not less called for than curtailment of reports: a review should contain only what is necessary to communicate the judgment of the reviewing authority regarding the salient features of the report. The Governor-General in Council attaches no value to reviews which merely repeat in abridged form what is set forth in the report reviewed.

8. While thus recognising the need which exists for compression in the reports and reviews which reach the Government of India, His Excellency in Council is no less desirous that the same principles should be carefully followed as regards reports received by Local Governments and Administrations, but not forwarded to the Government of India. He fears that the time of administrative and executive officers is unnecessarily occupied as much by the preparation of reports and returns submitted for the information of the local authorities as by the preparation of those which reach the Government of India. He has therefore observed with satisfaction that the Government of Bengal has recently, in connection with the report of the Salaries Commission, directed its attention to this aspect of the case; and he trusts that all other Local Governments and Administrations will exercise a vigorous discretion not only in reducing the bulk of the reports and returns which are retained, but also in abolishing those that are not really required.

ORDER.—Ordered that a copy of this Resolution be forwarded to all Local Governments and Administrations for information and guidance, and that a copy be forwarded to the other Departments of the Government of India for information and further necessary action, and that it be published in the Supplement to the *Gazette of India*.

A. P. MACDONNELL,
Secretary to the Government of India.

No. 4417, dated Simla, the 23rd August 1887.

RESOLUTION—By the Government of India, Department of Finance and Commerce.

READ the undermentioned papers—

From the Government of the Punjab, No. 304S., dated the 22nd June 1885, and enclosures.
Resolution in the Home Department, No. $\frac{3\text{-A.}}{1892\text{-}1906}$, dated the 12th August 1885.
Circular letter to all Local Governments (except the Punjab), No. 2650, dated the 28th August 1885.
From the Chief Commissioner of Assam, No. 5603, dated the 25th September 1885, and enclosure.
From the Chief Commissioner of Coorg, No. $\frac{1150}{152}$, dated the 29th September 1885, and enclosures.
From the Chief Commissioner of British Burma, No. 687—148N., dated the 30th September 1885, and enclosures.
From the Chief Commissioner of the Central Provinces, No. $\frac{3883\text{A.}}{161}$, dated the 19th September 1885, and enclosures.
From the Resident at Hyderabad, No. 24G., dated the 28th January 1886, and enclosures.
From the Government of the North-Western Provinces and Oudh, No. $\frac{160}{\text{III-783}}$, dated the 13th February 1886, and enclosures.
From the Government of Bombay, No. 992, dated the 13th March 1886.
From the Government of Madras, No. 482B., dated the 14th June 1886, and enclosures.
From the Government of Madras, No. 1456, dated the 12th July 1886, and enclosures.
From the Government of Bengal, No. 1534T.R., dated the 3rd November 1886, and enclosures.
From the Government of Bengal, No. 2798, dated the 30th December 1886.
Resolution in the Home Department, No. $\frac{28}{1579\text{-}95}$, dated the 15th July 1887.

RESOLUTION.—The remarks and orders contained in the Resolution of the Home Department of 15th July above quoted, which are confined to reports furnished to that Department, seem to apply equally to the annual* reports upon subjects administered in this Department. The general opinion of the Local Governments who were consulted on the subject in opposed to any considerable curtailment of reports bearing on revenue matters. The administration of Provincial revenues is left so much is

* Opium.	Customs.
Salt.	Mints.
Stamps.	Trade.
Excise.	Joint-Stock Companies.
Assessed Taxes.	Post Office.

the hands of Local Governments, and they are also financially so greatly interested therein, that it is not, in the opinion of the Government of India, expedient to restrict the Provincial authorities with respect to the information they may consider it desirable to collect and to place on record regarding them.

2. In the case of Opium and Salt Administration Reports, the fiscal interests involved are of such great importance that, even if the fullest information were not necessary for the purposes of the Local Governments, annual reports would be required by the Government of India in order to enable it to watch the administration of the revenue. These reports should therefore be as full as possible without being prolix, and should be furnished to the Government of India annually as at present.

3. As regards the reports on Stamps, the Governor-General in Council has no objection to their being prepared and submitted triennially by any Local Government which considers this sufficient Statistical information only would in this case be submitted in the intermediate years. The reports on the External Land Trade may also be submitted triennially in the same way, the monthly statistics of the trade being transmitted to this Department as at present.

4. The remarks contained in paragraph 5 of the Home Department's Resolution on the necessity of methodical arrangement are specially applicable to the reports submitted to this Department. In reports bearing on revenue matters and trade, comparisons with past years are of special value; but these are rendered difficult unless a systematic arrangement is observed in the subjects dealt with.

5 The Excise reports should in all cases be prefixed by a concise description (which may be repeated from year to year) of the various systems on which the excise is administered in the province concerned, and the extent to which each system applies. There is necessarily in such matters much diversity of practice, and the value of the reports is occasionally diminished by the use of technical terms, whose precise signification is little known beyond the limits of the province, and is often different in different provinces.

ORDER.—Ordered that a copy of this Resolution be forwarded to all Local Governments and Administrations and to the Heads of Departments under the Department of Finance and Commerce for information.

(14) From the Chief Commissioner, Assam, No 1192, dated the 22nd February 1886.
(15) " Resident at Hyderabad, No 63G, dated the 5th March 1886.
(16) Resolution recorded in the Home Department, No. $\frac{28}{15,9-95}$, dated the 15th July 1887

RESOLUTION.—This Resolution may be considered as supplementary to that issued in the Home Department, No. 28, dated 15th July 1887, the general principles expressed in which may be applied to reports submitted to the Government of India, in the Revenue and Agricultural Department. The reports thus submitted are concerned with the subjects enumerated below—

(1) Land Revenue Administration.
(2) Forest Administration.
(3) Land Records and Agriculture.
(4) Court of Wards and other estates administered by Government.
(5) Horticultural and Botanical Gardens.
(6) Experimental Farms.
(7) Trade Statistics, Quarterly and Annual.
(8) Colonial and Inland Emigration.

2. The Government of India concurs with the general opinion expressed in the replies which have been received that no material alteration should be made in the preparation of the Land Revenue Administration and Forest Administration Reports, and that these should continue, as at present, to be annually submitted.

3. *Report of the Department of Land Records and Agriculture*.—The annual publication *in every Province* of the Report of the Department of Land Records and Agriculture

in the form prescribed in Circular Resolution No. 54A., dated the 28th April 1884, is, in the opinion of His Excellency in Council, essential for the purpose of indicating the progress which may be annually made by the Department of Land Records and Agriculture in connection with the measures adopted in pursuance of the recommendation of the Famine Commissioners in each portion of the Empire. The report consists of two main divisions—Land Records and Agriculture—and is designed to show the executive work of the Department, not to comprise discussions on administrative measures or to contain any description or summary of the economic or agricultural circumstances of the season. The Local Government may, however, require information of this kind to be submitted by the Department to the Chief Revenue authorities of the Province, for utilization in preparing the Land Revenue Administration Report, and may prefer that for that purpose it should be included in the Land Record section of the Departmental Report, rather than be submitted by independent communication. There will be no objection to this course. But there seems to be no reason why statistical statements concerning crops, irrigation, tenures, &c., should find a place in the Report of the Department as well as in the Annual Land Revenue Administration Report, to which latter they should, in the opinion of His Excellency in Council, be confined. The Agricultural section of the Departmental Report should be restricted to an account of the executive operations of the departmental officers, and to a brief description of, or reference to, any results of special interest which may have been obtained during the preceding twelve months, whether in farms, gardens, Government estates, or otherwise, but should avoid lengthy discussions on agricultural subjects, and need not contain any detailed examination of the working of gardens, farms, or other agricultural institutions, which should be dealt with in the Department by orders on the annual reports. In accordance with the above remarks, His Excellency in Council is of opinion that no other review of the Annual Report of the Director of the Department of Land Records and Agriculture than that which may be included in the review by the Local Government of the Land Revenue Administration Report is necessary; and that it will suffice if a copy of the Report, together with any orders which may be passed thereon, is submitted for the information of the Government of India.

4. *Report on Court of Wards and other estates administered by Government.*—Much importance is attached by Her Majesty's Secretary of State, as well as by His Excellency in Council, to the manner in which estates under Government management are administered, and to the use made of the opportunities afforded by them for ascertaining the economic condition of the agricultural population. Reports on such estates should, in the opinion of the Government of India, continue to be annually prepared. These, and not the reports of the Department of Land Records and Agriculture, should contain an account of any agricultural improvements that may have been introduced.

5. *Annual Reports on Horticultural and Botanical Gardens*—These may, as already indicated, be dealt with departmentally, and need not, in the opinion of the Government of India, be reviewed at length by any higher authority than the Director of the Department of Land Records and Agriculture, or other controlling officer, but should be forwarded to the Government of India for information, with a copy of any orders that may have been passed on them by the Local Government. A representation recently received through the Secretary of State from the authorities at Kew, as to the utility of such reports, indicates the advisability of their maintenance as a record of useful or interesting facts and experiments.

6. *Reports on Experimental Farms* are divided into two sections—Statistical and Administrative. The former are issued yearly or half-yearly, and should, under existing orders, be distributed by Departments of Land Records and Agriculture direct to the Government of India, other provinces, and agricultural institutions. They should continue to be prepared, but require no review or orders by the Local Government. The complete reports, including the Administrative section, will be dealt with in the same manner as reports on gardens.

7. *Internal Trade Statistics.*—The quarterly and annual returns are, under existing orders, distributed and briefly reviewed by the Department of Land Records and Agriculture, or by such other authority as may be responsible for them. In future the annual report on Internal trade may, in the opinion of His Excellency in Council, be dealt with in the same manner as reports on Sea-borne trade; and no further review will be required from Local Governments and Administrations.

8. *Reports on Colonial and Inland Emigration* should be retained in their present form.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Local Governments and Administrations noted in the margin, for information and guidance; and to the Home Department for information.

Madras.	Punjab.
Bombay.	Central Provinces.
Bengal.	Burma.
North-Western Provinces and Oudh.	Assam.
	Hyderabad.

Ordered also that it be published in the Supplement to the *Gazette of India.*

[True Extract.]

E. C. BUCK,

Secretary to the Government of India.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE CALCUTTA MUNICIPAL CORPORATION FOR THE YEAR 1886-87.

MUNICIPAL DEPARTMENT—MUNICIPAL.

Calcutta, the 19th January 1888.

RESOLUTION.

READ—

The Administration Report of the Calcutta Municipal Corporation for the year 1886-87.

Read again—

The Report for 1885-86, and the Resolution recorded upon it.

The Report which has been submitted shows that the Commissioners have during the year taken great interest in the duties entrusted to them. In paragraph 4 is given a table showing the attendance of the Commissioners at the different meetings held. The average attendance at meetings of those invited to attend was 48·6 per cent. as against 50·5 per cent. last year. At General and Town Council meetings there was a slight improvement (59·3 and 49 per cent. as against 58·8 and 48 per cent. last year), while there was a slight decrease in the attendance at Committees and Sub-Committees (36 6 per cent. as against 41·1 per cent). It is no doubt at these last that the hardest work is done; but to ascertain the real and great improvement which has taken place it is necessary only to compare the report criticised by Sir Ashley Eden in 1880 with that now placed before Government. This, in Sir Steuart Bayley's opinion, promises well for the manner in which the heavier duties connected with the larger area of the Suburbs and the Town will be performed.

2. The revenue receipts and expenditure are shown under three heads—General Fund, Water-rate, and Lighting-rate. The total income was Rs. 30,01,636 and the expenditure was Rs. 29,96,189. In paragraph 72 it is stated that the administration of the License Department, the receipts of which go to the General Fund, has been far from satisfactory during the year. The Lieutenant-Governor desires to be informed what action the Commissioners have taken on the points indicated in that and the next succeeding paragraph. From the General Fund a sum of Rs. 1,36,779 was expended on the "cleansing and structural improvement of bustees." Under the head Lighting-rate there was an excess of expenditure over receipts of nearly Rs. 30,000. Rather more than half of this was due to the illumination for the Jubilee of Her Majesty. But if this item be excluded, it still appears doubtful whether the normal expenditure will not prove to be in excess of the income. This fund closed the year with a deficit of Rs. 6,880. The Police-rate Fund and other special funds do not call for any remark.

3. Sanction was accorded to raising a loan of Rs. 26,25,000. Of this, however, Rs. 8,75,000 was for the purpose of repaying the 6 per cent. loan of 1866, and the net liability of the Corporation was increased by only about thirteen lakhs during the year. At the close of the year this liability amounted to Rs. 1,69,12,035. The capital expenditure, exclusive of sums spent on brokerage, discount, and repayment of loans, amounted to Rs. 10,76,787, and was distributed as follows:—

	Rs.
Drainage	1,58,343
Water-supply	7,58,141
Town and bustee improvement	1,53,974
Jora Bagan bustee improvement	6,329
Total	10,76,787

4. The heads of expenditure noticed in the last paragraph indicate the chief directions of activity during the year, and considerable progress has been made. The special drainage works undertaken during the year were the drainage of Hastings, the drainage of the Baug Bazar area, and the sewering of a portion of the Mahratta Ditch. Sixteen tanks were filled up during the year and twenty-two were being filled up; while at the same time

twenty-eight more bathing-platforms were brought into use. On the cleansing and structural improvement of bustees, the total expenditure amounted to Rs. 2,17,554. Of 39 bustees taken in hand by the Commissioners, 16 have now been thoroughly dealt with. Before the close of the year the improvements in four others were approaching completion, and those in five others had been commenced. The expenditure incurred on this account is shown in a new abstract account which has been opened of the receipts and disbursements of the Town and Bustee Improvement Capital Account, and to this account have been transferred the sums set apart in the General Fund account for expenditure on Town and Bustee Improvement. The results are creditable, and the Lieutenant-Governor trusts that the Commissioners will continue to direct their attention to this very important subject.

5. A very interesting case was brought to notice by the Health Officer in his report for the quarter ending 31st March 1887, in which there was reason to believe that the occurrence of an outbreak of cholera on board a vessel in the port was connected with the circumstance that the milk supplied to some of the crew was adulterated by the vendor with water from a polluted tank situated in Howrah. It was found that immediately before the outbreak in the vessel there was a case of cholera in a house on the bank of the tank, and that this was followed by several others. The attention of the Commissioners of the Howrah Municipality will be drawn to the case.

6. As an appendix to the Report is printed the Report of the Health Officer of the Corporation, which is not inferior in interest to any which has yet been submitted. He has continued the enquiry into the causes which facilitate the spread of cholera with energy; and, apart from its scientific interest, this enquiry, which discloses a very bad state of things in the bustees and most thickly populated portions of the town, indicates with sufficient definiteness the directions in which action is urgently required. The care and minuteness with which the enquiry has been conducted are sufficiently shown by the maps and diagrams which accompany the Report. The conclusions to which the Health Officer has come are that there has been a recent increase in the mortality from cholera, and that, coincident with this increase, and most marked where the increase has been greatest, there have been a growing scarcity of water, extension of drainage unaccompanied with sufficient flushing and cleansing, and insufficient conservancy and nuisance removal. The Commissioners do not wholly endorse the conclusions of their Health Officer. They contest the statement that there has been a growing scarcity of water, and they point out that the mortality from cholera fell before the introduction of the water-supply, and that the death-rate is greatest simply where the population is densest; while they refer to the researches of Dr. Simpson's predecessors as showing that the mortality in Calcutta rises and falls with that in the neighbouring districts, and that the explanation of the recrudescence of cholera noticed by Dr. Simpson must be sought for in wider and more general causes than those indicated by him.

7. The final conclusion of the Health Officer is given in the last paragraph of his Report on Cholera. It is that the return to a higher death-rate in Calcutta compared with previous years means that the sanitary work has not kept pace with the requirements of the town. The proof of the deterioration, as distinguished from the specific causes assigned for it, which have been mentioned in the preceding paragraph, is given in paragraph 32 of that Report. In the table given in that paragraph, a comparison is made of the absolute numbers of deaths in Calcutta, in Howrah, and in the Suburbs. Two periods of four years each are selected for comparison, the numbers of deaths in the three places are compared, and the results are reduced to the form of a ratio. It is shown that in the second of those periods, as compared with the first, the ratios which the numbers of deaths in Howrah and in the Suburbs bear to the numbers of deaths in Calcutta have diminished. It is inferred from this that either the sanitation of the two former places has improved, or that of Calcutta has grown worse; it is argued that there has been no improvement in Howrah or in the Suburbs; and the final conclusion is thus reached. In the second of the two periods

selected there was no increase in the aggregate numbers of deaths in Howrah and the Suburbs; so that the comparison made does afford some grounds for the first conclusion arrived at, that either these places have improved or Calcutta has grown worse. But the method of comparison adopted is likely to mislead. The population of Calcutta is greater than that of the Suburbs, while the absolute number of deaths from cholera in Calcutta is less. It is obvious therefore that an identical increase in the rate of mortality will make the absolute number of deaths more nearly equal, and this error is intensified when the results are shown in the form of ratios. Thus, if the deaths in Calcutta and in the Suburbs increased by precisely the same number, the ratio, which is the basis of the comparison, would approach more nearly to equality; whereas really the rate of increase in Calcutta would have been much less because it has a larger population. A similar objection applies to the comparison with Howrah.

8. A more suitable basis for comparison is the mean death-rates in the different areas in consecutive periods. A comparison of the quinquennial mean death-rates of the years 1875 to 1880, with those of the years 1881 to 1885, shows that the mean death-rate of Calcutta increased from 3·1 to 4·5, that of Howrah from 4·6 to 6·1, and that of the Suburbs from 7·4 to 8·4. The increase was therefore less in Calcutta than in Howrah, and greater in Calcutta than in the Suburbs. It is important to observe also that this increase in the mean death-rate is not peculiar to the places mentioned, but is shown by the second diagram facing page 10 of the Health Officer's report for 1885 to have taken place also in the neighbouring districts. These facts appear to the Lieutenant-Governor to justify the opinion of the late Health Officer of Calcutta, in which the Commissioners concurred, that the increase is to be attributed to wider and more general causes, than local insanitation.

9. At page 11 of the Health Officer's Report on Cholera a diagram is given showing the rates of mortality in Calcutta, Howrah and the Suburbs, and, in support of his argument that Calcutta has retrograded, the Health Officer points out that the rise both in the Suburbs and in Howrah during the last quinquennium is not greater than the height reached in them in some of the years of the previous decade, while the rise in Calcutta attained a greater height than it had attained in the previous ten years. It appears to the Lieutenant-Governor that the facts scarcely support this conclusion. An inspection of the diagram shows that the death-rates exhibit great differences, that of Calcutta remaining the lowest and increasing the least. In other words, the superior sanitary condition of Calcutta keeps the disease more under control.

10. While, however, the Lieutenant-Governor agrees with the Commissioners that the arguments adduced by the Health Officer are not sufficient to establish the fact of positive retrogression in the sanitary state of Calcutta, they are certainly sufficiently serious to demand the most careful and vigilant action of the Commissioners to remedy the defects complained of. The question is not whether the increase of cholera in Calcutta is due to deterioration of sanitary efficiency compared with that of past years, but whether the defects pointed out do or do not exist, and what measures the Commissioners are prepared to take to remedy them. The Health Officer clearly shows that where the insanitary conditions indicated by him are most marked, there also the increase of mortality is most noticeable; and though his comparative inferences may be combated, his statement of existing facts is scarcely sufficiently met by the remarks in the Commissioners' Report. The Commissioners point to the report of their Engineer as showing that the supply of filtered water is greater than it has ever been before, and contend that filtered water is now within the reach of all. The Health Officer, in paragraph 19, page 6, of his report on the distribution of cholera during the past ten years' admitted the increase, but he showed how, notwithstanding this, it would be erroneous to infer that more water was everywhere and for all classes available. Yet this is the inference on which the Commissioners rely. The specific statements which Dr. Simpson makes are the results of his own personal observations, and they do not bear out the Commissioners' conclusions. The scarcity may be due to preventible waste, or it may be due to causes at present unknown; but the Lieutenant-Governor considers

that the matter is one which calls for thorough investigation, and he hopes that the Commissioners will cause such an investigation to be made. The second point to which the Health Officer draws attention is the insufficient provision for cleansing drains in narrow streets. As regards this the Commissioners refer to the increased supply of unfiltered water; but this reply is open to the same objection—that it misses the special point in issue. It is not a necessary inference from this fact that the particular drains referred to by the Health Officer are properly cleansed; while, on the other hand, it should be remembered that in this case also the conclusions of the Health Officer are based on actual inspections made by him. With reference to the third cause assigned by the Health Officer—insufficient conservancy and nuisance removal—the Commissioners give figures showing the increase in the amount of rubbish removed from the Town. In paragraph 153 of the Report, however, the increase in the year 1886-87 is attributed partly to the fact that only a few tanks are now available for filling with rubbish; and as the number of cart-loads disposed of in this manner in each year is not given, it is impossible to say what weight ought to be attached to these figures. The Lieutenant-Governor trusts that these questions will receive the early and earnest attention of the Commissioners.

11. The Lieutenant-Governor desires to thank the Commissioners for their services and the interest shown by them in the affairs of the Municipality during the year. The Hon'ble Sir Henry Harrison was Chairman of the Corporation, Baboo Gopal Lal Mitter, Vice-Chairman, and Mr. Robert Turnbull, Secretary, throughout the year. The Commissioners close their report with a well-merited encomium of the excellent service rendered to the Corporation by their Secretary, Mr. Robert Turnbull. Mr. Turnbull is about to retire upon a special pension which the Commissioners have granted him in recognition of the attention, courtesy and assiduous devotion to duty displayed by him during many years. The Lieutenant-Governor has much pleasure in endorsing the judgment of the Commissioners, and in testifying to the high esteem in which Mr. Turnbull has been held both by the Government and by the public.

By order of the Lieutenant-Governor of Bengal,

COLMAN MACAULAY,

Secretary to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 21st January 1888.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
BURDWAN DIVN.	1	Burdwan, Jan 21, '88	Nil	Weather—seasonable, and cooler than last week. Prospects of *rubbi* crops fair. Prices stationary.
	2	Bankoora „ 21, '88	Nil	Weather—seasonable. *Rubbi* crops thriving. Sugarcane is being cut and pressed; a 12-anna outturn expected. Prices continue stationary.
	3	Beerbhoom „ 21, '88	Nil	Weather—seasonable; sometimes cloudy during latter portion of the week. Threshing of paddy continues. Sugarcane is being cut. Cereals look healthy Prices stationary.
	4	Midnapur „ 21, '88	Nil	Weather—cool. *Rubbi* and *boro* promise well.
	5	Hooghly „ 21, '88	Nil	Weather—cool and bright. Prospects of crops continue good Rice selling at from 14½ to 16 seers per rupee.
		Howrah „ 21, '88	Nil	Weather—clear and cold. Harvesting of *amun* and sugarcane continues.
		Central Districts.		
PRESIDENCY DIVN.	6	24-Perghs. Jan 21, '88	Nil	Weather—seasonable; cool and cloudy at times. Harvesting of *amun* nearly over; outturn satisfactory. Sugarcane is still being cut.
	7	Nuddea „ 21, '88	Nil	Weather—seasonable on the whole. Sugarcane and *rubbi* doing well. Rain is much wanted.
	8	Khoolna „ 21, '88	Nil	Weather—seasonable. Harvesting of *amun* still continues. Winter crops doing well.
	9	Jessore „ 21, '88	Nil	Weather—seasonable. Harvesting of *amun* nearly completed. Prospects of winter crops not very good for want of rain.
	10	Moorshedabad „ 21, '88	Nil	Weather—seasonable. Harvesting of *amun* continues; outturn good. *Rubbi* crops promising well.
RAJSHAHYE DIVN.	11	Dinagepur Jan. 21, '88	Nil	Weather—seasonable. Harvesting of winter rice still continues. Prospects of standing crops good. Rice 24 seers per rupee.
	12	Rajshahye „ 21, '88	Nil	Weather—seasonable. Cold-weather crops doing fairly well Sugarcane is being cut.
	13	Rungpur „ 21, '88	Nil	Weather—dry. *Amun* is still being harvested. Gathering of mustard has commenced Land is being prepared for *aus*. Prospects of tobacco and pulses good.
	14	Bogra „ 21, '88	Nil	Weather - seasonable. Cold-weather crops promise well. Harvesting of *amun* nearly over.
	15	Pubna „ 21, '88	Nil	Weather—fine and colder. Prospects of crops good.
	16	Darjeeling „ 21, '88	Nil	Weather—cloudy. State and prospects of crops good. Rain wanted.
	17	Julpigoree „ 21, '88	Nil	Weather—cold; cloudy at times. Harvesting of winter rice almost completed; outturn ten to twelve annas. *Rubbi* crops doing well. Prices stationary.
		Eastern Districts.		
DACCA DIVISION.	18	Dacca, Jan. 21, '88	Nil	Weather—cold. *Boro* paddy is being planted. *Rubbi* crops doing well. Some winter rain would be seasonable. Fodder reported to be insufficient in a few places.
	19	Furreedpur „ 21, '88	Nil	Weather—seasonable. Crops doing well everywhere.
	20	Backergunge „ 21, '88	Nil	Weather—seasonable. Prospects of crops good.
	21	Mymensingh „ 20, '88	Nil	Weather—very cold. State and prospects of crops continue good.
CHITTAGONG DIVN.	22	Chittagong Jan. 24, '88	Nil	Weather—cold. Winter crops promise well. Prices steady.
	23	Noakholly „ 20, '88	Nil	Weather—seasonable. Reaping of *amun* nearly finished. *Rubbi* crops doing well.
	24	Tipperah „ 19, '88	Nil	Weather—dry and cold. Harvesting of *amun* paddy and sowing of *boro* paddy finished. Outturn of *amun* generally good. Prospects of *rubbi* crops excellent. A little rain seems necessary. Cutting of sugarcane still in progress.
	25	Chittagong Hill Tracts. „ 17, '88	Nil	Weather—colder than ever from about 10 P.M. to 10 A.M. Heavy morning fogs continue. Bright and sunshiny during daytime. Mustard and other cold-weather crops doing well. Pressing of sugarcane has commenced.
		Hill Tipperah „ 18, '88	Nil	Weather—seasonably cold. Mustard, chillies and sugarcane doing well. *Joom* cotton gathered; a full harvest obtained.

Division	No	District and date of return.		Rainfall at Sudder Station in inches	Character of the weather and state and prospects of the crops.
BEHAR.					
Patna Divn.	26	Patna	Jan. 21, '88	Nil	Weather—very cold and pleasant. Threshing of paddy approaching completion. Poppy plants doing well. Prospects of *rubbi* crops fair; but rain wanted. Prices now stationary.
	27	Gya	" 21, '88	Nil	Weather—cold. Harvesting of paddy nearly finished. It is being threshed. *Rubbi* crops in tolerably good condition. Poppy progressing on.
	28	Shahabad	" 21, '88	Nil	Weather—very cold and occasionally cloudy. State of *rubbi* crops continue satisfactory, but rain badly wanted. Prospects of poppy very good.
	29	Durbhunga	" 21, '88	Nil	Weather cloudy; very cold. *Rubbi* crops continue promising, but want rain. Wheat, barley and *rahar* in ear. Poppy is doing well. Tobacco is being harvested. Prices stationary.
	30	Mozufferpur	" 21, '88	Nil	Weather—cold. Prospects of *rubbi* and poppy fair; but rain wanted for both.
	31	Saran	" 21, '88	Nil	Weather—cloudy for last few days, but no rain. Prospects of all crops good.
	32	Chumparun	" 21, '88	Nil	Weather—cold and cloudy. Threshing of *aghani* nearly completed. Poppy flowering in places. Prospects of *rubbi* crops look favourable. A shower of rain would do good both to *rubbi* and poppy.
Bhagulpore Divn.	33	Monghyr	Jan. 21, '88	Nil	Weather—very cold with westerly wind generally. Prospects of *rubbi* and poppy crops continue promising.
	34	Bhagulpore	" 21, '88	Nil	Weather—seasonable with strong west wind. Winter rice has been all reaped. *Rubbi* crops promise well. Rain wanted.
	35	Purneah	" 21, '88	Nil	Weather—clear and cold. Winter crops doing well.
	36	Maldah	" 21 '88	Nil	Weather—cold and fine. Harvesting of winter rice nearly completed with good outturn. Prospects of spring crops good except in the far north-west, where insects have done some damage. *Kalai* and mustard are still being reaped with good outturn. Common rice selling at an average of 23¼ seers per rupee.
	37	Sonthal Perghs.	" 21, '88	Nil	Weather—seasonable. Prospects of winter crops continue good, though rain is wanted in the Rajmehal sub-division. Pulses are being reaped in parts of the district.
ORISSA.					
Orissa Divn.	38	Cuttack	Jan. 20, '88	Nil	Weather—seasonable and fair. Reaping of *sarad* rice nearly completed. Prospect of *dalua* rice good. Wheat and cotton doing well. Price of common rice varies from 19½ to 21 seers per rupee in town.
	39	Pooree	" 19, '88	Nil	Weather—seasonable. Harvesting of late *sarad* crop nearly finished. *Dalua* crop doing well. Common rice 24 seers 3 chittacks per rupee in the Sudder sub-division and 25 seers 12 chittacks in the Khoorda sub-division.
	40	Balasore	" 20, '88	Nil	Weather—cool and fair. Harvesting of *sarad* paddy nearly completed. *Rubbi* crops are being gathered. Sugarcane is being pressed. Prospects of *dalua* rice and other crops good.
CHOTA NAGPORE.					
South-West Frontier Agency.					
Chota Nagpore Divn.	41	Hazaribagh,	Jan. 20, '88	Nil	Weather—bright and cold. Prospects of *rubbi* crops remain unaltered. More rain wanted for these crops. Poppy is thriving and has commenced to flower; prospects fair. Sugarcane is being cut and pressed; outturn expected to be about 14 annas. Cattle-disease has abated.
	42	Lohardugga	" 21, '88	N	Weather—very cold. Late rain has done much good to *rubbi* crops. No change in prices.
	43	Singbhoom	" 20, '88	Nil	Weather—bright and cold. *Rubbi* not doing well for want of rain. Sugarcane, oilseeds and *rahar* being reaped; a 10 to 12-anna outturn expected.
	44	Manbhoom	" 21, '88	Nil	Weather fair and cold. Prospects of cold-weather crops fair. Mustard is being reaped; outturn below the average. New *goor* 8 to 10 seers per rupee. Rice 20 to 21 seers per rupee.

Published for general information.

* Means for six days.

[illegible].—*Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten
The *humidity* of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number
are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 24
station in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 20th of January 1888

Average humidity at 10 A.M.	Average cloud amount at 10 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Of week. Mean for district	Of week. Normal mean.	Rainfall. Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1887. Mean for district	Since 15th May 1887. Normal mean.	Since 15th May 1887. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station	District.	Meteorological Division.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 24th January* 1888.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 20TH OF JANUARY 1888.

THE weather during the past week has again been uniformly fine over the greater part of the province, and except in parts of Behar and North Bengal skies have been practically cloudless throughout this period. Along the line of the hills as represented by the observations at Darjeeling, skies have been heavily clouded throughout the week, and about the 16th skies began to cloud over at some of the stations in the plains near the foot of the hills. These conditions were probably the result of the easterly movement of a slight barometric depression which had formed over Northern India at the close of the previous week, but the depression was apparently of a slight nature and rapidly filled up in its advance. It appears probable, however, that the depression must have given a fall of snow along the Himalayas, though with the exception of a few drops of rain reported from several stations, no measureable falls of rain have been reported at any of the stations in either North Bengal or Behar. In Chutia Nagpur at Hazaribagh on the 18th, and in Orissa at Dhurmsalla in the Cuttack district on the 17th instant light showers have fallen, but with these exceptions the whole province was rainless throughout the week. Winds have generally been light at the majority of stations, and in several instances calms were reported during the earlier days of the week, but the wind directions on the whole have been fairly steady from the north and north-west. Throughout the week therefore the cold-weather conditions in Bengal have been well marked and have been very fully developed.

Barometer.—During the previous week a steady and prolonged fall of pressure had taken place, but at the beginning of the present week a slight increase of pressure commenced, which has continued almost uninterruptedly during the week, though on the 17th and 20th slight falls were reported at some stations. Nevertheless the average pressure for the province has been slightly in defect of the normal, and taking into consideration only those stations which have recorded observations for a series of years, the mean pressure for the week for the whole province has been 0·014 inch in defect. The defect is again largest in the northern districts, such as North Bengal and North Behar.

Temperature and Humidity.—Humidity was decidedly low at the commencement of the week, but it then generally increased and remained moderately high till the close of the week, when it again began to fall. The variations of temperature have also been somewhat similar, and temperature was low on the 14th, and it then rose slowly at the majority of stations for the greater part of the week, but on the 20th it had again commenced to fall. Compared with the normal, the mean temperature of the province for the week has been 1·3° in defect of the normal, and this defect is very equally distributed, except in the case of South Behar, where it has been somewhat less than 1°.

The variations of the average temperature during the week from the normal can be seen from the following table, where the average maximum, minimum and mean temperatures at nine typical stations in different districts in the province are given compared with the normal means for the same period. It will be seen that the defects from the normal have been largest in the night or minimum temperatures, for the mean maximum or day temperature of the nine stations has been 0·4° in defect of the normal, while the mean minimum or night temperature has been 2·2° in defect of the normal:—

Table showing the excess or defect of the actual temperature from the normal for the week ending 20th January 1888.

	Normal mean maximum temperature for the week ending 20th January.	Actual mean maximum temperature for the week ending 20th January 1888.	Excess or defect of the actual temperature from the normal mean.	Normal mean minimum temperature for the week ending 20th January.	Actual mean minimum temperature for the week ending 20th January 1888.	Excess or defect of the actual temperature from the normal mean.	Normal mean daily temperature for the week ending 20th January. The average fall of the corresponding period for 24 years, S. G.'s Office	0·17

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

≡ fog, , ⌓ dew.

JOHN ELIOT,
Offg Meteorological Reporter to the Govt of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;
Calcutta, the 23th January 1888.

MEMORANDUM.

The chief features in the mortuary statistics of the districts in Bengal, for the month of November 1887, deduced from the table annexed to this memorandum, are—

1. That the deaths of 147,957 persons were registered out of a population of 66,163,884 in these districts, presenting a death-rate of 26·76 per 1,000 per annum, against 24·48 per 1,000 in the preceding month, and 32·04 per 1,000 during the corresponding month of 1886, indicating, as compared with the former period, a fair advance in the registration of deaths, and that of the latter period, a great retrogression.

2. That the highest casualty-rates were returned from the following districts:—

Districts.	Ratio per *mille*	*Districts.*	Ratio per *mille.*
Maldah ..	53 64	Bogra ..	34·20
Murshidabad ..	46 44	Bhagulpur	33·00
Nuddea ...	44·88	24-Pergunnahs	32 88
Rajshahye ..	43 08	Purneah	32·64
Dinajpur .	40 08	Khulna	32·28
Monghyr	40 08	Pubna	30·36
Rungpur	38 16	Puri	29 40
Backergunge ...	36 72	Hazaribagh	29·28
Julpaiguri . .	36 36	Jessore	29 04
Birbhum	36 12		

3. That referring to the incidence of the specific death-causes mentioned in the table given below, it is seen that cholera and fever prevailed with considerably less fatality during the month under notice as compared with the results of the corresponding month of the preceding year, and that the death-rates from the other diseases exhibited only fractional variations:—

	Ratio per *mille* during—	
	November 1887.	November 1886
Cholera	·48	2 88
Small-pox	·02	·01
Fever	21·48	24 00
Bowel-complaints	·72	·96
Injury	·12	·24
Other causes	3 60	3·72

4. That the following districts returned the highest death-rates per 1,000 of population from the above-mentioned diseases, excepting small-pox, bowel complaints, and injury, which do not appear to have presented any local severity:—

Cholera.

	Ratio per *mile*
Puri ...	4 08
Balasore ...	2·28
Chittagong ..	2·16

Fever.

	Ratio per *mile*
Maldah	52 56
Murshidabad ..	43·20
Rajshahye	41·40
Nuddea	39 96
Dinajpur	37 08
Rungpur . .	35 28
Julpaiguri	33 60
Monghyr	32 88
Purneah	32 04
Bogra ...	30 96
Birbhum ..	30 00
Pubna ..	28 08
Bhagulpur ...	27·48
Khulna	27·24
Jessore	27·00

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,
The 16th January 1888.

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

MEMORANDUM.

The birth and death returns from the principal Municipalities in Bengal afford the following results for the week ending 31st December 1887:—

1. That births were registered at the rate of 25 6 per 1,000 of population and deaths at 30·7 per 1,000, as opposed to 23 0 and 29 5 per 1,000, respectively, during the preceding week ending 24th December, showing an improvement in the registration of both.

2. That the following Municipalities furnished the highest proportions of births and deaths:—

Births.	Ratio per *mille*
Naraynganj ...	78 7
Bhagulpur ...	41 8
Durbhanga ...	42 5
Hughli ...	41 0
Arrah ...	35 9
Monghyr ...	35 3
Comillah ...	31 6
Howrah ...	30 3

Deaths.	Ratio per *mille*
Suburbs of Calcutta ...	58 3
Naraingunj ...	49 7
Santipur ...	19 1
Jessore ...	42 9
Hughli ...	11 6
Bhagulpur ...	41 6
Beauleah ...	31 8
Serampur ...	35 3
Durbhanga ...	33 8
Puri ...	33 6
Chittagong ...	32 5
Burdwan ...	32 0
Kishnagar ...	30 3

3. That, as compared with the results of the preceding week, there was a noticeable enhancement of mortality from fever, and only fractional differences in the rates from the other death-causes, bowel-complaints and injury presenting no variations:—

	Ratio per *mille* during the weeks ending—	
	31st Dec 1887	24th Dec 1887
Cholera ...	3 3	4 0
Small pox ...	03	1
Fever ...	13 3	12 1
Bowel complaints ...	5 5	5 5
Injury ...	2	2
Other causes ...	8 3	7 6

4. That the Municipalities named below appeared to have suffered the most from the diseases indicated in the foregoing table, excepting small-pox and injury, the casualties from which were nowhere above normal:—

Cholera	Ratio per *mille*
Naraingunj	20 7
Suburbs of Calcutta	10 8
Santipur	10 5
Durbhanga ...	5 5
Howrah ...	2 3

Fever	Ratio per *mille*
Santipur	35 0
Beauleah ...	8 9
Burdwan	27 4
Jessore ..	24 5
Kishnagar ..	22 7
Suburbs of Calcutta	21 5

Bowel-complaints	Ratio per *mille*
Hughli	16 1
Suburbs of Calcutta	12·0

Other causes	Ratio per *mille*
Puri .	18 9
Bhagulpur ...	15 4
Gya	14 3
Suburbs of Calcutta	13 8
Purneah	13 9
Serampur	11 8
Dacca	11 7

5. That the death-rates in relation to *Sex*, *Class* and *Age*, were returned at the rates noted below:—

According to Sex.	Ratio per *mille*
Males ...	33 1
Females ..	27 7
Ratio of male deaths to every 100 female deaths ...	136

According to Class.	Ratio per *mille*
Christians ..	13 0
Hindus ...	30 5
Mahomedans ...	31 8
Other classes ...	36 4

According to Age.	Ratio per *mille.*
Under 1 year ...	176 6
1 and under 5 years	40 8
5 „ 10 „	13 5
10 „ 15 „	11 8
15 „ 20 „ ...	17 8
20 „ 30 „ ...	21 7
30 „ 40 „ ...	28 0
40 „ 50 „	21 4
50 „ 60 „	33·3
60 years and upwards ...	81·4

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*

Sanitary Commissioner for Bengal.

The 17th January 1888

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 31st December 1887.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remain as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorised form of age classification.

TEXT-BOOKS FOR VERNACULAR MEDICAL SCHOOLS.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 27th January 1888.

RESOLUTION.

RE-READ—

Resolution, dated the 13th December 1880, on the subject of the selection of Vernacular Text-books in Medicine and Surgery.

Read—

A letter from the Director of Public Instruction, No. 299, dated the 10th January 1888, and enclosures. The Director forwards the report of the Vernacular Medical Text-book Committee on the Bengali translation of Roberts' Hand-book of Medicine by Baboo Gunga Prosad Mookerjea, B.L. and M.B.

In paragraph 5, clause 3, of the Government Resolution, dated the 13th December 1880, on the subject of the selection of vernacular text-books for Medical Schools in Bengal, it was stated as follows:—

"Under *Practice of Medicine* the treatise by Baboo Gunga Prosad Mookerjea, B.L. and M.B., in *Bengali*, may be adopted. If Roberts' *Hand-book of Medicine* is translated by any one, it will be open to Government to substitute it hereafter. But no reward need be offered for any such translation."

Baboo Gunga Prosad Mookerjea, B.L., M.B., has translated into Bengali Roberts' Practice of Medicine, and the translation has been approved by the Medical Text-book Committee. The Lieutenant-Governor is, therefore, now pleased to declare that the translation is approved by Government as the Text-book on Medicine to be used in Medical Schools in which Bengali is the medium of instruction.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

[illegible] the *Govt. of Bengal.*

TEXT-BOOKS FOR VERNACULAR MEDICAL SCHOOLS.

GENERAL DEPARTMENT,—EDUCATION.

Calcutta, the 27th January 1888.

RESOLUTION.

READ—

A letter from the Director of Public Instruction, No. 356, dated 16th January 1888, and its enclosures, regarding text-books for vernacular medical schools.

The Director of Public Instruction has recommended that Baboo Nilratan Adhikari's book on Human Physiology in Bengali, which has been approved by the Vernacular Medical Text-book Committee, should be adopted as a text-book in Physiology in those medical schools in which the medium of instruction is Bengali. The Lieutenant-Governor approves the Director's recommendation.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Director of Public Instruction for information, and that it be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Govt. of Bengal.

MODIFIED FORM OF RENT RECEIPT TO BE USED IN CERTAIN AREAS IN PERGUNNAH BARBAKPORE IN THE RAJSHAHYE DISTRICT.

REVENUE DEPARTMENT—LAND REVENUE.

Calcutta, the 30th January 1888.

RESOLUTION.

READ—

Letter No. 661Rct., dated 7th October 1887, from Commissioner, Rajshahye Division, forwarding for orders a petition from the Raja of Doobulhatty praying for sanction to a modified form of rent receipt.

Read also the following correspondence on the subject of making a survey and record of rights in the estates of the Rajah situated in the Rajshahye district:—

(1). Letter No. 104Rct., dated 27th April 1886, from Commissioner of Rajshahye, and enclosure.
(2). Government order No. 309T—R, dated 17th May 1886, to the Commissioner.
(3). Letter No. 556Rct., dated 2nd September 1886, from Commissioner of Rajshahye.
(4). Government order No. 1372T—R, dated 14th October 1886, to the Commissioner.
(5). Government order No. 725—281LR, dated 7th March 1887, to the Board of Revenue.
(6). Government order No. 1226—469LR, dated 19th April 1887, to the Board of Revenue.
(7). Board's No. 331A, dated 4th May 1887.
(8). Government order No. 1702—655LR, dated 28th May 1887, to the Board of Revenue.
(9). Board's No. 457, dated 1st July 1887.
(10). ,, ,, 499A, dated 21st July 1887.
(11). Government order Nos. 2647-48—942-43LR, dated 29th August 1887, to the Board of Revenue.

In consequence of disputes between Raja Harunath Roy of Doobulhatty in the Rajshahye district and his ryots in the Barbakpore pergunnah regarding rates of rent and areas of holdings, both parties made application to the Collector of Rajshahye that a survey should be made and a record of rights prepared in respect of the lands comprised within the estates named in the margin. It was further proposed by the parties and recommended by the Commissioner that, pending such survey and settlement, the ryots should make lump payments of rents without insisting on specification of details in the receipts granted, and that a form of receipt should be used, to be approved by the Lieutenant-Governor under section 56, clause 3 of the Bengal Tenancy Act. The survey having now been commenced,

No. 162, Kishmat, pergunnah Barbakpore.
,, 165, Gangarampore, pergunnah Barbakpore.
,, 167, Doorgapore Taraf, do. do.
,, 169, Midnapore Taraf, do. do.
,, 1829, Chak Kalidas and Raghunathpore, pergunnah Barbakpore.

the Lieutenant Governor sanctions the use on the estates specified above of a rent receipt in the following form:—

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

RESOLUTION ON THE ADMINISTRATION REPORT OF THE COMMISSIONERS FOR MAKING IMPROVEMENTS IN THE PORT OF CALCUTTA FOR THE YEAR 1886-87.

MUNICIPAL DEPARTMENT—CALCUTTA PORT TRUST.

Calcutta, the 31st January 1888.

RESOLUTION.

READ—

The Administration Report of the Commissioners for making Improvements in the Port of Calcutta for the year 1886-87.

During the year under review, the consolidated debt owing to Government was reduced by Rs. 1,13,346, and a sum of Rs. 96,300 was invested on account of the sinking fund for the debenture loans raised in 1881, 1883 and 1886. On the other hand, the Commissioners received from Government, in addition to advances already received by them amounting to Rs. 23,75,000, further advances to the extent of Rs 31,00,000, to enable them to proceed with the construction of the Kidderpore Docks The total debt of the Port Trust on the 31st March 1887 was as follows:—

		Rs.
Consolidated repayable debt due to Government	...	46 43,335
Port Book debt not repayable	...	17,65,000
Due on 4½ debenture loan of 1881 ...	...	10,00,000
Due on 4½ ditto of 1883 ...	...	20,00,000
Due on 5½ ditto of 1886 ...	...	30,00,000
Recoverable advances received from Government for Dock works to end of 1886 87	...	54,75,000
Total	...	1,78,83 335

Against the above debt, the Commissioners estimate the assets of the Trust, consisting of reserve funds, property in jetties, wharves, and other productive works, and block at the close of the year, at Rs. 2,59,29,806.

2. The income during the year under Revenue Account, exclusive of the opening balance of the year, Rs. 3,94,621, amounted to Rs 23,08,183, against Rs 21,66,136, the income of the previous year The total expenditure, including payments on account of sinking funds and contributions from other ports to Part VII, "Port approaches," was Rs. 27,80,763. The account therefore closed with a net credit balance of Rs 3,87,041 on the 31st March 1887 Under Capital Account the receipts, including the credit balance of Rs. 1,26,502 at the close of the year 1885 86, amounted to Rs. 40,35,203, and expenditure to Rs. 32,99,924. The expenditure was chiefly on account of the new Dock works.

3. During the year the tea warehouse at Armenian Ghât was completed at a further cost of Rs. 4,54,045. The sum of Rs 1,78,920 was spent on alterations made in the petroleum wharf, and Rs. 41 351 on the Howrah foreshore.

Money having been advanced by Government, work on the Kidderpore Docks steadily proceeded. The sum of Rs. 20,41,718 expended on these works formed the largest item in the total of Rs. 27,68,406 spent on new works

Both the income and the expenditure under Part I, "Jetties," increased, with the result that the net revenue was Rs. 4,763 less than that of the previous year. The income from exports slightly increased, and a sum of nearly Rs 50,000 was realized on account of the petroleum wharf. On the other hand, there was a decrease from "imports" due partly to the space available for trading ships being taken up by transports for Burmah, and partly to a reduction in the rents charged for the upper floors of the new warehouses. The earnings from the floating crane also decreased. The increase in expenditure was due to interest charges on capital expenditure, which much more than covered a saving of about Rs. 10,000 in working expenses.

5. The total amount of the receipts from the Inland Vessels' Wharves was Rs. 4,41,103 against Rs. 3,93,087, the receipts of the previous year, but an increase of Rs. 45,159 in the charge for interest had to be paid out of this increased income, nearly thirteen lakhs out of the loan raised in the year

1885-86 having been spent on these wharves. The net revenue was thus Rs. 1,55,098 against Rs. 1,47,146 in 1885-86. It should be noted, however, that out of this net revenue Rs. 67,171 was paid on account of Sinking Fund on loans.

The receipts and expenditure on account of the Strand Bank Lands amounted to Rs. 1,71,450 and Rs. 1,05,778 respectively, against Rs. 1,73,342 and Rs. 1,06,371, the receipts and charges of the previous year. The collections from the Strand Bank Lands belonging to the Trust amounted to Rs. 65,672 as against Rs. 66,971 in the previous year.

There was a large increase in the gains of the Harbour-Masters' Department from the hire of moorings. This was chiefly nominal, and was due to the fact that an unusually large number of vessels which had entered the port during the previous year had their accounts adjusted during the year under review. There was also a saving of about fifteen thousand rupees in expenditure, so that the net revenue this year amounted to Rs 94,806 as against Rs. 3,045 in the year preceding.

The income of the Harbour-Masters' Department amounted to Rs. 5,97,237 against Rs. 5,21,061, the income of the previous year, showing an increase of Rs. 76,176, nearly all of which was due to larger collections on account of mooring hire. The expenditure of the year was Rs. 5,02,351, or Rs. 15,665 less than the expenditure of the previous year, the principal saving being under Dredging Account. The net revenue amounted to Rs. 94,886

7. Only eight vessels met with accidents while in charge of Assistant Harbour-Masters during the year, none of which were serious, and it is satisfactory to observe that in no case was the Assistant Harbour-Master to blame.

8. The usual examination of the moorings was made during the year, and those found defective were replaced by new materials Three new moorings were laid, viz. two fixed moorings at Budge-Budge, and one swinging mooring in the stream below Fort Point. The total number of moorings in the Port at the close of the year was 231, of which 180 were fixed and 51 swinging. The dredger was employed for 139 days during the year at a cost of Rs. 22,122, the rate per 1,000 cubic feet dredged being Rs. 18·3.

9. The number of vessels surveyed during the year under Acts V of 1862, and VI and VII of 1884, for hull and engine certificates, was 265. The number of visits paid to them was 698. The number of passenger and emigrant vessels surveyed under Acts VIII of 1876 and XXI of 1883 was 73. Thirteen boilers and condensing apparatus for emigrant vessels were surveyed under Act XXI of 1883. Thirteen vessels were measured for tonnage, and one for registration under the Merchant Shipping Act of 1854, and two vessels were measured for tonnage under the rules for measurement of inland steamers and flats. Besides these there were during the year surveys of 10 vessels belonging to the Port Commissioners and 17 miscellaneous surveys. Only one ship was found to be unseaworthy.

10. The following table compares the number of passenger and cargo boats surveyed and licensed, and the number of manjees licensed during the year with those of the previous year:—

	1886-87.	1885-86
Passenger boats	1,661	1,808
Cargo "	5,861	5,913
Manjees licensed	8,986	9,009

11. The Port Commissioners' Railway continues to show satisfactory results. During the year under review the receipts amounted to Rs. 1,70,151, being Rs. 9,708 in excess of the receipts of the previous year. A considerable portion of the increase was due to the opening of the Jubilee Bridge at Naihatty, which brought additional traffic to the line. The expenditure, which was higher than that of any previous year, amounted to Rs. 1,26,649. The net revenue was Rs. 43,502. At the close of the year a new agreement was entered into between the Commissioners and the Eastern Bengal State Railway for the working, for a further period of three years, of the through traffic on the Commissioners' riverside line

12. The income under "Port Approaches," which is made up chiefly of contributions from other parts of the Commissioner's accounts, amounted to Rs. 4,74,387 against Rs. 4,27,943, the income of the previous year. The expenditure amounted to Rs. 4,65,281 against Rs. 4,94,133. Among the items of expenditure, Rs. 50,000 is shown as having been provided on account of depreciation. This amount has since been appropriated to make a first payment of £3,000 for a new light-ship which has been ordered out from England to form a reserve in case of emergency. The sum of Rs. 80,000, which had previously been set apart to provide for depreciation, will be similarly appropriated. The importance and necessity of making proper provision for depreciation have, however, been already referred to in connection with the budget estimates for the current year.

13. The channels leading to the port were kept clear, and the light-houses and light-ships preserved in good condition throughout the year. As in the previous year, the only obstruction to navigation of any consequence was caused by the Nynan Tracts. A complete survey of the river from Jiggerkolly to Saugor, and thence to the Bell buoy, was carried out during the year, and this kept the surveying vessels all fully occupied. It was reported to Government at the end of the year that there were no stores at one of the Refuge houses, but this case must have been exceptional, as the present report shows that since the close of the year the houses were visited, and that the stores were found to be in good condition.

14. The thanks of Government are due to the Commissioners for their vigorous management of the affairs of the Trust.

By order of the Lieutenant-Governor of Bengal,

COLMAN MACAULAY,

Secretary to the Government of Bengal.

ESTIMATED OUTTURN OF BHADOI CROP AND WINTER HARVEST OF 1887-88.

No. 51 Agri., dated Calcutta, the 10th January 1888.

From—M. Finucane, Esq., Director of the Department of Land Records and Agriculture, Bengal,

To—The Secretary to the Government of Bengal, Revenue Department.

I have the honour to submit the report called for in your No. 408—9Fam., dated 8th February last, on the estimated outturn of the *bhadoi* crops reaped in August, September and October, and of the winter rice crop, the harvesting of which is now being completed.

2. The figured estimates of area under cultivation and of outturn of crops have no claim to statistical accuracy. They represent merely the opinions of local officers, who supplemented the meagre statistical information as to areas under cultivation with each crop to be found in official compilations relating to the districts of the Lower Provinces, by such further information as they could gather from zemindars, European planters and managers of Government and Wards' estates. Considering the necessarily imperfect manner in which such estimates as these have to be framed in Bengal, they must be accepted with caution, as being in reality little better than guesses. They may, however, as representing the best local opinions regarding the areas to which they relate, be of some use to traders.

3. The last rainy season was generally one of deficient rainfall throughout Bengal, and mainly for this reason the outturn of *bhadoi* crops was as a rule seriously short of the normal.

4. The outturn of the rice crop is reported to be less than the normal in 32 out of the 44 districts of the Lower Provinces. In five districts the present year's crop is reported to be normal, and in seven, some of which suffered from floods last year, the outturn will be better than in the preceding year. On the whole it may be said that the outturn will be somewhat less than the normal, but the deficiency will probably not be more than 2 annas.

Sudder sub-division of Pooree.
Nowada (Gya).
Sudder sub-division of Nuddea.
Ranaghat (Nuddea)
Sudder sub-division of Bankoora.
Jehanabad (Hooghly)
Sudder sub-division of Gya.
Khurswan (Singbhoom).

5. Serious failure of the winter rice is reported from limited areas in the sub-divisions named on the margin, but it is not anticipated that any special measures of Government relief will be required in them. I have myself recently visited the State of Angul, in parts of which an almost total failure of the rice crop was reported, and, after enquiry on the spot, am of opinion that an 8-anna rice crop was harvested in the worst villages, and an average crop in many. I do not therefore think that there is any necessity for starting special relief works in that area at present, and doubt whether any such necessity will arise later on.

6. This report was due on 1st December, but I regret that, as Collectors' reports, though called for by the 15th of November, had not all been received by the 1st of December, when it was necessary for me to leave for Orissa, it was found impossible to submit it on an earlier date. A copy of my circular letter calling for reports on the state and prospects of the crops is annexed

STATEMENT I.—*Estimated outturn of Bhadoi harvest reaped in August, September and October.*

1	2	3	4	5	6	7	8
DISTRICT.	Sub-division.	Total area of sub-division.	Total area estimated to be under cultivation.	Area under cultivation estimated to be under bhadoi crops.	Name of principal bhadoi crops.	Estimated outturn of bhadoi crops expressed in annas	REMARKS.
		Sq. miles.	Sq. miles.	Sq. miles.			
Burdwan ...	Sudder ...	1,242	963	148	Aus rice ...	12 annas...	The crop was affected by deficiency of rain at sowing and harvesting time, and in places near the Damoodar river by floods also at the latter season.
	Raneegunge ..	671	214	8	Ditto ..	12 ,, ...	The crop was affected by deficiency of rain at ploughing and sowing time.
	Cutwa ..	352	274	32	Ditto ...	13 ,,	Crop was affected by excess of rain at sowing time and want of rain before the harvesting time.
	Culna ...	432	324	97	Ditto ...	15 ,, ...	Crop affected by want of rain before the harvesting time.
	District Total	2,697	1,805	285	....	....	The crop in the district generally was injuriously affected by want of rain at almost every stage, and in some places partly by floods from the river Damoodar.
Bankoora .	Sudder ...	1,921	576	86	Aus rice ...	12 annas ..	Deficiency of rainfall shortly after the sowing and transplantation affected to some extent the outturn.
	Bishenpore ...	700	280	42	Ditto ...	15 ,,	
	District Total	2,621	859	128	..		
Beerbhoom .	Sudder ...	1,108	664	66	Aus rice	12 annas ..	Suffered from heavy rain during ploughing and sowing time.
	Ramporehat ..	648	486	48	...	10 ,, .	Suffered near rivers from inundation.
	District Total	1,756	1,150	114	..	....	
Midnapore ..	Sudder ..	3,297	2,265	405	Aus rice, til, marua, kadoo.	15 annas ..	Slightly affected partly by the deficiency of rainfall when the grain was ripening and partly by floods in some portions of the Sudder sub-division.
	Contai ...	849	594	59	Aus rice and biri-kalai.	8 ,, ..	There is very little cultivation of bhadoi crops in this sub-division, the lands not being suited for cultivation of such crops. In Contai, Egra, Potaspur, and Kedgree thana there was no cultivation of bhadoi crops.
	Ghattal .	321	200	12	Aus rice ...	10 ,, ...	The crop is said to have been affected by floods.
	Tumlook ...	620	495	9	Ditto ...	16 ,, ...	No bhadoi crop of any kind except *aus* grows in the sub-division except in thana Panchkura. The season was favourable to the aus.
	District Total	5,087	3,554	485	....	....	
Hooghly ...	Sudder ...	442	265	26	Aus rice ...	10 annas...	Four annas damage was caused by a deficiency of rain during ploughing and two annas loss from the same cause at time of sowing.
	Serampore ...	343	240	43	Ditto ..	10 ,, ...	The rainfall was sufficient during the ploughing time, but deficient at sowing time, and rather inadequate before the harvest.
	Jehanabad ...	438	262	47	Ditto ...	14 ,, ...	There was good and timely rain both for ploughing and sowing, but the crop suffered to some extent owing to floods.
	Howrah ...	173	131	5	Aus rice, jute .	12 ,, ...	(1) Loss of about two annas by deficiency of rainfall after sowing.
	Oolooberiah ...	303	251	15	Ditto	16 ,,	(2) Loss of about two annas by floods.
	District Total	1,699	1,149	136	...	.....	
24-Pergunnahs	Sudder, including Barrackpore.	885	513	123	Aus rice ...	12 annas ..	The crop was affected by deficient rainfall at the time of sowing.
	Diamond Harbour.	417	321	9	Ditto ...	16 ,,	
	Baraset ...	392	243	63	Ditto .	16 ,,	
	Basirhat	360	277	69	Ditto .	12 ,,

1	2	3	4	5	6	7	8
DISTRICT.	Sub-division.	Total area of sub-division.	Total area estimated to be under cultivation.	Area under cultivation estimated to be under bhadoi crops.	Name of principal bhadoi crops.	Estimated outturn of bhadoi crops expressed in annas.	REMARKS.
		Sq. Miles.	Sq. Miles.	Sq. Miles.			
Nuddea ..	Sudder ...	701	484	308	Aus rice, jute, chillies, sugar-cane.	About 10 annas.	In Sudder sub-division prospects were at first excellent; but the deficiency in the rainfall about the time when crop was ripening proved injurious. Some damage was [illegible] by the floods.
	Kushtea ...	558	418	209	Aus rice, jute, kadoo, indigo, kaon.	About 12 annas.	In Kushtea the paddy crop was greatly affected by excessive rainfall just after sowing and by a deficiency of rain in April and May. It is also said to have been affected by increased sterility of the soil due to the flow of water having been checked in some places by the railway.
	Meherpore .	627	489	342	Aus rice, kadoo, kaon, jute, indigo.	10 to 12 annas.	In Meherpore the rains were favourable at ploughing time and unfavourable at sowing time.
	Chuadanga ...	437	218	109	Aus rice ...	About 16 annas.	
	Ranaghat ...	427	256	192	Ditto ... Jute ... Indigo	14 annas... 12 ,, 14 ,,	In Ranaghat the rains, while the grain was ripening, were insufficient, but the crops were not affected otherwise.
	District Total	2,750	1,815	1,160	...	.....	
Jessore	Sudder ...	889	533	213	Aus rice, jute and indigo.	13 annas ..	The crop was somewhat affected by deficiency of rainfall both at the ploughing and sowing time.
	Bongong ...	649	389	194	Aus rice ..	15 ,, ...	
	Narail .	487	171	58	Ditto ...	14 ,, .	
	Magoora ..	425	284	56	Aus rice, jute, til and indigo.	14 ,, ...	
	Jhenidah ...	475	209	16	Aus rice ..	16 ,, ...	
	District Total	2,925	1,586	538	....	.	
Moorshedabad	Sudder ...	767	613	122	Aus rice ...	16 annas...	About four annas of the crop was affected by deficiency of rainfall at the ploughing time.
	Lalbag ...	372	223	44	Ditto ...	12 ,, ...	Deficiency of rainfall at the time of ploughing.
	Jungipore ..	508	444	110	Ditto .	14 ,, ...	The crop has been affected to the extent of two annas by excessive rainfall at sowing time and by flood when in ear.
	Kandi ...	512	409	24	Ditto ...	14 ,,	
	District Total	2,159	1,689	300	......	.....	
Dinagepore ..	Sudder ...	3,251	1,950	234	Aus rice .. Jute ...	13 annas... 7 ,, ...	The aus rice was affected by deficiency of rainfall at sowing time and afterwards by floods.
	Thakurgaon ...	[illegible]	650	149	Aus rice ... Jute ..	14 ,, .. 12 ,, ...	
	District Total	4,118	2,609	383	.. ..	.....	
Rajshahye	Sudder	944	689	254	Aus rice .. Kaon ... Marua ... Til .. Jute ... Indigo ..	11 annas... 16 ,, ... 14 ,, ... 10 ,, ... 10 ,, .. 16 ,, ...	The crops suffered much from early rains in the low lands. In the Nattore sub-division there was a deficiency of rain at the ploughing and sowing time and excess of rain afterwards. The flood brought on by the early rains is the main cause of the short outturn of the *aus* rice crop. The lands in the Sudder being on the whole higher, the outturn is comparatively better there than in the other two sub divisions.
	Nattore .	817	653	195	Aus rice ... Kaon ... Jute ... Til ...	9·5 ,, 11 ,, 8 ,, 9 ,,	
	Nowgong .	603	404	44	Aus rice Jute . Til ... Kaon ..	8 ,, 8 ,, 12 ,, 14 ,,	The outturn of *aus* rice was affected to a large extent and that of the others to some extent by the early rains which flooded the land before the crops grew sufficiently high and submerged the fields.
	District Total	2,364	1,746	493	......	...	
Rungpore .	Rungpore ... Nelphamari ... Kurigram .. Gaibanda ...	3,480	2,788	697	Aus rice ... Jute ...	16 annas .. 12 ,,	All the bhadoi crops suffered somewhat from floods.
Bogra .	Bogra ..	1,448	1,013	202	Aus rice ... Jute .	10 ,, ... 12 ,,	Insufficient rainfall in the early part of the year and then heavy fall of rain and flood at sowing time account for the decreased outturn of bhadoi crop compared with that of last year.
Pubna ...	Sudder ..	957	717	286	Aus rice ... Jute ... Til ... Kaon ..	8 ,, ... 16 ,, 11 ,, 8 ,,	Suffered somewhat from unusual flood before the harvesting time.
	Serajgunge ...	890	667	200	Aus rice ... Jute ... Til . Kaon .	12 ,, ... 16 ,, 12 ,, 12 ,,	Suffered owing to deficient rain at the time the crop was ripening.
	District Total	1,847	1,384	486	......	.....

Mymensingh ...	Sudder ..	1,884	1,093	158	Aus rice, viz.— (a) Hapa. (b) Bowlia. (c) Boron. (d) Baulam (e) Gyal. (f) Bhadam.	15 annas...	Deficient rain in June in thannas Phulpur, Ishwargunge, affected the crop.	
	Atten ..	1,041	730	117	Aus rice	19 „		
	Jamalpore ..	1,244	933	174	Aus rice	10 „ ...	Excessive rainfall while the crop was ripening.	
	Netrokona .	1,375	550	55	Aus rice viz.— (a) Bhadam. (b) Chaola. (c) Surjamukhi. (d) Baulam. (e) Muislem. (f) Powaldaru. (g) Gyal. (h) Bowalia. (i) Lobogoir. (j) Kanakchapa.	10 „ ...	The sudden fall of heavy showers of rain during June last submerged low-lying lands sown with *aus* rice, otherwise the outturn would have been 20 annas.	
	Kishengunge..	744	558	104	Aus rice	8·10	The sudden rise of water in some places in June last had submerged low-lying lands sown with *aus* rice; hence the crop has been affected.	
	District Total	6,288	3,914	610	......	.....		
							Collector's and Deputy Commissioner's remarks.	Commissioner's remarks.
Tipperah ...	Brahmanberia	709	553	138	Aus rice	18annas ..	The *bhadoi* crop has yielded a bumper crop. It was not affected by any of the causes mentioned in column 8 of the printed form	
	Chandpore .	580	406	81	Aus rice ...	16 „ .	This year's rainfall has been below that of the last year; hence better outturn.	The estimate is rather under the mark. I should estimate the crop of the district as a whole at 17 or 18 annas.
	Comillah or Sudder Sub-division.	1,138	633	126	Aus rice	14 „ .	The outturn of *bhadoi* crops on high lands was damaged to a certain extent owing to insufficient rain generally.	
	District Total	2,427	1,592	345	... ..			
Noakholly ...	Sudder ...	1,298	817(b)	204	......	16 annas .	Deficiency of rainfall and salt water inundation affected the *aus* crops on the chur lands. But in other parts it was very fair or good, and on the whole the outturn was fully average.	(b) I consider 817 sq. miles to be under-estimated. The Collector has been asked to state his ground for putting the figures so low. I would put 973·5 sq miles at least.
	Fenny ...	343	216	54	Aus rice	16 „ ...		
	District Total	1,641	1,033	258				
Chittagong ..	Sudder ..	1,630	576	121	Aus rice	16annas (a)	The rainfall was timely, sufficient and well distributed so far as the *aus* rice was concerned. It was no way affected by floods or by any other abnormal conditions.	(a.) I would put this at 18 annas.
	Cox's Bazar	937	633	.....	....	.....	....	The Sub divisional Officer returns this blank, as the amount of early rice grown is so small as to make no appreciable difference in the harvest.
	District Total	2,567	1,209	121	.. .	...

	District Total	4,712	3,449	356	.. ...	.. ...		

* It is impossible to give any estimate of areas in this district. The total number of houses in the district is 5,003, and allowing a *jum* for every house with an average of 2 acres per *jum*, with a full average crop of 100 arhees or 25 maunds per acre, the total outturn of *jum* paddy would be 700,000 maunds or about 50 maunds per house. This year owing to short rainfall the outturn is estimated at eight annas, or half of an average crop. Cotton, the average produce per *jum*, is estimated at about eight maunds. This year the crop promises to be a full average crop, and if rain does not fall in Kartick, the crop will probably be a bumper one, or say 12 maunds per *jum* which would be a total of about 168,000 maunds, of which about 120,000 would be available for export at an average price of Rs. 3 per maund, and which will more than compensate for the short rice crop. The area of plough land 6,500 acres, is altogether too small to affect the district in any way. The *bhadoi* crop covers about one-third of the whole or about 2,000 acres, and like the *jum* crop has been equally affected by the short rainfall in June, July, and August.

Statement II.—Estimated outturn of winter Rice crop of 1887-88.

1	2	3	4	5	6	7	8
DISTRICT.	Sub-division.	Total area of Sub-division.	Total area estimated to be under cultivation.	Total of cultivated area estimated to be under winter rice, aman or hymantic.	Estimated outturn of coming rice crop expressed in annas.	Outturn of winter rice of previous year expressed in annas.	REMARKS.
		Sq. miles.	Sq. miles.	Sq. miles.			
Burdwan ...	Sudder ...	1,242	993	744	12 annas	18 annas ..	Deficiency of rainfall at the time of sowing injuriously affected the crop.
	Raneegunge ...	671	214	171	10 "	12 " ...	Crop injured by deficient rainfall from beginning of September till 2nd week of October. Last year rains were good and the actual outturn was generally as estimated.
	Cutwa... ...	352	274	180	14 "	18 " ...	Want of rain has injuriously affected the crop.
	Culna	432	324	194	10 "	18 " ...	Deficient rainfall has seriously affected the aman.
	District Total	2,697	1,805	1,289	...	......	Deficiency in rain at sowing time and also in the latter half of the monsoon season has had an injurious effect on the crop.
Bankoora ...	Sudder ...	1,921	576	460	8 annas only of an average crop.	14 annas...	The rainfall ceased since August last and the growth of the plants was in consequence much retarded owing to want of sufficient moisture. In high lands they withered away; those on low lands also were affected to some extent.
	Bishenpore ..	700	280	224	10 annas . ..	14 " ...	The deficiency of rain in the beginning of the cultivating season, as well as towards the end of September last, affected this crop considerably.
	District Total	2,621	856	684	......	... .	
Beerbhoom ...	Sudder ...	1,108	664	507	12 annas	16 annas ..	Suffered from draught in September.
	Rampore Hât	648	486	437	12 "	16 "	
	District Total	......	1,150	1,084	......	.... .	
Midnapore ...	Sudder ...	3,297	2,265	933	14 annas	16 annas .	Owing to the deficiency of rain, the crop is poorer this year than that of last year.
	Contai ...	849	594	297	Not less than 12 annas.	14 " ...	The prospects of crops are good, except in parts of Pataspur and Bhagwanpur thanas, where the crops suffered loss through defective drainage. In thana Raghunathpur the rainfall was insufficient during the cultivating season, and was not properly distributed, which caused injury to the crops in that thana.
	Ghattal ...	321	200	117	10 annas	16 " ...	There were no abnormal condition affecting the outturn of the crop as compared with that of the previous year.
	Tumlook ...	620	465	425	16 "	16 "	
	District Total	5,087	3,524	1,772	.....	......	
Hooghly ...	Sudder ...	442	265	106	10 annas	16 annas...	Deficiency in rainfall has affected 6 annas as per column 6 of the aman crop; excessive rainfall affected 4 annas of the estimated outturn of last year's bumper crop.
	Serampore ...	343	240	96	10 to 12 annas ...	20 " ..	(1) The heavy rains commenced rather late and were scanty all through, deficient both at ploughing sowing, and during the time when the rice should have been growing. Late rain at the time when ears were forming helped the crop, but was too late to prevent loss in some cases.
	Jehanabad ...	438	262	78	8 annas	16 " ...	The rainfall last year was abundant, but it has been deficient this year. The crop has consequently been injuriously affected.
	Howrah ...	173	131	113	12 "	13 " ...	Excess of rainfall and floods caused loss otherwise the actual outturn would have been 16 annas. Deficiency of rainfall and floods caused the loss.
	Ulluberiah ...	303	251	200	12 "	12 " ...	The crop this year was affected by scanty rainfall when the plants had grown up.
	District Total	1,699	1,149	593	.. ...	... ..	
24-Pergunnahs	Sudder, including Barrackpore and Suburbs.	885	513	389	12 annas	16 annas...	Rain was deficient this year at the time of transplanting and subsequently; last year the rainfall was extremely favourable.

	District Total	12,044	4,713	......			
Manbhoom ...	Govindpur ...	803	289	132	10 annas ...	12 annas...	The rainfall this year was very fitful. The rains were, generally speaking, late in coming, and in a considerable part of the district the *bad* or higher rice lands remained, to a large extent, uncultivated. Then there was a complete cessation of rain for some time in the latter end of September, and the crops on the higher lands suffered much injury. But for the rains in October, the prospect would have been very gloomy. The late rains have done immense good, and there is now no chance of anything like scarcity. In the beginning of September coarse rice was selling at 30 seers per rupee. All through September the price rose till 6th and 7th instant, it was 18 seers a rupee. It has since fallen to 21 seers.

W. B. BESTIC,

Under-Secy. to the Govt. of Bengal,
P. W. Dept.

QUARTERLY INSPECTIONS OF THE KIDDERPORE DOCK WORKS.

Dated Calcutta, the 21st January 1888.

From—T. H. WICKES, ESQ., and H. CLOETE, ESQ.,
To—The Secretary to the Government of Bengal, Public Works Department.

WE have the honour to report that, in accordance with the orders conveyed in the Government of Bengal's No. 43M.P.I. of the 5th instant, we made the third quarterly inspection of the works in progress at the Kidderpore Docks on the 12th idem.

2. We enclose the usual tabular statement and index plan showing the work done during the quarter, and the total amount executed, which have been prepared by the Superintending Engineer in charge of the Dock Works.

3. The state of the works on the 31st of December last was as follows:—

TEMPORARY WORKS AND PLANT.

Arrangements have been made for laying a line of rails along the boat canal bank, and so connecting the Dock Works and the Akra brick-fields with the Eastern Bengal State Railway system, thereby relieving the block in the traffic on the existing riverside line and its extension to Akra.

PERMANENT WORKS.

Sixty-feet Lock.—Considerable progress was made with the excavation, 21⅓ lakhs of earth were removed during the quarter, and a good start was made in laying the foundations. The work is being pushed on vigorously.

Tidal Basin.—16½ lakhs of earth were excavated, and the construction of the walls will now shortly be proceeded with.

Dock No. 1.—One thousand four hundred and fifty-six running feet of quay wall were founded during the quarter, 7⅝ lakhs of masonry laid, and 8 lakhs of earth removed. This progress was attained, notwithstanding the difficulties that occurred from time to time owing to slips.

Boat Canal.—This work was resumed at the close of the rains, and 29 lakhs cubic feet of earth excavated.

Expenditure.—The total expenditure up to the end of the quarter was Rs. 71,10,286, of which Rs. 49,12,493 were on account of works and Rs 21,97,793 for land.

SANITARY.

The health of the work-people continued to be satisfactory. The average number employed was 7,816, amongst whom there were 34 deaths reported, giving a death-rate of 17·5 per thousand. The sanitary arrangements connected with the works are under the control and supervision of the Medical Officer of the Dock Works.

GENERAL REMARKS.

We consider that the progress of the work has been very satisfactory, and that, as far as can be judged from a quarterly inspection, the quality of the work is all that could be desired.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 28th January 1888.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
BURDWAN DIVN.	1	Burdwan, Jan 28, '88	0·4	Weather—cloudy and cold. Prospects of crops fair. Prices stationary except at Ausgram, where they have risen.
		Culna ...	0·06	
		Raneegunge ...	0·08	
	2	Bankoora „ 28, '88	1·16	Weather—cold and cloudy. Rain has been beneficial to the *rubbi* crops which promises a fair outturn, and has also enabled the cultivators to plough the fields for paddy. Prices continue stationary.
		Bishenpur ...	1·62	
	3	Beerbhoom „ 28, '88	0·34	Weather—cold and cloudy with drizzling rain. Prospects of *rubbi* good. Sugarcane pressing commenced. Price of grains stationary; that of salt increased.
		Rampur Hat ...	0·29	
	4	Midnapur „ 28, '88	... ..	Weather—cold; some heavy showers. *Rubbi* and *boro* doing well and should generally benefit by the rain.
	5	Hooghly „ 28, '88	1·03	Weather—cloudy and at times rainy. Rain will benefit most of the crops on the ground, but damage some. Prospects generally good.
		Serampur ...	0·20	
		Jehanabad ...	0·06	
		Howrah „ 28, '88	0·97	Weather—clear and cold. *Amun* crop nearly all harvested.
		Oolooberya ..	1·52	
		Central Districts.		
PRESIDENCY DIVN.	6	24-Perghs. Jan 31, '88	1·36	Weather—cloudy and rainy during the first part of the week; now clear and unusually cold. Harvesting of *amun* nearly complete. *Rubbi* crops prospering. Cutting and pressing of sugarcane still going on.
	7	Nuddea „ 28, '88	0·61	Weather—seasonable, but cloudy and rainy at times. Prospects of winter crop favourable. Rain wanted in the Chuadanga sub-division. Cutting of sugarcane going on.
		Ranaghat .	0·[illegible]7	
	8	Khoolna „ 28, '88	0·79	Weather—seasonable. Harvesting of *amun* still continues. Winter crops doing well.
	9	Jessore „ 28, '88	1·42	Weather—cool and cloudy. *Amun* harvesting nearly over. Several showers during the latter end of the week have done much good to the winter crops.
		Jhenidah ...	0·05	
		Bongong ...	0·22	
	10	Moorshedabad „ 28, '88	0·28	Weather—cloudy and drizzling rain at intervals. Outturn of *amun* good. *Rubbi* crops promising.
		Kundhee ...	0·57	
		Jungipur ...	0·[illegible]0	
RAJSHAHYE DIVN.	11	Dinagepur Jan. 28, '88	0·10	Weather—cold and cloudy. Harvesting of winter rice not yet finished. Mustard and tobacco doing well. Rice selling at from 20 to 24 seers per rupee.
	12	Rajshahye „ 28, '88	Nil	Weather—generally cloudy with foggy mornings. Harvesting of *amun* nearly finished. *Rubbi* crops good. Prospects of ganja good.
	13	Rungpur „ 28, '88	0·07	Weather—sky cloudy. Rain is wanted. Mustard is being gathered, and land prepared for jute and *aus*. Prospects of crops good.
	14	Bogra „ 28, '88	0·07	Weather—cold and cloudy. *Amun* is being harvested. Pressing of sugarcane proceeding. Gathering of mustard nearly over. Prospects of cold-weather crops good. Price of rice stationary.
	15	Pubna „ 28, '88	0·18	Weather—cloudy with slight rain. Prospects of crops good.
	16	Darjeeling „ 28, '88	0·36	Occasional fall of snow, sleet and rain. State and prospects of crops good.
	17	Julpigoree „ 28, '88	0·64	Weather—very cold; cloudy for the last four days with rain on 26th and 27th. Harvesting of winter rice nearly over. Standing crops doing fairly well. Land is being prepared for *aus*. Common rice 20 seers per rupee at the Sudder station.
		Eastern Districts.		
DACCA DIVISION.	18	Dacca, Jan. 28, '88	0·95	Weather—very cold and cloudy. *Rubbi* crops doing well. Mustard and *kalai* are being harvested. Pressing of sugarcane going on. Ploughing for *aus* paddy commenced. *Boro* paddy being planted. Fodder reported to be insufficient in a few places.
	19	Furreedpur „ 28, '88	0·36	Weather—cloudy and rainy for the last three days; cool. Cold-weather crops doing well everywhere. Prices moderate.
		Goalundo ..	0·40	
	20	Backergunge „ 27, '88	Nil	Weather—seasonable. Prospects of crops good.
	21	Mymensingh „ 27, '88	Nil	Weather—cloudy and cold. State and prospects of all crops satisfactory.
CHITTAGONG DIVN.	22	Chittagong Jan. 31, '88	2·36	Weather—variable. Tea and winter crops benefited by rain. Prices stationary.
	23	Noakholly „ 27, '88	0·03	Weather—a little warm in the early part of the week; latterly cloudy with some rain. *Rubbi* crops doing well. *Amun* harvested.
	24	Tipperah „ 26, '88	Nil	Weather—cloudy and cold. Harvesting of sugarcane still progressing and that of *rubbi* crops only commenced; good outturn expected. Standing crops doing well, but a shower of rain wanted.
	25	Chittagong Hill Tracts. „ 24, '88	Nil	Weather—very cold from about 10 P.M. to 10 A.M. Heavy morning fogs continued up to 22nd. Cloudy in the morning during last two days of the week. Bright and sunshiny during the day throughout the week. A little rain last night (23rd). Harvesting of mustard has begun very generally. Other cold-weather crops doing well. Pressing of sugarcane continues.
		Hill Tipperah „ 25, '88	Nil	Weather—seasonably cold; sky cloudy at times. Prospects of sugarcane and mustard good. No other important crop in the field.

No	District and date of return.	Rainfall at Sudder Station in inches	Character of the weather and state and prospects of the crops.
BEHAR.			
Patna Divn.			
26	Patna Jan 28, '88	0 80	Weather—cloudy and very cold. Threshing of paddy nearly completed. Rain has done much good to the *rubbi* crops. Prospects of poppy fair. Prices stationary.
27	Gya „ 27, '88	1·64	Weather—cool and cloudy. Threshing of paddy nearly finished. Rain has benefited both *rubbi* and poppy, but poppy has slightly been injured by hail in the Nawada sub-division. Opium is being extracted.
28	Shahabad „ 28, '88 Buxar Sasseram Bhabuah	0·99 0 95 1 00 1 10	Weather—cloudy and rainy almost the whole week, latterly cool and clear. Rain has done much good to the *rubbi* crops, prospects are hopeful. Weather is not favourable for poppy. The crop has been doing excellently, but if the weather continues in this state some injury is apprehended.
29	Durbhunga „ 28, '88	0·60	Weather—very cold and cloudy. *Rubbi* crops continue favourable. Rain has much benefited them. Lands are being prepared for indigo. Poppy in flower. Price of rice stationary.
30	Mozufferpur „ 28, '88 Hajipur	0 74 0 29	Weather—cloudy and rainy. Early *rubbi* in ear. Rain beneficial to poppy, indigo and late *rubbi* sowings, but injurious to tobacco.
31	Sarun „ 28, '88 Sewan Gopalgunge	1 20 0 22 0 67	Weather—cloudy throughout the week. Prospects of *rubbi* continue good. Poppy in some places is reported to have been attacked by blight. Lands are being prepared for indigo.
32	Chumparun „ 23, '88	0 35	Weather—cool and cloudy. Rain has been beneficial to *rubbi* crops to some extent. Poppy plants flowering. Prices slightly rising.
Bhagulpore Divn.			
33	Monghyr Jan. 28, '88 Beguserai Jamui	0 54 0 72 0·87	Weather—very cold and cloudy throughout the week. Rain has been generally beneficial to the standing crops; but some damage to pulses in flower is apprehended if the weather does not clear up soon.
34	Bhagulpur „ 23, '88	0 31	Weather very cold; occasionally cloudy; strong west wind prevails. The standing crops are doing well, and the rain has benefited them. Sugar-cane is being pressed. *Tori* (mustard) being reaped. The rain has probably been general throughout the district.
35	Purneah „ 28, '88 Kishengunge Arrareah	0 16 0 08 0 14	Weather—cloudy and cold. Tobacco and mustard are being cut and turning out fairly.
36	Maldah „ 28 '88 Chanchal Shibgunge	0 02 0 07 0 4	Weather—changeable; generally cold, cloudy and foggy, with occasional and very insufficient showers. The harvest of winter rice is over with good outturn. *Kalai* and mustard are still being reaped. The *rubbi* crops are doing well, except in thanah Kharba, where insects have done harm. Transplantation of *boro* paddy has begun. Common rice selling at an average of 21¼ seers per rupee.
37	Sonthal Perghs. „ 28, '88 Deoghur Rajmahal	0 43 0 32 0 09	Weather—cloudy and damp with slight showers. Prospects of crops unchanged; rain not sufficient to cause much improvement.
ORISSA.			
Orissa Divn.			
38	Cuttack Jan. 27, '88	0 42	Weather—cloudy and cool. Reaping of *sarad* rice still continues in some places. *Dalua* rice doing well. Common rice sold at 19¾ to 21¼ seers per rupee in town. Rain injurious to mango trees, which are in blossom.
39	Pooree „ 26, '88	Nil	Weather—seasonable. Threshing of *sarad* (winter rice) continues. *Dalua* crops are doing well. Common rice 24 seers 3 chittacks per rupee in the Sudder sub-division and 25 seers 11 chittacks in the Khoorda sub-division.
40	Balasore „ 27, '88	0·19	Weather—cold and cloudy. Harvesting of paddy completed. Threshing goes on. *Rubbi* crops are being gathered.
CHOTA NAGPORE.			
South-West Frontier Agency.			
Chota Nagpore Divn.			
41	Hazaribagh, Jan. 27, '88	1 10	Weather—cloudy and cold. Rain on the 23rd and 26th. The hail which accompanied the rain of the 26th will cause slight damage to the mustard and wheat in ear, while the rain will improve prospects generally. Sugar-cane continues to be pressed. Cattle-disease still prevails.
42	Lohardugga „ 28, '88 Palamow	0·59 0 67	Weather—cloudy and rainy. Prospects of *rubbi* fair. Prices steady.
43	Singbhoom „ 27, '88	0 92	Weather—rainy and cold. Rain has fallen all over the district. It will improve the prospects of the *rubbi* crops still on the ground, such as gram and pulses, and will also allow the ploughing and preparation of the ground for the next sowings.
44	Manbhoom „ 28, '88	1·1	Weather—cold, cloudy and rainy for the most part of the week. Sugarcane is being cut and *goor* manufactured. Prospects of cold-weather crops improved by rain. Mustard indifferent. Rice selling at from 16 seers per rupee at Jhalda and Jeypore to 24 seers per rupee at Ichhagor. Cattle-pox in Gourangdihi thana.

Published for general information.

CALCUTTA, REVENUE DEPT.;
The 31st January 1888.

P. NOLAN,
Secy. to the Govt. of Bengal.

The following Statement shows the Quantities of the Principal Staples of Traffic imported into Calcutta from the Interior during the month of October 1887.

IMPORTS INTO CALCUTTA.

Whence imported.	FOOD-GRAINS.							FIBROUS PRODUCTS.		OIL-SEEDS.		Tea, Indian.	Cotton, raw.	Silk, raw.	SUGAR.		TOBACCO.	
	RICE AND PADDY.			Wheat.	Gram and pulses.	Other food-grains.	Total.	Jute, raw.	Gunny-bags.†	Linseed.	Mustard-seed.				Drained.	Un-drained.	Bis-path.	Other kinds.
	Rice.	* Paddy.	Total (in rice).

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten [illegible]
The *humidity* of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number[illegible] are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past [illegible] station in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredths of an inch fell.

for the week ending Friday, the 27th of January 1888.

Average humidity at 10 A.M.	Average cloud amount at 10 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	Since 1st of month. Mean for district.	Since 1st of month. Normal mean.	Since 1st of month. Variation.	Since 15th May 1887. Mean for district.	Since 15th May 1887. Normal mean.	Since 15th May 1887. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 31*st January* 1888.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 27TH OF JANUARY 1888.

THE meteorological conditions of the past week in Bengal have been mainly dependent on the development and advance of an area of barometric depression which made its appearance over Northern India, and which afterwards drifted in a south-easterly direction over South Orissa and across the Bay of Bengal. On Friday the 20th, or the last day of the previous week, the weather conditions over the whole of India were fairly normal, except that a large low pressure area was appearing, the centre of which was south of Quetta and west of Jacobabad. On the 21st the area of low pressure moved to the east-south-eastward, and a large diffused depression existed over Sind, Guzerat, Central India and the Berars. On the 22nd the depression concentrated and became rather more local, and the centre appeared to the west of Ajmere and Jeypore. On the 23rd the depression travelled slowly south-eastward, and the centre was near Seoni in the Central Provinces, while on the 24th it had advanced to near Raipur. On the 25th and 26th the depression continued its east-south-easterly advance, and on the 27th it was near Gopalpur, and it subsequently crossed the Bay of Bengal to Akyab. This depression or feeble storm has naturally very materially influenced the weather in Bengal, and the usual north-east monsoon conditions became almost entirely reversed. The reversal of the conditions commenced in the western and northern districts and gradually spread over the eastern and south-eastern. Thus from about the 22nd skies clouded over and rain commenced to fall in South Behar and Chutia Nagpur; these conditions extended to parts of South-West Bengal on the 23rd, and on the 26th and 27th disturbed conditions existed over the whole province and moderate to heavy rain became general in all districts. At the same time the northerly wind current which had been previously blowing over Bengal became almost reversed, and light southerly winds were reported in many instances. Humidity also rose very rapidly, while the night temperatures increased, though the day temperatures still remained low. Thus at the close of the week dull gloomy weather with rain and decidedly low day temperatures prevailed generally over the province.

Barometer.—Pressure was increasing at the commencement of the week, but from the 24th a rather rapid fall set in, owing to the advance of the depression. The falling barometer then lasted till the end of the week. The mean pressure for the whole week for the whole province has, however, been in excess of the normal by 0·02 inch. The excess pressure has, however, been largest in the north of the province, where at Durbhunga it has equalled 0·057 inch, while in the southern districts the excess has been generally small, and at False Point the pressure during the week has been even slightly in defect, thus showing that the southern districts of the province were being most affected by the advancing depression.

Temperature.—The mean temperature for the week has in most districts been largely below the normal; thus in Chutia Nagpur and South Behar the defect of the actual from the normal mean temperature has been between 4° and 5°, in North Behar and South-West Bengal the defect has been about 3°, and in East and North Bengal it has equalled about 1°, though in Orissa the small defect of 0·6° has been registered. For the whole province the mean temperature of the week has been 2·4° below the normal.

As has been previously stated, the day or maximum temperatures have shown the greatest deficiency owing to the cloudy weather and rainfall, and thus at some stations the average maximum or day temperature for the week has been 7° and 8° below the normal, while at Hazaribagh and Gya the defect has been between 8° and 9.° That the defects have been principally in the day temperatures is seen from the figures in the following table, where the average maximum, minimum and mean temperatures for the week at nine typical selected stations in different districts of the province are compared with the normal values for the same period. It will be seen that the average maximum or day temperature of these nine stations has been 5·8° below the normal, while the average of the night or minimum temperature has been only 0·6° in defect

Table showing the excess or defect of the actual temperature from the normal mean for the week ending the 27th January 1888.

	Normal mean maximum temperature for the week ending 27th January.	Actual mean maximum temperature for the week ending 27th January 1888.	Excess or defect of the actual temperature from the normal mean.	Normal mean minimum temperature for the week ending 27th January.	Actual mean minimum temperature for the week ending 27th January 1888.	Excess or defect of the actual temperature from the normal mean.	Normal mean daily temperature for the week ending 27th January.	Actual mean daily temperature for the week ending 27th January 1888.	Excess or defect of the actual temperature from the normal mean.

Darjeeling	44·5	40·0	−4·5	33·6	32·6	−1·0	39·1	36·3	−2·8

Rainfall.—The causes of the occurrence of the general rainfall during the week have already been discussed. Rainfall has been heaviest in Chutia Nagpur, South-Behar and South-West Bengal, where the amounts have averaged almost an inch; in Orissa and East Bengal the falls have equalled an average amount of nearly two-thirds of an inch, and in North Behar a general fall of about half an inch has been received. The rainfall has been smallest in amount in North Bengal, where, up to the close of the week, the average fall had only amounted to 0·15 inch. For the whole province there has therefore been a general average fall of 0·64 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 27th of January 1888:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, p passing temporary showers, t thunder, < lightning, ⌓ dew, ≡ fog.

A. PEDLER,

for Offg. Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

Calcutta, the 30th January 1888.

MEMORANDUM.

THE table annexed to this memorandum shows:—

1. That during the week ending 7th January 1888, the birth and death-rates of the principal Municipalities in Bengal amounted to 21 0 and 26·9 per 1,000 of population, respectively, as opposed to 25·6 and 30·7 per 1,000 respectively, in the preceding week ending 31st December, indicating a very considerable decrease in the registration of both.

2. That they were registered in the highest proportions by the following Municipalities:—

Births.

	Ratio per *mille*.
Narainganj	49·7
Howrah	30·3
Durbhanga	28 3
Hughli	28·2
Bhagulpur	28·1

Deaths.

	Ratio per *mille*
Suburbs of Calcutta	48·6
Utterpara	37·8
Kishnagar	37·8
Beauleah	36·8
Serampur	35·4
Narainganj	33·1
Hughli	30·9
Howrah	30·3
Burdwan	29·0

3. That, contrasted with the results of the preceeding week, it appears that there occurred a sensible decrease of mortality from fever and bowel-complaints, notably from the former; fractional decreases in fatal results from cholera and the maladies grouped under the head of "Other causes," and no variation in fatality from small-pox and injury:—

	Ratio per *mille* during the weeks ending— 7th Jan. 1888.	31st Dec. 1887.
Cholera	2·9	3·3
Small-pox	·03	·03
Fever	11·2	13·3
Bowel-complaints	4·4	5·5
Injury	·2	·2
Other causes	8·1	8·3

4. That in local incidence of the diseases above named, while no Municipality presented noticeably high mortality from small-pox, bowel-complaints and injury, the following Municipalities exhibited the death-rates noted opposite them from cholera, fever and "other causes."

Cholera.

	Ratio per *mille*.
Santipur ...	14 0
Suburbs of Calcutta ...	10·1
Dacca ...	3·2

Fever.

	Ratio per *mille*.
Beauleah ...	31·5
Narainganj ...	29·0
Kishnagar ...	24·5

Other causes.

	Ratio per *mille*.
Serampur ...	13·7
Suburbs of Calcutta ...	13·4
Gya ...	13·0
Kishnagar ...	11·3
Bhagulpur ...	10·9
Puri ...	10·5

5. That the mortality referable to *Sex*, *Class* and *Age*, stood as follows:—

According to Sex.

	Ratio per *mille*
Males	27·1
Females	26·7
Ratio of male deaths to every 100 female deaths ...	115

According to Class.

	Ratio per *mille*.
Christians	26·1
Hindus	26·8
Mahomedans ...	27·5

According to Age.

	Ratio per *mille*.
Under 1 year ...	174·9
1 and under 5 years ...	30·3
5 " 10 " ...	15·1
10 " 15 " ...	7·2
15 " 20 " ...	19·9
20 " 30 " ...	18 0
30 " 40 " ...	19·8
40 " 50 " ...	22·4
50 " 60 " ...	28 4
60 years and upwards ...	80·1

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

The 28th January 1888.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The [illegible] of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans here alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorised form of age classification.

Includes Dacca and excludes local traffic of the Northern Bengal and Kaunea-Dharlla Railways during 1886.

INCREASES.

	Tons.
Coal	2,130
For Railway and Flotilla purposes principally.	
Cotton piece-goods	1,057
Due to large despatches to up-country marts on the occasion of the poojahs.	
Rice	1,572
From the northern section principally.	
Grains	3,384
Good crops and a favourable market.	
Jute	10,944
This increase is principally due to the interruption to traffic in October 1886 caused by the failure of the Pachooria bridge.	
Gunny-bags	454
Corresponding with the increase in grains and seeds.	
Metals (brass and copper wrought)	586
Manufactures for domestic purposes, &c.	
Oil-seeds	425
Due to an improvement in the English market.	
Railway plant	655
For repairs and renewals.	
Salt	974
For the hide exporting stations principally.	

DECREASES.

The decrease appearing under hides, oils and tea are comparatively insignificant and are attributable to ordinary fluctuations.

CALCUTTA, *the* 19*th December* 1887.

F. P. QUINIAN, *Examiner of Accounts.*

Total	1,523	5,416	1,194	1,207	6,939	2,401	4,849	311

INCREASES.

	Tons.
Rice	103
From Singhia station principally.	
Jute	3,606
From Singhia and Khoolna stations principally.	
Betelnuts	
For export to British Burma.	
Sugar	167
This increase is due to a slight improvement in the market which has been for some months past in a depressed condition.	

DECREASES.

Coal	210
Due to sufficiency of stocks at Khoolna, Bongong and Nowapara for Railway and Flotilla purposes.	

CALCUTTA, *the 30th January* 1888.

F. P. QUINLAN, *Examiner of Accounts.*

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 and 25 Vic., Cap. 67.

The Council met at the Council Chamber on Saturday, the 28th January, 1888, at 11 A.M.

Present:

The HON. SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding*.
The HON. G. C. PAUL, C.I.E., Advocate-General of Bengal.
The HON. H. J. REYNOLDS, C.S.I.
The HON. C. P. L. MACAULAY, C.I.E.
The HON. T. T. ALLEN.
The HON. SIR HENRY HARRISON, KT.
The HON. SIR ALFRED CROFT, K.C.I.E.
The HON. MOULVIE ABDUL JUBBAR.
The HON. G. IRVING.
The HON. BABU KALI NATH MITTER.
The HON. DR MAHENDRALAL SIRCAR, C.I.E.
The HON. C. H. MOORE.
The HON. DR. GOOROO DAS BANERJEE.

CALCUTTA AND SUBURBAN MUNICIPALITIES AMALGAMATION BILL.

HIS HONOUR THE PRESIDENT said:—Before calling upon the Hon. Sir Henry Harrison to make the motion which stands in his name, I have a few suggestions to offer to the Council as to the best method of proceeding with the business before us. I have noticed that the amendments which have been printed are rather confusing. We have the same amendments proposed in different words by different members of the Council, and we have also the same amendments proposed two or three times in different sections of the Bill. But on looking into the amendments I found that they all group themselves into two or three different heads, and by grouping them in this way we shall be able to raise debates practically on the different heads to which the amendments belong, and then we can put to the vote the amendments separately under each head; and with the permission of the Council I propose to do so. For instance, the first question raised in the amendments is that of the amalgamation of the Suburbs with Calcutta. Technically speaking, these amendments fall under Chapter I, which is not now before the Council. Chapter I being, as I fancy is usual in drafting, the chapter of definitions, is left to the last. I think in all Select Committees it is usual to leave the settlement of the definitions virtually until you have the whole Bill ready. On the other hand, it will obviously be unreasonable to go on discussing the constitution of the Municipality without allowing the question as to the amalgamation of the Suburbs to be raised, because the whole object of the Bill is really to provide for the amalgamation of the Suburbs with the Town; and if amalgamation is to be refused, why the whole Bill will go. It will be observed that amendments Nos. 1 to 4 deal with the question of amalgamation, and that amendments Nos. 7 to 9 are dependent upon that question. I, therefore, propose that that question be first discussed. That might, if the hon. member agrees, be discussed under amendment No. 7 which stands in his name, and in that case I would take amendment No. 7 first. On the other hand, although not strictly in order, I shall not in the least object to amendment No. 1 being put as it is, although that part of the Bill is not before us. But as at present advised, I propose that we should take amendment No. 7 first and raise a debate as to the amalgamation on that amendment.

The next group of amendments touches the question of the number of the Commissioners and the proportion of nominees. It is difficult to separate these two questions; they are mixed up in the amendment and in the drafting of the Bill, and I do not see how they can be taken separately. It will be observed that amendments Nos. 10 to 17 all touch upon that point. Then amendments Nos 18 and 19 are separate, and they do not come under any of these groups: and again amendments Nos. 21 to 23 are all amendments touching a subsequent point, not as to the number of Commissioners, but as to how they are to be distributed. So that leaving out amendments Nos. 17 and 18, we may divide the amendments into three groups—1st, as to amalgamation; 2ndly, as to the number of Commissioners and proportion of nominees; and 3rdly, as to the distribution of the Commissioners, and I shall ask the hon. member who proposes the first three or four amendments to deal first with the question of amalgamation, and when that has been discussed I will put his amendment to the vote. I shall then ask that the question of the number of the Commissioners and the proportion of nominees be brought forward ; and thirdly, the question as to the distribution of the Commissioners, and I shall then put these to the vote. That is what I propose to do with the approval of the Council.

The HON. SIR HENRY HARRISON moved that the further preliminary report of the Select Committee on the Bill to consolidate and amend the law relating to the municipal affairs of the Town and Suburbs of Calcutta be taken into consideration in order to the settlement of the clauses of the Bill.

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON also moved that the clauses of Chapter II, Part I, of the Bill be considered for settlement in the form recommended by the Select Committee.

The motion was put to the vote and carried.

The HON. DR. GOOROO DAS BANERJEE moved that in section 5 the words "and all rights and interests in immoveable property situated within the area by this Act added to the Town of Calcutta, which are now vested in or held in trust for the Commissioners of the Suburbs of Calcutta" be omitted. He said:—This implies that I oppose the principle of amalgamation on which the definition of the Bill is founded, but technically speaking that *definition* is not before the Council. But as Chapter II, Part I, is before the Council, and as section 5 refers to that Chapter, my amendment that this portion of section 5 be omitted, implies that the scheme of amalgamation on which this section and the subsequent section, and the other provisions of Part I, Chapter II, are based, should not be accepted. In moving this amendment I am bound to say that I speak with some hesitation and diffidence, seeing that my views are opposed not only to opinions which are certainly entitled to very great respect, but may be taken to be opposed to already settled and accepted principles. Nevertheless there are certain objections against the principle which, to my humble apprehension, appear so strong that I deem it my duty to place them briefly before the Council for their consideration. First, I submit that the scheme of amalgamation fails to secure the object for which it is intended. That object is to improve the sanitary condition of the Suburbs of Calcutta. Now the scheme proposed is not one of mere federalization of the suburbs and the town, but one of complete amalgamation between the two, with a uniform rate of taxation all round. That means that taxation in the Suburbs is to be at least doubled if not trebled. Now this sudden pressure of increased taxation on the poor population of the Suburbs, a population consisting for the most part of poor clerks, petty shop-keepers and labourers, will inevitably drive a considerable number of them to places beyond the boundary, places which, as we all know, are less suited for purposes of habitation than those where the present crowded bustees are now located. Then, again, we shall have much less efficient conservancy arrangements than we have under the present Suburban Municipality. The result will be that, instead of crowded bustees in the places where they now are, we shall have almost equally crowded and filthy bustees springing up under less advantageous circumstances for purposes of municipal administration, and the diseases which now prevail in the area to be amalgamated will spread in an aggravated form in places in which it will be impracticable to reduce them by adequate conservancy arrangements The town therefore will continue to be as contaminated by adjacent crowded and filthy bustees as it now is.

Then, *secondly*, I submit that the present scheme will impair the efficiency of the municipal administration of the town. The scheme adds to the present town with an area of a little over 6 square miles and with a municipal income of about 28 lakhs of rupees per annum, an additional area of about 12 square miles with an additional income of at most 6 lakhs. It is impossible to understand how this can help affecting materially and prejudicially the efficiency of the present Town Municipality. Nor will it affect the administration merely by reason of the amount of pecuniary resources I venture to think that the time of the higher officers of the Calcutta Corporation is fully occupied in the work they now have before them, and it is not likely they will have sufficient time to undertake the additional work which will necessarily be placed in their hands by the amalgamation; but if they have spare time in their hands, no doubt the northern portion of the present town needs all their time and energy being devoted to its municipal improvement.

Thirdly, I submit that the scheme of amalgamation will be attended with injustice and hardship in the area proposed to be taken up. The rate of taxation being uniform all round—the taxation in the Suburbs, as I have already said, being increased two-fold, if not actually three-fold—it will naturally raise expectations in the Suburban residents to have the same municipal advantages given to them that the present town enjoys; and no doubt they will be justly entitled to all those advantages But will it be possible for the new municipality with every possible economy to give them anything like those advantages? It is difficult to see how an income of 34 or 35 lakhs with an area of over 18 square miles can do what an income of 28 lakhs has done for the

present town area of 6 square miles, and this after making all due allowances for differences in respect of density of population in the town and Suburbs.

In the next place the proposed amalgamation will destroy the homogeneous character of the present town. At present the municipal boundaries of the Town of Calcutta are co-extensive with the ordinary civil and criminal jurisdiction of the High Court. Under the proposed scheme, part of the municipal town will be subject to the ordinary original civil and criminal jurisdiction of the High Court, and another large part of it will be subject to other jurisdictions. And this will be no more theoretical anomaly, but will lead in many cases, as in the case of prosecutions for municipal offences, to appreciable practical inconvenience. The municipality will have to keep two sets of officers—one to conduct prosecutions in the Calcutta Police Court, another to prosecute offenders either in the Sealdah Joint-Magistrate's Court or in the Alipore Court.

Lastly, I submit that, whilst the proposed scheme is open to these objections, it is not after all necessary. When I say this, I do not for a moment mean to say that the sanitary condition of the Suburbs does not stand in need of immediate improvement, or that it is anything like what it should be. I quite agree with those enlightened members of the European community who first drew public attention to the subject, and to whom our best thanks are due; but what I do submit is that improvements need not be effected in this sudden and forced manner by creating such a large disturbance in the existing state of things, but that it might be effected by slow degrees under existing arrangements. The failure of the Suburban Municipality to cope with the evil up to this time need not make us despair. In the first place the evil complained of is due to certain inevitable causes. I do not mean to say that under measures of sanitary improvement, well directed, the death-rate in the Suburbs may not be reduced; but I beg leave to point out to those who criticise the administration of the Suburban Municipality, that there is one cause of that death-rate which is independent of the sanitary condition of the Suburbs as far as it can be affected or altered by any municipality. The population of the Suburbs consists, as I have said, of poor clerks and shop-keepers and labourers, and as it is well known that they do not enjoy the means of living in a style such as the majority of the residents of the town, they must necessarily fall easy victims to disease. Death must create greater havoc amongst the poor than amongst the wealthy. Therefore poverty must be remembered as being one of the factors in the case, and so far as it is a factor the Suburbs cannot be improved unless the condition of the residents is improved. Then there is another matter to be borne in mind. The newly constituted municipality has hardly yet had a fair trial. The Suburban area is being divided into tolerably manageable wards, and the constitution of the Suburbs placed on a popular and broad basis. If it is allowed to have a longer term of trial, and if, as the Government of India suggest, power is given to the Government by this Bill to alter the limits of the municipality from time to time, the existence of this power in the Local Government will produce a most wholesome influence on the municipal administration of the Suburbs, and will make the Suburban Municipality strain every nerve to effect improvements, for they will find that necessary to ensure their own existence. If in addition to this they have aid from the Government, and if the Calcutta Corporation augment the income of the municipality by occasional contributions in accordance with an amendment which I shall have the honour to move in its turn, under those favourable conditions the Suburban Municipality may produce the desired effect, slowly though it be, yet surely; and then, as I suggest, if power is vested in the Local Government to alter the limits from time to time, the ultimate remedy, viz. amalgamation, may be resorted to if all this fails, and then without its being open to objection. Then nobody will be able to say that the Suburban Municipality has not had a fair trial, or that the people of the Suburbs have been subjected to taxation without necessity. No one will feel the inequity of the measure, and the people will submit without opposition. Until, however, the Suburban Municipality has had this fair trial, I submit that the forcing of this measure will be attended with hardship, either real or imaginary; and in either case it will give rise to discontent, which ought to be avoided as far as possible.

The Hon. Babu Kali Nath Mitter said: In this mat er I am in this position, that I am to a certain extent responsible for the introduction of this measure, because when the Chairman of the Corporation proposed to make c rtain modifications in the administration of the town so as to aid the Suburban Municipality by extending the water-supply and drainage system, I objected to it on the ground that, while the Suburbs would be benefited, they would not pay the same rates as the town. I therefore recommended that certain parts of the Suburbs be amalgamated with the town so that the measures which the Chairman proposed might be given effect to. That amendment of mine was carried, and that, so far as the Corporation of Calcutta is concerned, is how the matter was disposed of. Therefore I consider myself pledged to su port this measure of amalgamation. I was also a member of the Committee which the Government was pleased to appoint to consider this matter. and in that Committee I also gave my assent to this proposal. I did so after the fullest consideration, and I am not prepared now to withdraw from that position I think it is a deplorable state of things that a person living on one side of a road should not have the same advantages which persons on the other side of the road enjoy; that, although to all intents and purposes the former are members of the town proper, yet as far as sanitary and other measures are concerned, they do not get the same benefit. That is the strongest argument for amalgamation. Then again my hon. friend, the mover of this amendment, forgets that the Government is going to relieve the Corporation of Calcutta from contribution to the Police Fund. That will amount to about 2¾ lakhs of rupees, and this sum will enable the Corporation to raise by loan large sums of money which will certainly bring about a decided improvement in the area to be added to the town. I believe that as far as the Commissioners of the present Corporation are concerned, they will be obliged to devote this sum to the improvement of the Suburbs. Therefore there will be this additional fund at the disposal of the new Corporation should the amalgamation take place. My hon. friend seems to be under the impression that the sanitary condition of the Suburbs will not be improved by the amalgamation. I, on the other hand, hold a totally different opinion. I think that if there be one body mainly responsible for looking after the affairs of the Suburbs and the Town, it will be bound to look into the wants and grievances of every inch of ground entrusted to its care; whereas if you have different bodies they will be guided by their own interests, and not look to the benefit of their neighbours. In illustration of this, I would refer to the question of the water-supply pending between the Suburbs and Calcutta. Although a certain arrangement had been come to, pipes had been laid down, and the Commissioners of Calcutta had done everything for the Suburbs which they had undertaken to do; yet the completion of the scheme, as far as the Suburbs is concerned, is as distant as ever. Therefore it seems to me that the general principle of having one body to administer to the wants of this vast area will be decidedly beneficial. No doubt a very large area is going to be added, but my hon. friend forgets that the area of the Bombay Municipality is 27 square miles or thereabouts, and of the Madras Municipality 21 square miles; why, then, the metropolis of India should be confined to an area of 7 square miles I cannot understand? Of course the question of finance is a very serious one, and ought to be considered in all its bearings The only definite relief which the Government proposes to give in favour of the Corporation will go to a great extent in doing all that is necessary. But a still further sum will be needed. Therefore there is a proposal that the Commissioners should be authorised to raise a duty on petroleum, and it will be unfortunate if that proposal is eliminated from the Act The object of this amalgamation is to take in the urban portions of the Suburbs. It is very desirable that the urban portions of the Suburbs, which to all intents and purposes are at present little towns, such as Entally, Bhowanipore and Kidderpore, should be brought within the town limits; instead of having all these small towns in different directions, it would certainly be better to have one large town. The death-rate of the Suburbs is appalling, and the town to some extent suffers from it. Of course I know that you cannot go on increasing the area of the town for ever, and there must be a Suburb beyond the line we propose to take. But when you

find that small towns are springing up in the Suburbs, areas which should properly be part and parcel of the metropolitan city, they ought to enjoy the same benefits which the town proper enjoys. On these grounds, I am sorry I cannot support the amendment.

The HON. DR. MOHENDRALAL SIRCAR said:—In addition to the reasons advanced by the hon. mover of the amendment, which are entitled to great weight. I oppose the proposed amalgamation on sanitary grounds, the very grounds on which an amalgamation is sought. By amalgamating the Suburbs, or at least the very large portion of the Suburbs contemplated by the Bill, we shall be compelled to extend our underground system of drainage which includes sewerage into this vast area, and I must say that I contemplate with horror such extension and multiplication of our underground sewers. Already the underground sewers were having a most baneful influence on the health of the town Disease generally, and fevers in particular, were becoming more virulent than they ever were before, assuming year after year more of a typhoid or typhus character; and I am afraid that by extending this system to the Suburbs, we shall be gradually converting that vast area into a most prolific source of disease of the typhoid and typhus character. On simple sanitary grounds, therefore, I am obliged to oppose the amalgamation of the Suburbs with the present city. If you can possibly exempt the Suburbs from the extension of the underground system of sewerage, I may have no objection to the amalgamation.

The HON. SIR HENRY HARRISON said:—I suppose the Council will expect me to say a few words on this amalgamation scheme which lies at the root of the entire Bill. I admit that the hon. mover of the amendment has adduced many strong and important reasons for his amendments, he has shown many difficulties in the way of amalgamation; but at the same time it seems to me that what he has not done is just what the Council must do, viz., that he has not weighed the reasons for and against amalgamation, and shown to us how the reasons for the amalgamation are either in themselves insufficient or can be met in any way. Fundamentally the reason for the amalgamation is the manifest inferiority of the health of the Suburbs compared with that of the town. It is perfectly true that he referred to that later on in his speech, but it will be desirable if I state it to the Council in a few words. The ordinary death-rate of the Suburbs as compared with that in the town is as 3 to 2. The death-rate in Calcutta itself is very high, but if we deduct from that rate the deaths from ordinary causes not zymotic, we then come to the death-rate in Calcutta from preventible diseases, which is about 14 per mille against a death-rate in the Suburbs of something like 30. That means more than 2 to 1. Something must be done to remedy this; but the moment we approach questions of improvement, such as the extension of the water-supply, the influence of the Salt Lakes, and other conservancy measures either in the Suburbs or in Calcutta, we are met by the difficulty of co-operation or effective control on the part of the Suburbs. The Hon Babu Kali Nath Mitter has not in any way exaggerated the breakdown of the Suburban Municipality in the matter of the extension of the water-supply. I do not think it possible that the same source of water supply can be utilized by two bodies whose interests are different; and as regards the Salt Water Lakes it is alleged by the Suburban Commissioners and by some other people who take an interest in sanitary matters, that the health of the Suburbs has been materially damaged by the works carried on there by the Calcutta Corporation in the neighbourhood of their eastern boundary. We naturally have mainly looked to our own interests in the operations which we have carried out. If it is true that the health of a portion of the Suburbs has been damaged by the operations near the Salt Lakes, then, obviously, it is only when they belong to us that their complaints will command our attention. It is extremely important that the Suburbs outside Calcutta in its restricted sense should have a proper system of water-supply and drainage under the control of an efficient Municipal body, and these improvements are far more likely to be effected by an Act of this kind than if they are left to a body like the Suburban Commissioners, whose jurisdiction extends from Chitpore

on the north to Garden Reach on the south, with a large intervening area which is included in the town. The hon mover of the amendment has admitted that the Suburbs stand in need of improvement, but he protests against the sudden improvements which are to be forced upon them under this Act. I wish I could anticipate any probability of sudden improvements I am afraid it will be a question between gradual improvements if the Act is passed and the entire absence of improvements if the Bill is thrown out. I was moreover disappointed that the hon member did not show how his gradual improvements are to take place. He speaks of contributions from the Government and from the Town Corporation, and this is precisely what the Bill proposes to do. The Government proposes to remit the police rate, which will amount to some 3 lakhs annually; and the municipality will no doubt contribute in many ways by the assistance and supervision of their officers, who will give part of their time to the work. It can hardly be said that the Suburbs have an efficient Health Officer or Engineer at present The Government will give assistance, but is it not natural that when the Government gives its assistance it should be desirous of giving it to a more organised body than the present one? So that, so far as assistance is concerned, it is precisely what it is now proposed to do. The general conception underlying the Bill is that the Calcutta Corporation should be placed in funds to the extent of 3 lakhs more than they now have at command yearly, and that this amount should be devoted to the improvement of the Suburbs Also that the Suburban taxation should be raised to the Calcutta limit, on the understanding that the extra taxation shall also go for their benefit: thus on the whole it may be said that 5 lakhs more will be available every year to expend on the Suburban area than at present. Here is some tangible scheme of improvement put before the public. By uniting all these Suburbs under one authority, and having 5 lakhs available more than at present, the Suburbs no doubt can be improved. Can they under any other system, if so, what? As to the objection that the Act would involve the introduction of the underground drainage in the Suburbs, there is nothing in the law to provide for this. It was a matter which would be left to the consideration of the Corporation If it was not wise, why should not the hon. member raise his potent voice in the Corporation of which he was so distinguished a Member to object to the scheme being extended? A most important question for the new Corporation would be whether the underground drainage should be extended to the entire Suburbs or only to a portion of it, and it was very likely that a portion of the Suburbs would be included within the drainage system; but that was a question to be considered under the Act and not an objection to the Act. The next objection was that the taxation would be doubled, and that this would drive the poor people outside the limits of the new town. That would be an objection which might be held if the limits were very narrow, but the limits we propose are so large that I am inclined to think that these poor fellows will have nowhere to go, consistently with their work in Calcutta, outside those limits. I hope that, so far from harassing these men, they will be less harassed by taxation than before for special provisions are introduced to keep them and the tax-payers apart. As regards taxation, the objection cuts at the root of all improvement which costs money; without increased taxation where is it to come from? If it comes from the Government it means taxation in some other quarter, and it will be hard to show any reason why the people of other places should be taxed to improve the Suburbs. If the Suburbs are to be improved they must pay for the improvement, as it would be impossible to do it without raising taxation. I think that the argument that the Suburbs will suffer is the least well-founded which can be adduced, because the whole outline of the scheme is the benefit of the Suburbs at the expense of a free gift from the Government. Government is giving up more than 3 lakhs annually, and this sum is to be devoted to the improvement of the Suburbs. So that it really comes to this, that Government is making a present to the Suburbs of some 3 lakhs, to which the condition is attached that it shall be put under a better administration than that which it now has. Therefore I am bound to submit that under the circumstances amalgamation is a necessity, and that the objections against it are more than outweighed by the reasons in favour of it.

The HON. DR. GOOROO DAS BANERJEE said in reply:—The hon. member in charge of the Bill told the Council that I did not very clearly distinguish between what I implied by a sudden and forced change such as the Bill involves, and my concession that the Suburbs urgently needed improvement. I admit that the urban portions of the Suburbs require improvement, but the improvement which is required is only of a sanitary nature. Amalgamation with the town means that the town rates should be levied, as, for instance, the lighting rate, which is by no means essential to the sanitary improvement of the Suburbs. Here is a distinction. The people are poor, still they ought to pay for the sanitary improvements urgently required, but they need not pay the lighting rate as an urgent necessity; as regards lighting, they can afford to wait for a few years. There are other matters of detail in taxation which may be adduced in illustration, and if the amalgamation scheme did not involve an uniform rate of taxation all round, but allowed of varying rates of taxation according to the wants of particular localities, I would not object to the amalgamation scheme. Another point to which I have to refer is the very comprehensive nature of the scheme. It was remarked that the inclusion of the whole of the Suburbs within the town will make it impossible for the poor residents of the Suburbs to go away from the town area. That makes the hardship all the greater: you tax the poor and make it impossible for them to find a place where they can go to escape the taxation. If it were really so, the hardship would be greater, but in truth the hon. member in charge of the Bill is not so hard as that, as he leaves ample space for the poor to go to and to create crowded and filthy bustees in. I refer to what is known as the island area, the area between the Circular Canal and the new canal, which is left out of the scheme. That is by no means a very convenient locality for purposes of habitation, but the poor will go to it and create crowded and filthy bustees there. It was remarked that whilst I pointed out objections to the scheme, I did not show how the necessary improvement would be effected, and it was very forcibly argued that the water-supply and other matters requiring co-operation between the municipal administrations of the two areas are measures which cannot be conveniently carried out unless the whole area is placed under one administration. The difficulty, however, is not insurmountable. First in reference to the water-supply; it is true that the measure has not been carried out as quickly as it ought to have been It took a long time and has not been completed yet, but the reason was because there was the amalgamation scheme before the Council If the Suburban Municipality is allowed to continue, and the amalgamation scheme is given up, the water supply will now be carried out without any further discussion or delay As for differences arising in future, they might be provided for by a short Act providing for the appointment of statutory arbitrators who would decide on matters of difference between the Calcutta and Suburban Municipalities. If such a measure were passed, in future matters which required co-operation between the two municipalities would be arranged without any great difficulty

The Motion being put, the Council divided:—

Ayes 2.	*Noes* 10.
The Hon. Dr Gooroo Das Banerjee	The Hon. C. H. Moore.
The Hon the Advocate-General	The Hon Babu Kali Nath Mitter.
	The Hon. G Irving
	The Hon. Moulvie Abdul Jubbar
	The Hon. Sir Alfred Croft
	The Hon Sir Henry Harrison
	The Hon T T Allen
	The Hon C P L Macaulay.
	The Hon. H J Reynolds
	His Honor the President.

So the motion was negatived.

The HON. DR. GOOROO DAS BANERJEE moved that the following definition be substituted for the definition of "Calcutta" in section 3 of the Bill; and that in lines 3 and 6 respectively of section 15 for the word "twenty-five" the word "twenty one" be substituted:—

"'Calcutta' includes the area enclosed by the following limits, namely—

the southern and western bank of the Circular Canal from the river Hooghly to the

northern side of the Eastern Bengal State Railway bridge, thence along the northern and western edge of the said Railway line, and of the Railway line joining it with the South-Eastern State Railway line, thence along the western edge of the South Eastern Railway line to the point where it meets the Tolljullah road, thence along the southern edge of the said road to its junction with the Ballygunge Circular Road, thence along the southern and western edge of the Ballygunge Circular Road to the point where it meets the Puddopoker road, thence along the southern and western edge of the Puddopoker road and along the southern edge of the Pakoortollah and Chaoolpatty road to the point where the last-named road meets Tolly's Nullah, thence along the eastern and northern banks of Tolly's Nullah to the river Hooghly, and thence along the left bank of the Hooghly to its junction with the Circular Canal, or by such other limits as the Local Government may, from time to time, fix according to the provisions of this Act; but not—

(a) Fort William,
(b) The Esplanade,
(c) That part of Hastings north of the south edge of Clyde Row which has hitherto been excluded from the Municipality of the Town of Calcutta."

The meaning of this amendment in other words is this, that with the limited area indicated above, the number of wards should be 21 instead of 25. The boundaries of the new town ought to be defined in one of the definition clauses of the Bill, as in the above amendment. Before proceeding to explain my objection against the boundary given in the Bill, and my reasons for proposing the boundaries which I suggest, I ought to point out to the Council what the proposed boundary includes, and what the boundary indicated in my amendment is. [The hon. member here exemplified his amendment by reference to a map.] At a glance the Council will see that the boundary proposed in the Bill is by no means a convenient practical boundary. It has a rugged edge all along the Suburbs, whereas the boundary I propose adopts the Circular Canal in the north and its counterpart, Tolly's Nullah, in the south, and the intermediate boundary is much less rugged and is almost straight. If the amalgamation scheme is to be carried out at all, it is only on the ground of the sanitary improvement of the Suburbs, and because the more efficient Municipal administration of the Suburbs requires it. One can understand that there is reason in insisting on incorporating the urban portions of the Suburbs, those portions which are more thickly populated than the rest and which require more efficient arrangements for conservancy, and more efficient Municipal administration in other matters, than the remaining portions. Therefore, as far as the reason of the thing goes, it only requires the incorporation of the really urban portions of the Suburbs. Does the proposed boundary in the Bill include that only, or does it not include a great deal more? I do not wish to be hypercritical, but taking a broad view, I say that it includes the greater portion of the Suburbs which we must agree to accept, but there are other large portions which are not at all of an urban character. In the south and south-west the proposed boundary includes large areas scarcely of an urban character; areas in which there is hardly a *pucca* building, except a few garden-houses here and there, very sparsely distributed, and portions which do not by any means require any complicated system of Municipal conservancy. The proposed boundary then is not necessary for the purpose. But the matter does not stop here. It is not only unnecessary, but it is likely to prove injurious to the efficiency of the Municipal administration of the Town. When you take in the really urban tracts, you relieve the Suburbs of some burdens which the Suburban Municipality is not well able to discharge, and though you throw additional burdens on the town, you give it a good return in the shape of rates and taxes. But by taking in the outlying tracts you add to the burdens of the town, without giving any adequate compensation from such portions in the shape of additional taxation. Further, the proposed scheme of amalgamation will give rise to hardship, injustice and discontent, for whilst you tax the people uniformly all round, you cannot conveniently do for the larger area what you may do for the smaller. If you take only the limited area which I suggest, there will not be that difficulty in giving the additional area the municipal advantages which the present town enjoys that there will be if you take in the whole of the area proposed by the Bill.

I shall follow the suggestion thrown out by the hon. member in charge of the Bill, and weigh the relative conveniences and inconveniences of the two proposals in order to strike a balance. I know it may be said on the

other side that my scheme leaves out Watgunge and a portion of Kidderpore in the south, which are of an urban character and are thickly populated; that it also leaves out the docks which require more careful and more efficient municipal administration. It is true that my scheme leaves out these two parts, and errs by taking in too little; but the other scheme errs by taking in too much, and the question is on which side is the balance of convenience? I venture to think that there is a natural presumption in favour of the existing order of things. It has not been shown that Watgunge is in the same bad condition as Entally, and the portion of the Suburbs between the Circular Road and the Circular Canal, and the burden will be on those who say that it is necessary to take in these additional areas also by reason of their dense population. Then, again, there is an obvious objection that this measure takes in areas which evidently ought not to be taken in. I have also the advantage of having a practically more convenient boundary as compared with the boundary proposed by the Bill. On the whole, therefore, the balance of convenience is on my side. And then it should be borne in mind, as my amendment implies, that power is left in the hands of the Local Government to alter the boundaries from time to time If the docks after their completion should happen to require more efficient municipal administration than the Suburbs can provide, there will be no difficulty in the Local Government ordering the limits of the town to be altered so as to include the docks, and at the same time not to include the large non urban area now proposed to be taken. There is some difference between fixing the boundaries by Statute and fixing them by order of the Executive Government. The Executive Government may, through the agency of any municipality or other convenient agency, have roads laid out which may serve as a boundary. For the present that has not been done, and I think I am right in saying that a good portion of the unnecessary area that has to be taken up is being taken up because in no other way can a convenient boundary be obtained which would be consistent with the inclusion of Kidderpore and the docks. The Executive Government will be under no similar difficulty. It may have a road laid out, so that the Kidderpore Docks may be brought within the limits of the town without including any non urban tracts. I submit that all that can be desired under the present state of things may be done if my amendment is accepted.

The Hon. Sir Henry Harrison said:—I understand that the question we are now discussing is not what the limits of Calcutta should be, because it is possible that the Select Committee or some member of the Council may yet see their way to move a modification in the boundaries now shown in the Bill which it may be right to adopt with advantage. What is now proposed is a most radical modification which would entail the reduction of the wards from 25 to 21. The effect of rejecting this amendment will be to reject the hon. member's boundary, and leave the whole question of the boundary to be settled hereafter. It is very inconvenient that the Council has not before it a proper map which every member may refer to, but the notice of amendments has only been circulated within the last 24 hours. I think, therefore, I am right in assuming that if the amendment be rejected, the question of boundaries will still remain open to be finally settled when we proceed to Part I of the Bill.

[His Honour the President remarked that the rejection of the amendment before the Council would certainly not prevent the Select Committee from altering the definition of "Calcutta," or any member of the Council from proposing a new amendment when the question comes before the Council.]

The Hon. Sir Henry Harrison continued:—On that understanding I must certainly ask the Council not to accept the amendment now before it. It would mutilate the amalgamation scheme. By the line which the hon. member has drawn, Calcutta will not extend to the south of Tolly's Nullah; consequently Alipore, Kidderpore, Watgunge, and the whole of Garden Reach will be omitted. By the hon member's scheme we would go to the head of the docks and there stop Such a policy would be suicidal. What is most necessary is that the Municipality should have the opportunity of watching over and regulating the formation of those blocks of houses

which must inevitably spring up around the docks. As far as the Port Commissioners are concerned, there can be no doubt that everything will be done with proper attention to building regulations and their surroundings, but outside that limit there is a certainty that houses will spring up in a miscellaneous way, and it will be found impossible hereafter to arrange and group them in proper order of streets. The building regulations we are now proposing will prevent in the future the chaotic manner in which houses are now springing up in the town, and these regulations should in the localities surrounding the docks be enforced *ab initio*. It would, therefore, be a matter of the greatest inconvenience if the docks are not now brought within the limits of the town. The difficulty of fixing the best boundary lies in this, that it is impossible to fix a good line, consistently with the inclusion of the docks, which does not take in some agricultural tracts. If any better line can be found, I shall be very glad to accept it; but allowing for the connection of the docks with Sealdah, the Select Committee as at present advised cannot find any better line. The opening of the docks will certainly bring a considerable population to their neighbourhood. When I was in Bombay three years ago, I particularly enquired how the difficulty of dealing with rural lands was got over, and I was informed that there was no difficulty. The lands being assessed at a low rate paid but little, and the advantages in the way of roads and lighting were found sufficient by way of return for the taxation levied on it. In conclusion, I would say that to accept this amendment, by which the docks, with Kidderpore and Watgunge, would be outside the town, would be altogether erroneous.

The HON. DR. MOHENDRALAL SIRCAR said:—I cannot understand why the Kidderpore Docks should be brought within the Municipality of Calcutta. Suppose that after a time another system of docks may be necessary and actually established outside the new limits, should we come to the Legislature and ask that they be declared to be within the limits of the town? Why should not the municipal administration of these docks be confided to some other municipality than that of Calcutta? Why so heavily burden the Calcutta Corporation with it? I support the amendment so far as the definition of the limits of Calcutta goes, but I oppose the reduction of the number of wards.

The Motion being put, the Council divided:—

Ayes 2	*Noes* 11.
The Hon Dr Gooroo Das Banerjee	The Hon. C H. Moore.
The Hon the Advocate-General.	The Hon. Dr. Mohendralal Sircar.
	The Hon Babu Kali Nath Mitter.
	The Hon. G Irving.
	The Hon Moulvie Abdul Jubbar.
	The Hon. Sir Alfred Croft
	The Hon Sir Henry Harrison.
	The Hon T T Allen.
	The Hon C. P. L. Macaulay.
	The Hon H J. Reynolds.
	His Honor the President

So the motion was negatived.

The HON. BABU KALI NATH MITTER said:—My amendments Nos. 6, 11, and 16 are so intimately connected with each other that I shall move them together. They are as follows:—

(6). That in lines 3 and 10 respectively of section 4, for the word "seventy-five" the word "eighty" be substituted.

(11). That in line 1 of section 7, for the word "seventy-five" the word "eighty" be substituted; and that for the word "fifteen" the word "twenty" be substituted

(16). That in line 1 of section 8 the words "of" and "fifty" respectively be omitted, and that after the word "remaining" the word "sixty" be inserted.

For the purposes of the present discussion, I shall assume that the boundaries proposed in the Bill are the boundaries, or something substantially the same. That being so, the present town will have an area of 12 square miles added to it. The present Corporation consists of 72 members, of whom

24 are nominated and 48 are elected. The Bill under which the present constitution was conferred was introduced in 1875, and took fully two years to pass into law. Then the question of numbers was very fully discussed, and as a compromise 72 Commissioners were ultimately agreed to. There was a proposal to fix the number at 60, but that proposal was negatived. At present the town is divided into 18 wards, in some of which 3 Commissioners are elected and in others only 2. If the number of Commissioners stands at 75 as proposed in the Bill, the inevitable result of dividing it into 25 wards, unless my qualifying amendment is adopted, will be that each ward will return 2 members. On this subject we have had several representations submitted to the Council. There are representations in favour of my amendment, and there are also representations against it. The British Indian Association urged that the number should be fixed at 80. They say: "Bearing in mind that the Suburbs will contribute 7 new wards to the town and that two representatives for each of them would give an addition of 14 to the present number of 72, the total should be 86, but as slight reductions in some of the smaller wards will not be objectionable, the Committee would fix the total at 80." That is the figure I propose should be fixed. The Indian Association also fixes the number at 80. Again, the Corporation of Calcutta in discussing this Bill said: "The Commissioners have recommended 90 as the number." As far as I have heard the hon. member in charge of the Bill on the former occasions on which he addressed the Council, I understand he will have no objection to 80 Commissioners, because they would act as an appellate body before whom all questions of importance will be discussed. So that on the question of convenience or inconvenience, I do not think there will be any great inconvenience if the number is increased from 75 to 80. It would only be a difference of 5, but it will have great importance attached to it. Then, as I have said, there are representations against the number of 80. The Chamber of Commerce say: "But the Committee believe that experience has shown the present to be an unwieldy number of representatives, and they would support the suggestion that the number of Commissioners should be reduced rather than increased." There was also a representation from the Calcutta Trades' Association, and in the 7th and 8th paragraphs of their letter they discuss this question. They say: "In thus advocating the due recognition of the claims of the European community, the Committee of the Association are actuated by a desire to secure for the future municipality of Calcutta the services of a number of men eminently qualified to take part in the municipal government of the city. It has hitherto been found impossible, for reasons which are only too well known, to induce a sufficient number of such men to come forward." What those obvious reasons are perhaps we shall be favoured by the hon. member on my left (Mr. Irving), but the reasons are not obvious to me On the contrary, I shall be able to show that there has been little or no interest taken by this body in returning members to the Corporation. They go on to say: "But it now behoves the Government, in view of the strong conviction which exists in the minds of the European community that their interests should be effectually safeguarded, to enact a municipal law that shall make it possible to introduce into the *personnel* of the new Corporation a fair proportion of European Commissioners. The numerical strength of the Corporation, as laid down by the Bill, is the next point to which the Committee desire to invite the attention of His Honour the Lieutenant-Governor. They are still of opinion that a body of seventy-five Commissioners will be unnecessarily large, and would therefore suggest that the number be limited to sixty" I would also point to the letter of the Secretary to the European and Anglo-Indian Defence Association. They complain of there being no adequate European representation, and they give a schedule showing how they would like to see the Commissioners elected. They say that wards 17 and 18, with a population of 11,000, should be amalgamated and should return 2 Commissioners, and that wards 1 and 3 with a population of 51,000 should have 2 members: that wards 15 and 16, with a population of 16,000 should have two members, and that wards 2 and 5 with a population of 62,000 should have only one member. If this is adequate representation, the number of Commissioners can no doubt be reduced, but to my mind it is anything but adequate representation My proposal is that, with the number of 80, the nominated Commissioners be fixed at 20, and that 60 be distributed

amongst the wards. Wards Nos. 1 and 3, 5, 7 and 9, 12, 13, 15, 16 and 17 should return three Commissioners each, and the remaining wards two Commissioners each. There would be this advantage that wards 12, 13, 15, 16 and 17 having three Commissioners each would each be able to return one member of other nationalities, and you would thus have five more members of other nationalities elected, and as the Government instead of nominating 15 Commissioners would nominate 20, there might be five more Commissioners who would be Europeans, and therefore these ten Commissioners would not be either Hindus or Mahomedans. That it would be so there could be no doubt. At the last election in ward No. 12 the last member elected was Mr. Hallett, and if instead of two Commissioners in this ward we had 3, one European Commissioner would certainly come in. The last member elected in ward No. 13 was Dr. Chambers, and again in ward No. 15 Mr. Chick had come in; in ward No. 16 Mr. Doucett, and in ward No. 17 Mr. Gore Brown. So that in these five wards you would be able to elect one of the other nationalities to make up the number. The objection which might possibly be taken is that, in some of the wards, such as 1, 3, 5, 7 and 9, Hindus would come in. But in the other wards 12, 13, 15, 16 and 17 other nationalities would come in. So that my proposal does not in the least affect the interests of the other nationalities The number of nominated Commissioners should be fixed at 20, that is to say, one-fourth of the whole number. I know that the hon. member in charge of the Bill is very much opposed to this reduction. He thinks that the interests of minorities would be very much affected if there was a reduction of five in the number of nominated Commissioners. On the contrary, I shall show that it will do nothing of the sort. If the Council would look at the returns of the four elections which have taken place, the fact will be as clear as possible. When the elective system was first introduced, the number of Hindu voters was 4,556, the number of Mahomedan voters 289, and of other nationalities 199. That showed that the other nationalities took no interest in the elections. The Hindus in the first election returned 41 members, the Mahomedans returned 8 members, and the other nationalities 4. In the next election in 1879 the Hindu voters numbered 6,025, and yet the number of Hindu Commissioners returned was reduced to 39, the Mahomedan voters increased to 604, and kept the same number of Commissioners, the other nationalities advanced to 377, and returned 6 members. Did that show that the other nationalities took any interest in the elections of 1879? Then in 1882 the Hindu voters numbered 9,194, but returned only 32 members; the Mahomedan voters were 850 and returned 5 members; other nationalities had 1,363 voters, and returned 11 members. In 1885 the Hindu voters were 7,827, and returned 27 members; the Mahomedans were 1,064, and elected eight Commissioners, and the other nationalities mustered 1,105, and returned 13 Commissioners. Does not this show conclusively that in proportion as particular communities took interest in the elections they were able to return a larger number of Commissioners? I do not think that 1,105 voters is anything like the largest number which these other nationalities can muster. I believe that number could be multiplied manyfold. It seems to me that the system of elections should not be condemned by those who do not try to work it out properly. Until they really take an interest in the elections, they cannot expect to be elected. At the last elections, to the credit of the Health Society it should be said that they were able to persuade 1,100 persons to register themselves as voters, and the inevitable result was that the number of Commissioners of other nationalities rose from 11 to 13. In the Bill which was introduced in 1876, the Legislature intended to fix the number and proportion of Commissioners in the following way. They intended the number of Hindu Commissioners to be 27, of Mahomedan Commissioners 9, and of other nationalities 18, and 18 were to be appointed by the Government, of whom Hindus and Mahomedans should be 9, and 9 should be appointed from other nationalities. That was how the Select Committee of the Council settled the Bill in the first instance. It was pointed out then that that would introduce a very invidious distinction in the law and was not necessary. Sir Stuart Hogg was violently opposed to the introduction of the elective system, and it is an unfortunate coincidence that Sir Henry Harrison is also violently opposed to the expansion of that system. I hope the majority of the Council will oppose Sir Henry Harrison on this occasion, as they opposed Sir Stuart Hogg then, and I have no doubt that a few years experience will show that Sir Henry Harrison has made a mistake.

Agitation has been raised from time to time against the administration of the town by the Corporation. It was said that the wants of the town were not attended to, to the extent that they should be. It was further stated that the Hindu Commissioners who took a paramount interest in the affairs of the municipality had proved themselves obstructive, and that but for them many other things might have been done. This was a matter on which I feel some delicacy in speaking; but if the reports of the Army Sanitary Commissioners for different years are looked at, I should not have the least hesitation in saying that persons capable of understanding these matters will give their testimony in favour of the Corporation, and not against it. If an Englishman who had been through the northern portion of the town 12 years ago saw its condition now, he would be amazed at the improvement which has since been made. There are in fact parts of it which it would be impossible for him to recognise now. I myself had occasion lately to see a friend living at a place near Sukea's Street. When I first went to the place a few years ago, there were large areas there without any buildings, except here and there some huts But to my surprise when I, the other day, entered the lane, I found buildings on both sides of it, and experienced the greatest difficulty in recognizing my friend's dwelling. So that it is not too much to say that the affairs of the Corporation have on the whole been satisfactorily managed by the present Corporation. Testimony has been borne to this fact by the British Indian Association, and I submit that the testimony of the persons representing that Association goes a great way; they are persons who live in the northern portion of the town, and are therefore able to speak from their own experience If the verdict on the administration of the past ten years shows that the affairs of the Corporation have been successfully managed, I say that it is only right and proper that the further extension of the elective system should be conceded, so that it might be looked upon as a mark of confidence in the Commissioners who have administered the affairs of the town. If Your Honour's predecessor, Sir Richard Temple, notwithstanding the strenuous opposition then raised by the hon. mover of the Bill, was prepared to reduce the proportion of nominated to elected Commissioners to one-fourth, it is not too much to expect Your Honour now to do so. Sir Richard Temple then said:—

"There is one point I wish to mention and to leave the decision entirely in the hands of the Council. It has been impressed upon me by the second of the two deputations which came to see me that it would give great satisfaction if, in the elective sections of the Bill, the proportion of Municipal Commissioners to be appointed by the Government should be reduced from one-third to one-fourth. I have just received a letter from the Chairman of the Indian League, which presses upon me the same view as that which was urged by the very large deputation to which I have referred. That deputation comprised many gentlemen of rank, wealth and station, besides the members of the Indian League, and they certainly urged the point very much upon my attention I understand that they attach very great importance to it. I myself do not see it in the same light. It does not very much matter whether the proportion of nominated Commissioners is one-third or one fourth, as far as the Government is concerned; it is not a point on which the Government is particularly interested. Certainly the Government has no desire to obtain the power of appointing members who would be, as it were, Government nominees; that is not the object with which the section has been introduced. The object of the Council in introducing that section is this, that in the event of the elections not sufficiently representing certain sections of the community, particularly the Mahomedan section of the community and the European section, the Government should have the power of redressing the balance It was for the purpose of this redressing of the balance that the proportion of one-third was taken. I am myself so far sanguine that the elections will on the whole nearly represent the different sections of the community, that I am quite willing to reduce the proportion from one-third to one-fourth, if that shall be the pleasure of the Council"

On that occasion the late Hon. Kristodas Pal and the hon. member opposite (Mr. Reynolds) voted for the proportion of one-fourth, but the majority of the Council was against it. I submit that it is wise now to make the extension which was then denied. In bearing testimony to what has been done, Sir Henry Harrison on one occasion spoke of the good work done by the elected Commissioners. The point, however, in which he considered they had failed was this, that in large questions of improvement they had not come up to the point he had expected. No doubt my hon. friend, from his position in the Corporation, was able to give his views in this matter with great confidence; but I have also been in the Corporation since the elective system was introduced, and my experience on this point is at variance with that of my hon colleague. I think all large questions of importance have been passed as much with the

co-operation of the elected Commissioners as with the co-operation of the other members. I can only recall to my mind three instances where, as far as I am concerned, I believe the majority went wrong. But with these exceptions, I do not remember a single instance in which I had reason to regret what had been done. It has been my privilege to be very often in opposition to the Chairman of the Corporation, and it has been my satisfaction in many cases to find my opposition successful; but it was only with reference to three matters that I have regretted the vote of the majority. Of course it is quite possible to conceive there were occasions in which there might have been difference of opinion, but there are many questions in which there should be no difference of opinion, and on such occasions difference of opinion is to be regretted. It is said that a great deal of time is wasted. There is no use in mincing matters, and if you will pause to consider what that means, you will come to the conclusion that it means absolutely nothing. The Town Council meets almost every Saturday; one-and-a-half or at most three hours are taken up; meetings of the general body of Commissioners are on an average twice a month, and they occupy between two and four hours each time. If my hon. friend (Mr. Irving), who represents the Calcutta Trades' Association, will say that their constituents are not prepared to make these sacrifices, my answer then is that they ought not to have anything to do with the Corporation. I do object that members of the Corporation should, just at the time of voting, attend meetings only when personal questions or questions of great moment are to be considered, without giving any thought to the consideration of the subject, and out-vote those who have taken great interest in the matter. That is a danger to which the Corporation should not remain open. I believe I speak the sentiments of my Hindu and Mahomedan colleagues in the Corporation when I say that they would be well pleased to have European Commissioners who take an interest in the affairs of the municipality. It is a fact well known that European gentlemen who take interest in the affairs of the Corporation are listened to with the greatest respect. Therefore it is idle to say that the Hindu or Mahomedan Commissioners would object to have European gentlemen as their colleagues. On the contrary, they are welcomed if only they take interest in the work. On one occasion Sir Henry Harrison, speaking of the elected Commissioners, was pleased to say that they generally acted in a spirit of parochialism. I very much regret that he has said so. I think his largest supporters have been amongst the elected Commissioners, and most of the important measures have been carried through with their aid. And I believe that the elected Commissioners are not fairly open to that charge. It is strange, however, that while he has said so much of the elected Commissioners, he had nothing to say as to what the nominated Commissioners have done. It is not simply that it is necessary that the Government should retain certain powers in its hands, but the object in retaining such powers should be to enable it to secure an adequate representation. It is not too much to ask you sufficiently to trust the people of Calcutta to elect those who will be able to be of service to them. And remembering that by the present Bill it will be for the Chairman to prepare a list of voters, the difficulty at present experienced of European gentlemen not registering themselves for the purpose of voters will disappear, and consequently they will be able to return a larger number of the Commissioners than as heretofore.

I have already trespassed very long on the time of Your Honour and that of my hon. colleagues; but as this matter is one of very great importance, I hope I shall be excused.

The further consideration of these amendments was postponed.

The Council was adjourned to Saturday, the 4th February, 1888, at 2-30 P.M.

Letter from the Government of India, Revenue and Agricultural Department, No. 915M & E—63-12, dated the 12th December 1887, with enclosures.

Mr. H A. Cockerell, C.S.I., President
Hon'ble Colonel S. T. Trevor.
Mr M. Finucane.
Dr George King
Mr. H H Risley
Major (now Lt.-Colonel) Waterhouse
Mr. H. H Locke.
Surgeon-Major D D Cunningham
Hon'ble A P. MacDonnell.
Mr. A. Pedler.
Mr. M. H. Jackson, Member and Secretary.

By the Resolution of the 2nd May 1885, cited in the preamble, an Executive Committee, consisting of the gentlemen named in the margin, was appointed, and funds were placed at its disposal for the purpose of making arrangements for the Bengal Court in the Colonial and Indian Exhibition of London, 1886. In view of the character and magnitude of the duties connected with these arrangements, it was considered that, although falling within the recognized functions of the Director of the recently established Agricultural Department, they might with advantage be entrusted to a Committee rather than to a single officer, and the Committee as at first constituted was, in the following July, enlarged by the addition of certain members, with the object of enlisting the co-operation of the mercantile community, and thus ensuring an adequate representation of important commodities and manufactures. The Committee's report, reviewed in the Resolution of the 15th July 1886, had been submitted in the preceding April after the collection of exhibits and their transmission to London, and on the separation of the members, its place was taken by the Secretary of the Bengal Economic and Art Museum. On the 1st April 1887, however, that Museum was made over to the custody and control of the Trustees of the Indian Museum, and the post of its Secretary having been abolished, the work in connection with the Indo-Colonial Exhibition was transferred to the newly appointed Assistant Curator, and has since remained in the hands of that official under the control of the Trustees. In their letter of the 9th December 1887, referred to above, the Trustees represented that the work involved a considerable amount of correspondence, and they suggested that, now that the exhibits returned from England had been disposed of, they should be relieved by Government of all that remained to be done.

2. The accounts of the London Exhibition, so far as they relate to Bengal, have been received from the Government of India, and a sum of Rs. 15,121-5-11, representing the price of the exhibits sold, has been placed at the disposal of this Government for distribution to the owners of such exhibits, including the Local Government. The duties which now remain to be performed are as follow:—

(1) the final adjustment of the accounts of the expenditure incurred by the Bengal Executive Committee in connection with the London Exhibition;
(2) the disposal of certain returned exhibits;
(3) the distribution of the money recovered by the sale of exhibits; and
(4) the settlement of any claims that may be made for compensation for lost or damaged exhibits.

In these details are involved which cannot be satisfactorily dealt with by Government, and the Lieutenant-Governor is of opinion that they may best

be entrusted to a Committee, which, he is accordingly pleased to direct, shall consist of the following gentlemen :—

Mr. M. Finucane, *President*.
„ A. Pedler.
„ M. H. Jackson.
„ T. N Mukharji, *Secretary*.

The records and proceedings of the Bengal Executive Committee, which are now in the office of the Economic Section of the Indian Museum, will be placed at the disposal of the Committee thus appointed; and to it will be transferred all correspondence on the subject pending before Government, together with the sum of Rs. 15,121-5-11 received from the Government of India for distribution. It is requested that immediate steps will be taken in the matter.

ORDER—Ordered that this Resolution be published in the *Calcutta Gazette*, and that copies of it be sent to all members of the Committee appointed, to all Commissioners of Divisions, and to the Trustees of the Indian Museum.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

LIBERALITY OF CHOWDHRI Mohadeo PERSHAD, ZEMINDAR OF NANPUR IN MOZUFFERPORE.

No. 321, dated Calcutta, the 2nd February 1888.

From—COLMAN MACAULAY, ESQ., Secretary to the Government of Bengal, Municipal Department,

To—The Commissioner of the Patna Division.

I AM directed to acknowledge the receipt of your letter No. 9G, dated the 9th instant, in which you report that Chowdhri Mohadeo Pershad, zemindar of Nanpur, in the district of Mozufferpore, has offered to defray the cost of replacing the present bridge over the Lakhundai river at Sitamarhee by a new masonry structure. The expenditure is estimated at Rs. 27,000, of which a sum of Rs. 10,000 has already been advanced by the donor The District Board of Mozufferpore have ordered the collection of materials and the preparation of the necessary plans and estimates.

2. In reply, I am directed to state that the Lieutenant-Governor is pleased to accept the offer on behalf of the District Board of Mozufferpore. I am to request that you will be good enough to convey to Chowdhri Mohadeo Pershad an expression of the Lieutenant-Governor's satisfaction at this proof of his public spirit and liberality. This letter will be published in the *Calcutta Gazette*.

* Means for 6 days

Explanation.—*Summary.*—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten ... The *humidity* of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number ... are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 24 ... station in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredths of an inch fell.

Station Bazars of the Districts of Bengal on the 31st January 1888—(concluded.)

Salt.			Wholesale prices per maund of 40 seers. Salt.			Average wages per month. Able-bodied agricultural labourer.			Syce or horse-keeper.			Common mason, carpenter, or blacksmith.			Districts.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 7th February* 1888.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 3RD OF FEBRUARY 1888.

THE meteorology of the week ending the 27th of January had been important from the fact that a well defined barometric depression had marched in a south-easterly direction across the whole of India. It was first noticed near Quetta on the 20th, and on the 27th it had almost reached Gopalpore on the north Madras Coast. The storm had brought disturbed weather over the whole of Northern India, and also in Bengal. At the plains stations moderate to heavy rain had fallen, while along the Himalayas snow fell for several days in succession, and at some stations the falls were reported to be very heavy. At the close of this week, therefore, weather conditions over Bengal were decidedly disturbed; the skies were heavily clouded over a large part of the province, rain had been fairly general, humidity was high, the day temperatures were low, though minimum temperatures were nearly normal, and a light irregular wind current prevailed over the whole province. On the 28th, or the first day of the present week, the barometric depression above referred to had passed into the Bay of Bengal, and on the 29th it was approaching the east coast of the Bay, and its centre was not far from Akyab, while on the 30th it had apparently passed inland into Upper Burma, or had perhaps broken up, and it ceased to exert any further influence on the meteorology of India. With the continued south-easterly movement of the depression, conditions rapidly changed in Bengal; on the 28th rain fell pretty generally in East Bengal and at the stations in and near the hills in North Bengal, while a few showers also fell in Orissa, but after this date skies cleared rapidly, temperature and humidity decreased, and pressure rose very generally, while a strong and very cold northerly wind current flowed over Bengal, the wind current being of a particularly low temperature, owing apparently to the cooling effect of the accumulation of snow on the hills and to the rainfall over Upper India. In fact during the greater part of the week under review the cold weather conditions in Bengal have been present in an exceptionally pronounced form, and temperature has been particularly low, though towards its close it commenced to rise rapidly.

Pressure.—The mean pressure for the week has been largely above the normal in all districts, and taking into consideration only those stations which have submitted observations for a series of years, and which therefore yield reliable averages, the average pressure over the whole province has been 0·072 inch in excess of the normal for the week. The northern districts of the province continue to show the same fact of relatively high pressure when compared with the remainder of the province and thus at Purneah the excess pressure has been 0·1 inch and at Durbhunga it has been 0·098 inch.

Temperature.—At the commencement of the week temperature fell with great rapidity and became exceptionally low, and at some stations during the first four days there was a fall in the minimum temperature of from 10° to 15°. Over the whole province for the week temperature has been 3·8° in defect of the normal, though the defect has been most pronounced in South West Bengal, North Behar and Chutia Nagpur, where it has amounted to nearly 5°.

The day temperatures have been exceptionally low over the whole province during the week, and at some stations, such as Purneah, the maximum temperatures have been nearly 10° below the normal. The distribution of the temperature during the week is best seen from the figures in the following table, where the average maximum, minimum and mean temperatures for the week at nine typical stations in different districts of the province are given and compared with normal values for the same period. It will be seen that the average of the day or maximum temperatures at these stations has been 6·8° below the normal, while the night temperatures have been only 2·9° below it:—

Table showing the excess or defect of the actual mean temperature from the normal for the week ending the 3rd February 1888.

	Normal mean maximum temperature for the week ending 3rd February.	Actual mean maximum temperature for the week ending 3rd February 1888.	Excess or defect of the actual from the normal mean.	Normal mean minimum temperature for the week ending 3rd February.	Actual mean minimum temperature for the week ending 3rd February 1888.	Excess or defect of the actual from the normal mean.	Normal mean daily temperature for the week ending 3rd February.	Actual mean daily temperature for the week ending 3rd February 1888.	Excess or defect of the actual from the normal mean

Darjeeling	43·1	37·3	−5·8	32·7	30·4	−2·3	37·9	33·9	−4·0

Rainfall—Has been confined practically to East Bengal and Orissa and to the hill districts of North Bengal. East Bengal has received an average fall of about two-thirds of

an inch, and Orissa about a fifth of an inch, but the falls elsewhere only average a few hundredths of an inch. The heaviest rainfalls reported were 5·14 inches at Cox's Bazar on the 28th, and nearly two inches at Kutubdea and Ruma on the same day. The Mymensingh district, on the other hand, received no rain.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 3rd of February 1888:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of January.		Since 15th May 1887.

The mean maximum equilibrium temperature of solar radiation during the month	123·7		
The mean difference of sun and air temperatures	49 7		
The greatest sun temperature	133 1	24th	
The greatest excess of sun over air temperature	59·0	24th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	45·6		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	9·5		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	13·3	13th	
	Miles.		
The mean movement of the wind per day	47·9		
The greatest movement of the wind in one day	112 0	28th	
The greatest movement of the wind in one hour	11·0	29th, 11 to noon, and noon to 1 P.M.	

The number of hours with winds from each of the 8 points—

N. 222, NE. 65, E. 18, SE. 3, S. 2, SW. 9, W. 47, NW. 126, Calm 252.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 3 feet higher at Alipore, and, other things being equal, reads therefore ·003 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 2·5° lower; and, finally, the thermometer which has furnished the record of temperature at the Surveyor-General's Office during the last 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

The average fall of the corresponding period for 24 years, S. G.'s Office	0·47

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

≡ fog, ⌓ dew.

The mean temperature of the seven days	...	...	...	65·8
The extreme variation of temperature	...	...	...	35·8
The maximum temperature	...	...	...	83·9
				%
The mean relative humidity	..	...	...	61
				Inches.
The total fall of rain from 29th January to 4th February 1888			...	Nil

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
The 6th February 1888.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

THE chief incidents in connection with the vital statistics of the principal Municipalities in Bengal, for the week ending 14th January 1888, are the following:—

1. That births and deaths were registered in the proportions per 1,000 of population of 22·8 and 24·5 respectively, as opposed to 21· and 26·9 per 1,000 in the preceding week ending 7th January, indicating an improvement in the registration of births with a retrogression in that of deaths.

2. That the undermentioned Municipalities returned the highest proportions of births and deaths:—

Births.	Ratio per mille.	*Deaths.*	Ratio per mille.
Narainganj	49·7	Beauleah	49·9
Mozufferpore	43·8	Suburbs of Calcutta	44·9
Jessore	42·8	Puri	42·0
Comillah	42·3	Narainganj	37·2
Durbhanga	39·3	Jessore	36·7
Monghyr	35·3	Gya	36·3
Beauleah	31·5	Serampur	33·4

3. That, as compared with the results of the preceding week, there was a fractional diminution of mortality from all the diseases, excepting small-pox and injury, the death-rates from which presented no variations:—

	Ratio per mille during the weeks ending— 14th Jan. 1888.	7th Jan. 1888.
Cholera	2·3	2·9
Small-pox	·03	·03
Fever	10·4	11·2
Bowel-complaints	4·2	4·4
Injury	·2	·2
Other causes	7·3	8·1

4. That while the following Municipalities exhibited conspicuously high mortality from cholera, fever, and the maladies classed as "Other causes," in the others no noticeable severity from small-pox, bowel-complaints or injuries occurred excepting in Puri, where 14·7 per 1,000 of the population died from bowel-complaints:—

Cholera.	Ratio per mille.	*Fever.*	Ratio per mille.	*Other causes.*	Ratio per mille.
Narainganj ...	12·4	Beauleah ...	34·2	Gya ...	19·8
Beauleah ...	10·5	Jessore ...	24·5	Puri ...	14·7
Durbhunga ...	5·5	Purneah ...	20·8	Serampur ...	13·7
Suburbs of Calcutta ...	4·9			Suburbs of Calcutta ...	13·0
Howrah ...	4·0				
Dacca ...	3·2				

5. That the death-rates in relation to *Sex*, *Class* and *Age* were returned at the rates indicated below:—

According to Sex.	Ratio per mille.	*According to Class.*	Ratio per mille.	*According to Age.*	Ratio per mille.
Males	26·0	Christians	17·4	Under 1 year ...	152·6
Females	22·8	Hindus	21·8	1 and under 5 years ...	28·4
Ratio of male deaths to every 100 female deaths ...	129	Mahomedans ...	24·3	5 ,, 10 ,, ..	12·7
				10 ,, 15 ,, ...	4·5
				15 ,, 20 ,, ...	12·5
				20 ,, 30 ,, ...	14·2
				30 ,, 40 ,, ...	18·7
				40 ,, 50 ,, ...	23·0
				50 ,, 60 ,, ...	31·7
				60 years and upwards ...	79·5

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*

The 6th February 1888. *Sanitary Commissioner for Bengal.*

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 14th January 1888

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorised form of age classification.

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 and 25 Vic., Cap. 67.

The Council met at the Council Chamber on Saturday, the 4th February, 1888, at 2-30 P.M.

Present:

The HON. SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding.*

The HON. G. C. PAUL, C.I.E., Advocate-General of Bengal.

The HON. H. J. REYNOLDS, C.S.I.

The HON. C. P. L. MACAULAY, C.I.E.

The HON. T. T. ALLEN.

The HON. SIR HENRY HARRISON, KT.

The HON. SIR ALFRED CROFT, K.C.I.E.

The HON. MOULVIE ABDUL JUBBAR.

The HON. G. IRVING.

The HON. BABU KALI NATH MITTER.

The HON. DR. MOHENDRALAL SIRCAR, C.I.E.

The HON. C. H. MOORE.

The HON. DR. GOOROO DAS BANERJEE.

CALCUTTA AND SUBURBAN MUNICIPALITIES AMALGAMATION BILL.

The Hon. Sir Henry Harrison moved that the clauses of Chapter II, Part I, of the Bill to consolidate and amend the law relating to the municipal affairs of the Town and Suburbs of Calcutta be further considered for settlement in the form recommended by the Select Committee.

The motion was put to the vote and carried.

His Honour the President said—On Saturday last we left off at the end of the speech of the Hon. Babu Kali Nath Mitter on the proposal that the number of the Commissioners be increased to 80. The first motion in to-day's list of business is that of the Hon. Dr. Mohendralal Sircar with reference to the boundaries. I have been in communication with the hon. gentleman, and he has informed me that he is willing to withdraw that motion. I am much obliged to him for having done so, as it will be inconvenient to discuss that question now, and he will have the opportunity at a future stage of the Bill to propose any alteration he desires in the boundaries. Besides the amendment now before the Council, there are other amendments on section 4 in the name of the Hon. Mr. Irving and the Hon. Moulvie Abdul Jubbar. I will call upon the Hon. Mr. Irving to move the amendment No. (2) which stands in his name.

The Hon. Mr. Irving said:—In moving the amendments on sections 4, 7, and 8 which stand in my name, I will briefly refer to them in their order.

The object of the amendment on section 4 is to reduce the number of Commissioners from 75 to 60. It is generally felt, I believe, that a Municipal Commission of 75 members is much too large to be effective and manageable, and that a smaller and more compact body would be better for all practical purposes. The Commissioner of this division, in his letter of the 2nd instant, remarks on sections 7 and 8: "I think the number of Commissioners may very well be reduced from 75 to 40. The object of a Municipal Corporation is work, *not* debate; and I think that 40 members will make a more practical working body than 75." In large towns in England a smaller number of representatives than that proposed for Calcutta is the rule. Liverpool has one to every 10,000, Manchester one to every 11,500, and Glasgow one to every 15,500 of the population; while in Bombay, taking the population at 800,000, they have one to every 11,111; whereas, taking the population of Calcutta at 582,000, 60 Commissioners would give one Commissioner for every 9,700 of the inhabitants. The proposed reduction in the number of Commissioners would tend in some measure to limit the long and fruitless discussions for which fault has been frequently, and I think justly, found with the present Commissioners, and would therefore economize time, accelerate business, and enable busy men to take a fair share in the government of the city.

Similarly, in moving that the words '60 and 20' in section 7 be substituted for '75 and 15,' I beg very briefly to state that the arguments and position as regards substituting '60 for 75' are the same as those urged in respect to section 4. The proposal to give the Government 20 instead of 15 appointments, or one-third as is now done, is one which commends itself to the European community generally, and inasmuch as it would enable Government to redress more effectually the inequalities of representation among the various classes, it is a very desirable provision.

Sir Henry Harrison, in his able note on the constitution of the future Metropolitan Corporation, is very decided in his view as to the necessity of retaining in the hands of Government the power of nominating one-third of the Commissioners, in order to enable it to adjust representation between the various classes. The additional special constituencies referred to in section 8 would only give the European and Eurasian communities that assurance of getting their own representatives returned to which they are fully entitled. The Mahomedan population is also seriously under-represented, and the Government nominations, if adequate, would do much to remove this cause of complaint. It is undoubtedly a great injustice, in a community like that of Calcutta, that any one race or class should practically rule all the others, and

neither the Europeans nor the Mahomedans are satisfied with the present arrangement.

Europeans in India should remember that superior numbers do not constitute a dominant race, and that mere weight of numbers ought not to entitle one class to override all others. This is strongly urged by the European community which I represent, feeling as they do that they are now shut out from their fair share in the control of City affairs. Instead, therefore, of increasing the number to be elected by the general community, and thus enlarging the power already held by the practically governing race, it is on every ground desirable that Government should have, as hitherto, the nomination of at least one-third of the Commissioners, and that in addition to the ten Commissioners to be elected by special constituencies. This arrangement would go far towards securing a fair balance of representation, and would give satisfaction to the most intelligent classes of the community.

Then in section 8, I propose that the word '30' be substituted for '50.' In placing this before the Council, I must refer to section 15, where it is proposed that there should be 25 wards in the enlarged town, in place of which I have proposed 15 wards, and my present proposal, if accepted, would give two Commissioners to each ward. As, however, the hon. member in charge of the Bill is, I understand, in favour of still fewer wards, if any change is to be made, I would readily accept any modification, say ten wards with three Commissioners to each. But that after all is a detail, and does not affect the main question of the number of elected Commissioners. I have already asked for a reduction in the total number of Commissioners, and this carries out further that idea. In Calcutta, where the natives, as pointed out by Sir Henry Harrison, are to the Europeans and Eurasians as 16 to 1, it is a certainty that the great majority of elected Commissioners will belong to the more numerous class. In the report of the amalgamation Committee at page 9, the following statement occurs: "Taking two important classes, the commercial class and the Mahomedan population, no one can fail to be struck with the very small proportion of the elected Commissioners which these return."

Without some such safeguards as are proposed, the European, Mahomedan, and other interests will be overborne to a degree which I think would be prejudicial to the interest of the whole city. Therefore, if 30 Commissioners are elected in the ordinary way, that will amply provide for the great Hindu section of the community, and will give them their fair proportion of members in the Corporation, and their proper and legitimate influence therein. More than this should not be granted, for any further concession would only be to the prejudice of the other important sections of the community.

The Hon. Sir Henry Harrison said:—I understand that we are now discussing the two questions of the number of the Commissioners, and what proportion of them should be elected by the several wards or local areas. The further question as to whether that proportion of members which is not to be elected by wards, which at present stands at one-third, should be divided as provided in the Bill into 15 members to the Government, and 10 to selected constituencies, or whether they should be appointed in any other way, is a question which will stand over for a subsequent amendment. That being the case, we find that the proposal we are now discussing of having 75 Commissioners, of whom two-thirds should be elected and one-third be nominated in some form or other, is the one which has attracted perhaps more attention than any other part of the Bill, judging by the representations which have been received on the subject by the Council; and seeing the very large measure of attention which this question has attracted—it being no exaggeration to say that it forms the subject of one-half of all the reports which have been received from various bodies—it can hardly be considered unreasonable if we devote considerable attention to this matter. It is looked upon as the cardinal hinge of the proposed Bill. This proposal has been made the subject of criticism in two directions. The British Indian Association, the Indian Association, and some other bodies, urgently press that at least three-fourths of the Commissioners ought to be elected. On the other hand, most of the European Associations press with equal urgency that the proportion of nominated Commissioners should be increased rather than decreased.

The Hon. Babu Kali Nath Mitter has been the exponent of one set of opinions; the Hon. Mr. Irving of the other. I shall devote my attention, first, to the Hon. Babu Kali Nath Mitter's amendment as regards the total number of Commissioners. The Hon. Mr. Irving was perfectly right in saying that in most places the number was not so large as 75; 64 was a very usual number. In France the normal number was 36, which was in some places enlarged owing to local circumstances. At the same time I attach very little importance to this point. I do not believe there will be any practical difficulty in working, whether the number of Commissioners be 75, or 60, or 80, because we know that the time taken up by discussion does not depend on the total number of Commissioners present, but upon those Commissioners who wish to speak: and in a Corporation of even 40 members, the leading Commissioners would, for the most part, be returned, and these would take an active part in the discussion as at present. I do not think that in this respect there would be any great difference in a body of 40 members, and a Corporation of 80 Commissioners, of whom 15 or 16 would, as a rule, take part in the discussions. Practically, therefore, I attach little importance to the number of the Corporation. We only revise the work of the Committees in general meetings of the whole body of Commissioners.

Next as regards the division of numbers between the different electoral bodies. On this point the main argument of my hon. friend seems to be this: that the elective system was introduced twelve years ago against the strong opposition of Sir Stuart Hogg, and against the opposition of a great portion of the European community, and yet it has proved a success; and if it has proved a success, why not extend that principle? Is it not fair after twelve years of success to extend it? But the argument is not stated in a way to entitle it to any logical value. Suppose for the sake of argument that the elective system has proved a success, regarding which opinions are undoubtedly divided, what follows would be this—that a Corporation composed of two-thirds elected Commissioners and one-third nominated Commissioners had done its work fairly well. From this the inference might just as logically be that we should increase the proportion of nominated Commissioners as that we should increase the proportion of elected Commissioners. The real argument derived from the admission of success is, leave well alone. But the hon. member no doubt means more than that. He means that the elective element in the constitution of the Corporation has proved successful, and that therefore the elective principle in it should be expanded. On this point my own belief is that most persons will form their judgment of success or failure according to the preconceived inclinations with which they regard it. Those who do not wish it well will think it has not been successful, and those who were predisposed in its favour will lead themselves to believe in its success. But I am hopeful that this difference of opinion will in a great measure disappear if we deal with the question in a specific way. I admit that from some points of view it should be considered a success. In the first place, by the elective system we have attracted to the Corporation a number of Commissioners who have taken the greatest possible interest in the work—Commissioners who have been most assiduous in their attendance at meetings, who have looked into matters with care and scrutiny such as is hardly found in any other department. They have set their face resolutely against all extravagance, they have thrown the light of discussion on every detail. In fact it has led to the administration of the municipality being carried on much more in the light of day than it would have been as far as other members are concerned. On questions of contracts and expenditure in detail they have paid an attention to the work which was hardly paid before. In the next place the system has had the advantage of bringing in a number of men who owe their position entirely to something outside Government, not to nomination. They feel that they depend for their position on those who have returned them, and who naturally look to them to represent their views, and therefore they bring with them the light of real public opinion of a certain class—a comparatively small class in numbers, but a very influential class indeed, and it has been a great advantage that we should have the opinion of a class of this kind pressed upon us, so that we know what they want and what they object to. Thirdly, we have persons who represent local areas. This has led to many good results. Pre-

viously the Town was looked upon very much as a whole, and the wants of the Town as a whole were considered. Now the desire for large improvements has decreased, and the Commissioners are more interested in local wants. This has to some extent worked well, and the large increase in the value of property is in no small degree due to the way in which local improvements have been attended to. Fourthly, the elective system has been successful in this, that people know that they have a Commissioner who represents them, and when they have a complaint, if it is not immediately attended to by the Executive, they appeal to get the assistance of their Commissioner. This has some beneficial results; it causes some degree of self-reliance in the people when they know that they have some one to whom they can go if they do not get immediate redress. The last and most important result is this. The elected Commissioners, who had taken so much interest in the affairs of the Municipality, have themselves improved much by experience in the work. I have seen very great improvement in the tone and method and manner of doing work by the Commissioners who have become familiarised with their labours. In this review I think that I have given a very fair account of the work of the elective Commissioners, but after all said is not the *rôle* which I have described precisely the *rôle* of opposition? We all know that administrative affairs suffer if there is no effective check; and whether we look at the official world as it exists in India, or at the Government as it is in England, worked by party, it is a well-recognised fact that, if there is no adequate check, there is danger either of the work going on too fast, or there is danger of its not being as economical as it might be. The *rôle* which the elective Commissioners for the native wards have at once assumed is precisely that of checking, watching and controlling in every way, in seeing either that no expenditure is incurred without sufficient reason, or that projects of improvement are not undertaken which cannot be fully justified. They have in fact been the brake-power in the municipal train. But a train cannot progress by brake-power alone, nor can a city thrive by opposition alone. It is also necessary that you should have motive power, and this is precisely the one point in which the Corporation has been deficient. The motive power has been too weak, while the opposition power has been very strong. Were time of no importance I could prove this contention conclusively, but I hope the Council will accept my experience as a matter of testimony rather than desiderate proof. In a body like the Corporation, the Executive alone is in a position to push on the work. The Chairman therefore requires that the extremely powerful criticism and opposition which is brought to bear to his proposals should be met by an equally powerful backing up, where a sufficiently good explanation can be given of what is required to be done. Over and over again this has been wanting—the Executive Government of the Town is working with a minority, and everybody knows what a compromising position that would be. I might go through the budget year by year and show that the Chairman has to make out a very powerful case before he can get sanction for expenditure: and he is thus much handicapped in his proposals for improvement. I cannot put the case more succinctly according to my own view than to say that the motive power in the Corporation has been too weak. That being so, the question is how has it been possible to work the machine. The way in which it has been possible is mainly by the Chairman first of all using his powers of persuasion and trying to induce Committees to do what he considers necessary, a course which I must in justice say very often succeeds, or appealing to a general meeting. In general meetings of the Corporation he no doubt on the whole succeeds in carrying his point more easily than in Committees, and the reason is because in general meetings there are a larger number of Commissioners disposed to support him who do not take any part in the ordinary Committee work of the Municipality. The position of the Chairman is always stronger in general meetings than in Committees of the Corporation. The difficulties which I have described were much more insuperable in the earlier days of the Corporation. When I first joined as Chairman, I found the difficulty of doing more than just carrying on the work of the Municipality greater than it is now; and all who take an interest in municipal affairs will bear me out that there has been a conspicuous and signal improvement latterly as compared with the earlier period. To this many reasons have contributed. In the first place, the Commissioners have

improved by experience; *secondly*, the proportion of Commissioners of the nationalities which were at first weakly represented has increased. The hon. member laid before the Council the figures of four elections. He showed that whereas in 1876 the Hindus elected 41 out of 48 elective Commissioners, in 1885 they were able to return only 27 out of 48. I could not define the object with which the hon. member cited these figures. I do not know whether he regarded it as a misfortune or a good fortune to the Corporation. He showed that the checks on the majority had been acting better, but had this resulted in benefit or the reverse; if in benefit why did he wish to diminish these checks? In 1875 three checks were designedly chosen—*first*, there was the check of the one-third of nominated Commissioners; *secondly*, the check that in the European wards a larger measure of representation was conceded than in the native wards, especially in the wards in the north of the Town. Though the European wards were smaller in population than the native wards, they were given proportionally a larger number of representatives; *thirdly*, there was the check in all the wards of the cumulative vote which were allowed three members. It has been correctly stated that in 1882, and again in 1885, the Europeans and Mahomedans became aware of the power which they possessed under these two last-named checks, and the consequence was that 1,105 European voters returned 13 Commissioners, 1,054 Mahomedans returned 8 Mahomedans; whilst 7,827 Hindus returned only 27 members. So far, well and good. The question is, has that been advantageous or not? I say that undoubtedly it has been a great advantage, and that it was one of the factors which operated to the carrying out of more work during the last few years. Does not that prove that if the Corporation is to work well, you must not have an opposition which is too overwhelming? I welcome cordially an effective opposition, but I equally contend that, if the opposition consists of more than half of the members, then the difficulty of working is greater than it should be. It is on that ground I submit that what has really been proved is exactly the opposite of what should have been proved for the hon. member's contention. The elective system has been a success as far as that it has organized an effective opposition and check to extravagance. It has failed in so far as that opposition has been numerically too strong. At first its numbers were so large that it brought every thing to a dead lock. As it has decreased, things have progressed more fairly. Consequently, I am perfectly justified in saying that it is only owing to the fact of the one-third nominated Commissioners having furnished some counterpoise to the preponderance of the opposition that the success of the Corporation has been secured, and it is hardly too much to say that this has been the hinge on which the success of the Corporation has turned. If so, what could be more erroneous than to propose that this most important factor should be weakened—that that which required strengthening should be weakened, and that which was already too strong, should be further strengthened. On these grounds I am constrained to say that it would be very unfortunate if the Council came to the conclusion that any larger proportion of the members of the Corporation should be elected by local areas.

Passing now to the opposite point of view, it is more difficult to maintain my ground. I do think there is a great deal of force in what the Hon. Mr. Irving has urged, and I believe a part of the greater success of the Bombay Corporation has been due to the greater proportion of the nominated Commissioners. In Bombay the Corporation started with only 64 members, of which one-half only were elected by local areas. When the number was increased in the present Bill from 64 to 72, still, as before, only one-half were to be elected by wards, 16 were to be nominated by the Government directly, and 20 by constituencies which, with the exception of the Chamber of Commerce, were under the control of the Government; probably in Calcutta also, had we 12 years ago proceeded a little more slowly, we should have made more decided and continuous progress, and parties would have been better balanced. But it is a very different thing when you have a *tabula rasa*, and when you have a foundation already laid. In the work of legislation, gradual construction on existing foundation is the safest. We have existing lines to work upon, and unless we are prepared to say that the Corporation will not work on these lines, it is undesirable to change them. I am not prepared to say that the proposed constitution is

unworkable. *Firstly*, I think that there are two or three details in this Bill which will a little strengthen the party of progress if adopted, such as not allowing Ward No. 12 to lose its second member, and the plural system of voting. And then as regards the power of nomination, this gives a power which the Government has never used to the fullest extent. It has never so used the power of nomination exclusively to strengthen the motive power in the Corporation, and this ought to be tried before the fundamental proportions are changed. Even using the power of nomination as hitherto exercised, I am bound to say that if all the members nominated would attend the general meetings, there would be sufficient motive power to enable the Corporation to get along. Again, if I had any hope that the European members would take the same interest as the native members, I should be more disposed to yield to the Hon. Mr. Irving's argument, but I am afraid we must put this aside as really out of the question. I believe that to some extent they have been kept away from the meetings by finding that they are in the minority, but at the same time they have also found that it was quite impossible for them to give the same attention to the work of the municipality as those who have ample leisure, and to whom it is almost a pleasure. There are a certain number of leisured gentlemen amongst the Native Commissioners who have often come two, three or four times a week to Committee meetings to do work which is certainly not of transcendental interest, but the ordinary humdrum work of the municipality. Now is it possible to hope that we can get European gentlemen, who have their business to attend to, and to whom time is money, to attend and take part in work of this nature? If we cannot hope for that, we must fall back upon the present lines. The Chairman must as heretofore do the work with six or eight Commissioners willing to meet him two or three times a week, and carry on business with pain on a system of reasonable compromise. The Chairman has at times to give way, and the Commissioners at times give way, and provided there is an appeal to the general meeting, with fair prospects of success, the Chairman may expect to get sufficient concessions made to enable him to carry on the work of the Corporation at marching speed if not an express speed. It is my belief that, even if we were to go so far as to have a majority of Europeans in the Corporation, we should still find that in Committee meetings the majority would be Native Commissioners. For these reasons, although there is great force in the arguments used by the Hon. Mr. Irving, I think we ought to follow the old lines as laid down in the Bill, which allow two-thirds of the Commissioners to be elected by the wards; and I therefore trust the Council will, on the fullest consideration, adhere to the proposals before them in the Bill.

The HON. MR. MACAULAY said:—Though I cannot hope to contribute anything of value to the discussion at this stage, I consider that as a member of the Select Committee, which has framed the section in the form in which it has been presented to the Council, I should not give a silent vote when the vital question of the constitution of the municipality is being settled. And for myself I am glad to have the opportunity of explaining the apparent incongruity of voting against the amendment of my hon. friend Babu Kali Nath Mitter, which involves an extension of the principle of election, while I am myself primarily responsible for the clause of the section which will give that principle a still larger extension. Briefly, I oppose the amendment of the Hon. Babu Kali Nath Mitter, on the ground that, although it involves the expansion of the principle of election, it involves not the expansion, but the contraction, of what is much more important—the principle of representation; I oppose the amendment of the Hon. Mr. Irving on the ground that it involves the contraction of both: and I will afterwards support my own proposal on the ground that it involves the expansion of both. I venture to think that the different members have the same end in view. Their object is a common one. It is the search for a scheme under which all interests in the Town will be represented in proportion to their importance. If this object can be attained, without any violent disturbance of principle on other points, by a system which will provide for election only, and will exclude nomination, I will gladly support it. But this being impracticable, the question is, will three-fourths elected by the general body of the rate-payers, as proposed by the

Hon. Babu Kali Nath Mitter, or one-half as proposed by the Hon. Mr. Irving, be likely to attain the object in view? To take first the proposal of my friend, the Hon. Babu Kali Nath Mitter. I have read with great care the minute of dissent which my hon. friend has appended to the first report of the Select Committee, and I have listened attentively to the very able speech in which he has laid his amendment before the Council. But I cannot agree that the arguments of those who hold that the proportions proposed by my hon. friend will not secure the adequate representation of minorities has been answered. I do not think that my hon. friend Sir Henry Harrison has properly understood the object of the hon. mover of the first amendment in quoting the figures which he has submitted to the Council. I understand his object to be, not to show that the increase in the number of European Commissioners is a matter of good fortune or of evil fortune to the municipality, but to show that the strongest class do not wish to keep all representation to itself to the exclusion of other classes. But, however this may be, it is an undoubted fact that the elected portion of the Commissioners do not represent fairly all sections. It is useless to point to the gradual increase in the number of Europeans in the Corporation. The fact remains that the representation of the Hindu population, and of what I may call the non-commercial classes, largely preponderates, and I think that this preponderance should not be increased. To guard against misunderstanding, I wish to state my distinct opinion that the working of the elective system in Calcutta has been a decided success. I cannot agree with my hon. friend Sir Henry Harrison in thinking that, if we were beginning to legislate for an elective system, we might take the Hon. Mr. Irving's proposal for electing only one-half. I think that, looking to the experience we have had of the working of the system as a whole, we should be fully justified, were we in the position of our predecessors, the legislators of 1876, in taking the proportion of two-thirds elected by the rate-payers. For this reason I will certainly oppose my friend the Hon. Mr. Irving's amendment. The elective system has brought forward men like my friend the Hon. Babu Kali Nath Mitter, men of ability and business habits, who have done excellent service to the community, and I think that all friends of Self-Government must rejoice that these men owe their positions, not to the voice of nomination, but to the suffrages of their fellow townsmen. But I submit that that is no reason for putting aside the other considerations to which I have adverted. That one part of the constitution has succeeded is no reason for stimulating it further at the expense of the rest. It is because I think that the first amendment will weaken what I consider the all-important principle of representation that I ask the Council to reject it.

The Hon. Dr. Gooroo Das Banerjee said:—With the most earnest desire to make concessions to the European community to secure their co-operation in the municipal affairs of the town, I cannot support the amendment of the Hon. Mr. Irving. It has been urged that the fact of the number of Commissioners being large, causes a long time to be consumed in discussions in the Municipal Board, and that this prevents able commercial men from taking part in the administration of the affairs of the municipality. But it should be borne in mind that the duties of the Municipal Commissioners are not merely of a deliberative character sitting at meetings of the Board, but their duties should also be of an inspectional nature. A Municipal Commissioner should inspect the ward he represents, so that he may be able to ascertain its wants and requirements, and for the due discharge of duties of this class the number of Commissioners necessary to represent a ward efficiently must be a matter of consideration; and seeing that the dimensions of these wards are by no means small, I submit that one Commissioner for each ward will hardly be adequate representation. I see no force in vague, undefined speculative reasons, but I think it a most practical reason that it would not give the Commissioner sufficient time to inspect his ward efficiently. Therefore, though on the whole a larger number of Commissioners might entail greater sacrifice in time, on the other hand we have, to compensate for it, greater efficiency secured in one respect; and if the members of the European community are pleased to bear this in mind, I hope they will not grudge any additional sacrifice of time that the

number of Commissioners proposed in the Bill might entail. I may also add that if the charge on the score of loss of time is well-founded, the members of the European community taking part in the administration of the municipality may by the moral force of their opinion and example help in removing that ground of objection. For these reasons I submit that the number of the Commissioners ought not to be diminished to 60. Then, as regards the proportion of nominated Commissioners, whilst fully sharing the sentiments uttered by my hon. friend, the mover of the first amendment, that so far as is consistent with other interests, the elective principle should be expanded. As I am opposed to the representative principle embodied in section 8 of the Bill, which gives the right of representation to voluntary Associations like the Chamber of Commerce and the Trades' Association, I do not think it will be fair to reduce the number of nominated Commissioners. I would leave it where it is, but oppose the right of election by voluntary Associations.

The Hon. Mr. Moore said:—I rise to support the amendment moved by the Hon. Mr. Irving. I have so recently come into direct contact with Municipal affairs that I candidly confess I have no fixed principles on the subject of municipal representation, and I can therefore only be guided by the safe and simple rules of common sense which plainly point to the advantages to be derived from reducing numbers to the smallest quantity consistent with fair representation of the interests involved. I have heard no arguments to show that the reduction of the number of Commissioners to 60 would produce inadequate representation, and the strongest argument in favour of the changes proposed in the amendment seems to me to be the statement made by the hon. member in charge of the Bill that, owing to the opposition being in a majority, the motive power in the Municipality is wanting, which seems to prove that the decrease of the one class and the increase of the other, as suggested by the Hon. Mr. Irving, would be in the best interests of the Municipality.

The Hon. Dr. Mohendralal Sircar said:—I do not understand how the motive power can be overbalanced by an effective majority. The motive power is furnished by combining the functions of the Corporation, and it is the carrying out of those functions which is entrusted to the Executive. The elective members should certainly watch how the functions of the Corporation are carried on. There we have the motive power and not in the action of the Executive. So I cannot understand how the motive power can be wanting if the elective element is strengthened. Then as to loss of time to the Commissioners, I think that economy of time is not always economy of work. Then again as to the success of the elective system that has been advanced as an argument by my hon. friend, the mover of the first amendment, I do not see how that argument has been rebutted by the hon. member in charge of the Bill. If it has been shown, and I think conclusively shown, that the elective system has proved a success, I do not see any reason why we should not have further extension. The life of the elective system depends upon a larger proportion of elected members, and if the system has already proved a success, why should not the proportion of elected members be increased? With these observations I will support the amendment of the Hon. Babu Kali Nath Mitter.

The Hon. Babu Kali Nath Mitter said:—I shall try to be as brief as possible in my reply. In the first place it is a matter of regret to me that my hon. friend, the mover of the Bill, did not understand how I wanted to make out that because the present system has proved a success, therefore it is necessary that there should be a further extension of the elective principle. I think the answer is as clear as it can be. Previous to 1876 the system then in vogue was nomination. The Government thought fit to introduce the elective system, and if that has worked well, I think it is a strong argument that there should be further extension of that system after the experience of twelve years. In English towns it is one of election throughout; there is no nomination whatever, and that is not to be forgotten in dealing with this question. When the present system of election was introduced, it was thought proper to retain in the hands of Government powers which are inconsistent with English precedent. Then nobody grudged such retention of power. But now, as the system has worked well—and on behalf of myself and my colleagues of the elective

portion of the Corporation, I sincerely thank the Hon. Mr. Macaulay for the admission that, so far as his individual opinion is concerned, he considers that the elective system has proved a success—I think that a system analogous to the system which prevails in England should, as far as practicable, be established. Then again the hon. member in charge of the Bill did not understand why I put forward the results of the last two elections. How he could have misunderstood my intention, it is impossible for me to say. It is as clear as anything can be. The point I wanted to establish is this, that the greater the interest taken by the several nationalities, the greater the number of Commissioners returned by them; that in the first election, as the Hindus took the most prominent interest, they were able to return the largest number of representatives. Then at the subsequent elections, as other constituencies took larger interest, they were able to return a larger number of members, and consequently the Hindus suffered, and the use which I wish to make of these facts is, that we should leave the returns to be regulated by the result of the elections. If all the constituencies in the Municipality took the interest in the elections which they ought to take, they should be able to return a due proportion of members, and then particular interests would not suffer. If the elected members of the Corporation had done all that the hon. member in charge of the Bill was pleased to say of them, I think it is only right and fair that their number should be further increased. They should not be told, you have done all this, still there is mistrust that if your number predominates, you will not do all that you have done. I do not think that is a right principle at all. It is pretty well known that the Hindus pay the largest rates in the town. I had a statement prepared of 100 of the largest rate-payers, barring the Government, and from that statement it appears that 55 out of the 100 are Hindus, and therefore it is only right that their number should predominate in the Corporation. But from the figures I gave on the last occasion, the Council will see that at the last elections the number of Hindu Commissioners was exactly the number which the Select Committee which considered the Bill of 1875 proposed, *viz.* 27, and it cannot therefore be said now that there is a preponderance of the Hindu element in the Corporation.

Now, with reference to what has fallen from my hon. friend Mr. Irving, it seems to me that he has not in any way controverted my argument. He has not pointed out how 60 Commissioners would be sufficient to represent the different wards of the town, or how it would be adequate representation. He has fixed the number at 60, and said that there should be one Commissioner for each ward, or if there were only 10 wards, that there should be three Commissioners for each ward. But would it not be better to have only two wards, one constituting the whole of the northern portion of the town, and the other the southern portion, and have only three Hindus, three Mahomedans and three Europeans? That also would not be adequate representation, and therefore I submit that it would be a retrograde measure either to reduce the number of the wards or the number of Commissioners as proposed by my hon. friend. I myself attach great importance to the number of the Commissioners being increased to 80. As seven additional wards are to be added to the town, it would, in my opinion, be a mistake simply to add three to the present number of the Commissioners.

The Hon. Babu Kali Nath Mitter's motion, that in lines 3 and 10 respectively of section 4, the word 'eighty' be substituted for 'seventy-five,' being put, the Council divided:—

Ayes 4.	*Noes* 9.
The Hon. Dr Mohendralal Sircar.	The Hon. Dr. Gooroo Das Banerjee.
The Hon. Babu Kali Nath Mitter.	The Hon. C. H. Moore.
The Hon. H. J. Reynolds.	The Hon. G. Irving.
The Hon. the Advocate-General.	The Hon. Moulvie Abdul Jubbar.
	The Hon. Sir Alfred Croft.
	The Hon. Sir Henry Harrison.
	The Hon. T. T. Allen.
	The Hon. C. P. L. Macaulay.
	His Honour the President.

So the motion was negatived.

The HON. BABU KALI NATH MITTER's motions:—

- That in line 1 of section 7 the word 'eighty' be substituted for 'seventy,' and that the word 'twenty' be substituted for 'fifteen.'

That in line 1 of section 8 the words 'of' and 'fifty,' respectively, be omitted; and that the word 'sixty' be inserted after the word 'remaining,'

were put to the vote and negatived.

The HON. MR. IRVING's motions that:—

That in lines 3 and 10, respectively, of section 4, for the word "seventy-five" the word "sixty" be substituted.

That in line 1 of section 7, for the word "seventy-five" the word "sixty" be substituted, and that the word "twenty" be substituted for "fifteen."

That in line 1 of section 8, for the word "fifty" the word "thirty" be substituted,

being put, the Council divided:—

Ayes 3.	*Noes* 10.
The Hon. C. H. Moore.	The Hon. Dr. Gooroo Das Banerjee.
The Hon. G. Irving.	The Hon. Dr. Mohendralal Sircar.
The Hon. T. T. Allen.	The Hon. Babu Kali Nath Mitter.
	The Hon. Moulvie Abdul Jubbar.
	The Hon. Sir Alfred Croft.
	The Hon. Sir Henry Harrison.
	The Hon. C. P. L. Macaulay.
	The Hon. H. J. Reynolds.
	The Hon. the Advocate-General.
	His Honour the President.

So the motion was negatived.

The HON. MOULVIE ABDUL JUBBAR moved that in line 1 of section 7, for the word "fifteen" the word "twenty-five" be substituted. Also that the last paragraph of section 8, beginning with the words "and ten shall be elected" till the end of the section, be omitted. He said:—In bringing forward the motion which stands in my name, I would, with Your Honour's permission, take up together the two amendments which I propose. They are so closely connected that I think they need not be dealt with separately. Sections 7 and 8 of the Bill now before the Council have in view a change in the constitution of the Municipal Corporation of the Town of Calcutta. At present two-thirds of the members of that corporate body are elected by the rate-payers and one-third appointed by the Government; but the Bill proposes to limit the power of nomination by Government to one-fifth of the number of Commissioners. The existing system, as it is, is by no means favourable to the interests of the Mahomedan residents of this City and the Suburbs, and the change which is now intended to be introduced will make them the greatest sufferers. The Mahomedans constitute 28 per cent. of the population of Calcutta and 38 per cent. of that of the Suburbs, but in Calcutta we have only 12 Mahomedan Commissioners and in the Suburbs 2. These figures, as they stand, do not at all show a fair proportion; and if Government had not exercised its power of nomination in favour of the Mahomedans, the number of Mahomedan Commissioners would have dwindled to almost nothing. It may plausibly be said that as the Mahomedans do not come forward and exert themselves for election, they are themselves to blame for this state of things; but, Sir, no man with a sense of self-respect would offer himself as a candidate when he has very little chance of success. The Mahomedans are the most conservative people under the sun, and often demur to receive innovations of any kind. Their confidence in Government is unshaken. They continue to believe that all public interests are safe in the hands of the Government, and they have not, as far as I know, ever asked for the privilege of managing public affairs. Government has introduced representative municipality in this country, and it behoves Government to see that the interests of the different nationalities are adequately represented on the Municipal Boards. India is neither England nor France, where the Government has to legislate for, and to attend to the interests of, one and the same nation. The Indian Empire comprehends many nationalities, notably the Hindus and the Mahomedans, and the Government cannot rightly allow an undue preponderance of one race over the other in representative institutions. Representative municipality is an exotic plant in India, and it can only flourish under the fostering care of Government. Representative

municipality will not be a blessing to all unless all interests are adequately represented, and, under the circumstances of the country, Government ought to reserve in its hands ample means of removing inequalities. The masses of the people have no idea of representative institutions, and for anything that may go wrong in the management of the affairs of the Municipality, they will speak in dispraise of Government. So for the sake of its good name, if not for anything else, Government should continue to select a considerable proportion of the Commissioners. The framers of the Act of 1876 fixed the proportions of elected and nominated Commissioners after careful deliberation, and I see no cogent reasons for upsetting their decision.

Now, Sir, while on behalf of the Mahomedans I am anxious that the proportion of nominated members should not be reduced, neither I nor they mean that such influential bodies as the Bengal Chamber of Commerce and the Calcutta Trades' Association should not obtain an adequate representation in the Calcutta Municipality. Calcutta owes its position among the great cities of the world to the capital and industry of its European community, and I shall not be so indifferent to its future welfare as not to desire the appointment of the members of that community to its Municipal Board, but what I object to is the policy of granting to self-constituted Associations the statutory right of election in municipalities. If such a policy is once adopted by the Legislature, it would give rise to numberless claims which Government would find it difficult to disallow. In these days when we are deluged with Associations, Unions and Societies bearing high-sounding names, it might be imagined to what end the policy embodied in the Bill would lead. I am afraid the result will be that, while Associations will monopolise the municipal franchise, the majority of the poor tax-payers will go unrepresented. Some of the hon. members of this Council might remember that when the Port Trust Amendment Bill was before it, an Association by the name of the Bengal National Chamber of Commerce came into existence and claimed the same right of election as had been granted to the Bengal Chamber of Commerce. It is not, Sir, that my co-religionists, whom I have the honour to represent in this Council, apprehend any harm to them from the influence of the European element in the Corporation, but they oppose on principle the recognition by law of voluntary Societies, the number of which is subject to fluctuation. There could be no just or reasonable ground for complaint, should Government appoint as many European gentlemen as would secure a proper balance of power in the Corporation, but I am sure many Associations would grumble should some of them be singled out for the concession which the Bill contemplates to make. I will now conclude by reading a passage in the letter addressed by the oldest Mahomedan Association in Calcutta, the Mahomedan Literary Society, and a short paragraph from the letter from the younger Association, the National Mahomedan Association. The senior of them, the Mahomedan Literary Society, said:—"The Committee are of opinion that the number of Commissioners to be appointed by Government under section 7, namely 15, is inadequate. Under the Act of 1876, Government has the power of appointing 24 Commissioners, and it is well known that this power has been exercised from time to time most judiciously by appointing members of the different communities in order to ensure a proper representation of their interests in the Corporation. The desirability of enabling members of the Mahomedan community to take part in the municipal affairs of the town has always been recognized. Whenever the Mahomedan element has been found to be insufficient on the Corporation, the balance has been in some measure restored by the appointment of Mahomedan Commissioners by Government. The practical effect of now reducing the number from 24 to 15, the Committee apprehend, would be to fetter the hands of Government in respect to the appointment of an adequate number of Mahomedans. The Committee therefore beg to suggest the substitution of the word 'twenty-five' for the word 'fifteen' in section 7." The younger Association, the Central National Mahomedan Association, said:—"The Committee also thinks it will be expedient to reserve a larger number of nominations in the hands of the Local Government."

The HON. DR. GOOROO DAS BANERJEE said:—I will support the amendment which has just been moved on very nearly the same grounds on which

the hon. mover of the amendment has based it, and for one or two additional reasons. I will first take up the latter of the two amendments, namely, that the last paragraph of section 8 be omitted. That clause provides that ten Commissioners shall be elected in accordance with rules to be framed by the Lieutenant-Governor—four by the Chamber of Commerce, four by the Trades' Association, and two by the Port Commissioners. This I consider to be objectionable as well as unnecessary. It is objectionable in the first place, because it recognises by Statute voluntary Associations regarding the constitution of which there is no certain stability. Any one of these Associations may represent to-day the entire community which it professes to represent, but next year it may cease to represent that same class adequately. Secondly, it is objectionable because the recognition of three out of a large number of similar Associations would make an invidious distinction which may give rise to discontent. Thirdly, these Associations, which after all are Associations of individual members, have the right of voting through the individual members of which they consist. Therefore already the commercial interests are represented through the votes which these individual members have. And if in addition we give the right of representation to these very individuals taken collectively, we will be giving the right twice over to the same individuals. And then I submit that, that with the former of the two amendments this provision of section 8 is wholly unnecessary. After all it appears that the total number of nominated Commissioners and the representatives of certain bodies comprises one-third of the whole number, that is 25, and I fail to see what difference it will make whether the whole of that number, 25, is left to be nominated by the Government; or whether 10 of them are elected by certain specifically named bodies, and the remaining 15 only by the Government. No objection has hitherto been raised as to the exercise of discretion by the Government as far as the commercial interest is concerned. As long as no such objection is raised, I submit it will be better far to let the whole number be nominated by the Government than to reduce the number to be appointed by Government to 15, and to leave these particular Associations to elect 10. It is quite possible that in the general elections the commercial interest may be adequately represented. In that case it will certainly be unfair that the commercial classes should have the still further privilege of electing the 10 members mentioned in the last paragraph of section 8 to the prejudice of other minorities which have an equally fair claim to representation. It would be better, in order to meet all possible contingencies, to leave the nomination of the whole number to the Government, so that the Government might be in a position to supplement the representation of the commercial interest if necessary, or to give a large proportion of the 25 nominations to other minorities, such as the Mahomedan community as occasion might require. I submit that no class of interests will suffer by allowing the whole number, 25, to be nominated by Government, whereas there is every probability of other interests suffering if the Government nominations are reduced to 15, and these voluntary Associations are allowed the right of electing 10 representatives.

The Hon. Sir Alfred Croft said:—I had very much graver doubts, when I entered the Council to-day, as to the wisdom and the desirability of introducing this clause empowering certain Associations to elect members of their own body,—much graver doubts than I have now, since I have had the advantage of hearing the speech of my hon. friend, the Chairman of the Corporation, and the reasons which he has advanced as to the necessity of strengthening the party of progress in the Municipality. The result of giving to the Chamber of Commerce, the Trades' Association, and the Port Commissioners the right of electing 10 members will, I am convinced, be to strengthen that party which Sir Henry Harrison says so much stands in need of strengthening. The possible consequences to the Mahomedan community of reducing the number of nominations that remain in the hands of the Government have been dwelt upon in a very serious way by my hon. friend, Moulvie Abdul Jubbar. Still I understand that in distributing its nominations, whether they be 15 or whether they be 25, the Government habitually exercises its power with reference to the comparative strength of parties as determined by the result of the preceding elections, and with the object of redressing any inequalities

that may have arisen. If therefore the European element in the Municipality has been strengthened by the addition of 10 members elected by those bodies, the Government would be justified in appointing additional members from any other section of the community which, in consequence of that fact, might stand in need of strengthening. But there is another point to consider. I am not inclined to attach any great importance to the distinction of Europeans as such, or of Mahomedans and Hindus as such. Distinctions of this kind do not seem to me to be relevant to the constitution of the Municipality. We have been told that there are two elements in the Municipality,—the party of progress, constituting a motive power, and the conservative party or party of criticism; and that on the just balance of these two parties the success and strength of the Municipality depend. It is probably by considerations of this kind that the Government would be guided in making its appointments; and if so, the question of Mahomedan, or Hindu, or European would not arise at all in that form. Another difficulty has been raised on the ground that these bodies are self-constituted Associations. It has been stated that the giving of the right of election to these Associations will create difficulties hereafter, in dealing with the claims of other Associations of a similar character. But there is one consideration which will bring these difficulties within very narrow limits, namely, that of the qualifications on which the right should be based. It seems to me that the only qualifications that can be recognised are the owning or occupation of property, or the paying of taxes, or the having in some other way a close pecuniary interest in the good government of the town, in the application of the Municipal Fund to the best purposes, and in the promotion of trade and commerce. If you put it in that way you at once get rid of a large number of Associations which are not connected with the objects I have named, as for instance literary Associations generally. It is true that the three Associations named in the Bill have no statutory character; but as a matter of common notoriety they have so defined and permanent a character that we can well recognise their existence. And with regard to the other contention that the votes will be given twice over, because the members of the Chamber of Commerce and of the Trades' Association have the right to vote in their individual capacities and collectively in the Associations of which they are members, I consider that the two qualifications differ materially. As occupiers of houses and as payers of taxes they have a right to their individual votes; as a body associated for a very definite object, namely, the promotion of trade or commerce, they are entitled to representation on very different grounds. It seems to me, therefore, that the contention against double voting falls to the ground.

The Hon. Sir Henry Harrison said:—Although this is not a question to which I attach very great importance or look upon as vital to the Bill, still as I am disposed to concur with the amendment, the Council will probably like to hear my reasons. I assume that, though in charge of the Bill, I am at liberty, if I think any proposal in it mistaken, in supporting an amendment which proposes to alter it. Whether my reasons are sufficient or not, I must leave the Council to judge. I think it but fair to recognise the fact that the system of nomination by Government is the system in possession. All the arguments for not disturbing the proportion of two-thirds, or for building so much on the present foundation, apply here to leaving the nomination as heretofore in the hands of Government. Secondly, it is an advantage to leave the hands of Government free. The object of leaving to the Government the nomination of one-third of the Commissioners is admitted on all sides to be mainly to secure better representation, that the Government may reduce inequalities as far as they are produced by the elections. In this case the Government would have greater power of doing so if all the nominations were left in their hands than if 10 nominations were taken away. On the other hand, I most distinctly say that if the representatives of these bodies can be induced to work, they are just the persons we want. As far as the Port Commissioners are concerned, they are entitled to have their own representatives on the Corporation if only by reason of the large amount of rates they pay. As far as the Chamber of Commerce is concerned, the endeavour has hitherto been to try to induce the leading members of that body to sit on the Corporation, but unfortunately

nearly always the endeavour has been unsuccessful. As far as the members of the Trades' Association are concerned, there is greater willingness to work, I suppose because the affairs of the town more intimately concern them; whereas the Chamber of Commerce feel their interest greater in the work of the Port Commissioners. We have had many members of the Trades' Association who were willing to take as much part in municipal affairs as is necessary for the well-being of the Corporation: some of them indeed have done very good service. Of members of the Chamber of Commerce we have hitherto had few, for the reason that gentlemen engaged in business cannot afford the time. We have only had one member of the mercantile community who has really been able to be on the Municipal Corporation and to work successfully, and that was Mr. George Yule, and probably he was one of the best members we have ever had on the Corporation. If other members of the Chamber will pay the same amount of attention to the affairs of the Municipality as Mr. Yule did, it would be an enormous advantage to the Corporation. The Port Commissioners would probably elect commercial members of their body to represent them on the Corporation, and the Chamber would naturally feel bound to do the same. But there is considerable fear that two or three valuable votes might be lost, because if it turns out that out of the whole body not more than one or two can afford the time necessary to sit out meetings and give their votes on critical occasions, then the other seats will be wasted, or we should practically have the 25 nominated Commissioners reduced to 20. This is one practical difficulty which will in all probability arise. It has often happened that some one who seems likely to make a good Commissioner if he could only give the time necessary, is at first willing to do so, but when the time comes he finds that he has something more important to do. I have in my mind two or three instances of gentlemen who would have made most valuable members if they would only have attended, but experience proved that they would not. For that reason I would prefer that the Government should have the whole of the nominations, and I am quite certain that if only 4 or 6 gentlemen connected with the Chamber of Commerce could be induced to come forward, there would be no doubt of their being welcomed.

I am also bound to say that considerable weight is due to the argument that voluntary Associations do not always so fully represent the interests they are designed to represent. As far as the Trades' Association is concerned, we know that they have always represented the trading interest, but we know perfectly well that in the case of the Chamber of Commerce it has not always been so. Up to about two years ago four or five of the leading firms in commerce would not become members of the Chamber, and therefore they would not have been chosen to represent that body. And it is perfectly within the sphere of possibility that a time may come when the body, which is the lineal descendant of the present Chamber, may represent only a portion of the large and influential firms of the town; and if that should be so, you would put the elections into their hands and take it away from the others. For these reasons, I would prefer to see all the nominations left to the Government.

Then I come to what is by far the most important and the strongest argument of all, that though this system of special constituencies has a great deal to be said for it, if it is introduced it ought to be introduced on the grounds of the strictest equity to all; and I am constrained to say that so far as it appears to me this has not been done. I concur with Sir Alfred Croft that it is of no importance whether we have Mahomedans on the Corporation or not. They form a kind of middle party. In some respects Mahomedans naturally agree with Europeans, and in some respects they side with the Hindus. They are appealed to on both sides, as they are open to conviction, and the weight of their opinion is as often thrown on one side as on the other. They represent also a very important population of the town, and it is probably not incorrect to say that the people who carry on the minor descriptions of business in the town are very largely Mahomedans. And looking to the fact that under our elective system the Europeans get a proportion of members much larger than the Mahomedans do, the Mahomedans will more particularly suffer from the operation of the last clause of section 8. If any special constituencies are desirable, Mahomedans should certainly not be left out in the cold. I do think that it is extremely desirable that the Bill should go forth with the strictest appearance

of impartiality to all interests as far as possible, but I cannot say that this clause bears that stamp to my mind. All parties are satisfied with the Government nominations. The Corporation themselves, who have voted on this question twice, have almost unanimously expressed their preference for nomination by Government. There can be no possible question that the very last possible body that would be overlooked in nominations would be the commercial and trading interests. At the same time all would get their fair share, and there is no doubt the Mahomedans would feel their position more secure if the Government retain all the nominations in their hands. And to me it certainly does seem that if we are selecting special constituencies, to ignore Mahomedans is a flaw which I for one much regret.

His Honour the President said:—I had not intended to take any part in the debate on this question, at all events at the present time. But from the remarks which fell from the last speaker, I presume that I should do well to explain my position in reference to this section. The section is one for disposing of a certain number of nominations which have hitherto been in the hands of the Government, and transferring them to certain elective bodies. My hon. friend Sir Henry Harrison said that he hoped the fact of his being the member in charge of the Bill would not be in any way a hindrance to his voting according to his conscience. I wish to make it clear that I am in no way the keeper of my hon. friend's conscience. But more than that, his remark induces me to state most distinctly that on this point I have not the slightest desire to influence any one's vote. My own position in reference to the point under discussion is one almost of indifference. I feel very much as Sir Richard Temple said when the question was originally before him—the question whether one-third or one-fourth of the Commissioners should be nominated—that he really cared neither one way or the other, and was quite willing to leave it to the Council to decide. The only purpose to which nomination could be properly put was to redress anything like a monopoly of representation. For that purpose I hold it to be a very valuable power in the hands of the Government. I cannot but feel the force of what the Chairman of the Corporation has said that the tendency will probably be for the majority of the elected Municipal Commissioners to become more and more the representatives of a single class. By "class" I do not mean either Hindu, Mahomedan or European, but people of one way of thinking and of one set of habits, and it is in that point that the danger of a tyranny of the majority is always more likely to lie. I should be anxious, in regard to municipal representation, as in political representation, to provide in a fair way for minorities, to introduce diversity of thought, in any bodies of this kind. If the elective representatives are all professional men, I should like to bring in representatives of the wealthier classes who are not willing to stand for election. If the whole were of one religion, I should like to bring in men of another religion. And the same as to particular interests. If the elected Commissioners represented one special interest, I should consider it my duty to nominate persons of another interest. But I quite agree with my hon. friend, Sir Alfred Croft, that the question ought not to be considered as a question of Europeans *quâ* Europeans, or Mahomedans *quâ* Mahomedans, or Hindus *quâ* Hindus. It is not from the point of religion, but from the point of view of earnestness of direction towards progress or towards reform which they would be likely to bring into the body of the Corporation that the question of what class a candidate belongs to has to be considered, and I think that is what my hon. friend, Sir Alfred Croft, meant, and that Sir Henry Harrison has a little misunderstood him. I must take the opportunity to say that I was sorry to see the remark made by the British Indian Association that the native Commissioners are to be repressed in every way, and that we are practically destroying the influence of the natives. Can anybody suppose that if the proposals made by the Select Committee are adopted, the influence of the native Commissioners will be in any way destroyed or repressed? I should have thought that had it been possible to have the heads of the great European firms as representatives of trade and commerce, it would be a help, a strength and an honour to the Corporation. My own fear is just the contrary, that you will never be able to get the representatives of commerce to go out of their way to bring their knowledge and practical ability to bear on the affairs of the town. I wish it could be otherwise.

To come back to this particular point, my own position is this. The proposal of the Select Committee will have the effect of whittling away to a certain extent the power of the Local Government in regard to making nominations, and for that reason I shall vote for it. I think that as time goes on, it will probably be found more and more possible to keep down the proportion of nominations left in the hands of the Government; but at the same time I am not insensible of the objections which have been brought forward to the proposals of the Select Committee as to their particular distribution. There is something in what was said that there is no guarantee that these bodies, whatever they may represent to-day, will represent the same interests hereafter. And if you once stereotype the particular distribution, you will have to go through a long and disagreeable process to alter it. At the same time the Select Committee have given the subject serious thought; and I am not sure that any better proposal can be made. It would be unseemly for me at least to vote for bringing the whole of the nominations back to the hands of the Government, but I have not the slightest wish to influence any hon. member from voting as he wishes.

The HON. MR. MACAULAY said :—After the speeches of His Honour the President and my hon. friend Sir Alfred Croft, I have little to say, as most of the objections which have been brought against the clause have been answered. I should like, however, to assure my hon. friend, the mover of the amendment, that there was not the smallest idea in the minds of those responsible for the framing of the clause of injuring the interests of Mahomedans ; and I must say that I have had some difficulty in understanding how my hon. friend and the Mahomedan Literary Society have come to persuade themselves that there was any such idea. My hon. friend has expressed his high appreciation of the importance of commercial bodies in Calcutta, and of the benefit which the town has derived from commerce. Is he prepared to say that 10 is too large a number of Commissioners for Government to nominate to represent them, and if so, where is the danger to Mahomedans in reserving this number out of the 25 to commercial bodies? My hon. friend opposite, Dr. Gooroo Das Banerjee, said that the proposal is unnecessary, because no one has objected to the present system as unfair. He forgot, however, that it had been found to be inconvenient ; and this brings me to my hon. friend Sir Henry Harrison's objection, which I myself consider the very strongest point in favour of the clause as it stands. Sir Henry Harrison argued that because hitherto, with one distinguished exception, members of the Chamber of Commerce have not regularly attended meetings, therefore there is a danger that those now to be elected by them will not, and that thus valuable votes will be lost. But would not the Chamber be more likely to find men among the commercial community willing to take a part in the management of the town than the Government? The objection to the present system is that Government has difficulty in finding men willing to be nominated, and that those nominated are unwilling to take a share in the work. I can say from my own experience that I have had, on the occasion of one vacancy, to write to four gentlemen in succession on behalf of Government before one could be found to fill it. I maintain that the Chamber will be better able than Government to find commercial men with a taste for Municipal work and a willingness to serve, and that those elected would feel a sense of responsibility which would impel them to discharge duly the functions entrusted to them. I therefore ask the Council to accept the clause as sound in principle and convenient in practice.

The HON. MR. MOORE said :—I beg leave to say a few words on this subject so far as it refers to the Chamber of Commerce. I support the hon. member who has just spoken in voting for section 8 entirely on the question of principle, in doing which I believe I am reflecting the feelings of the class I specially represent As I understand it, the highest authorities in connection with this Bill have conceded that the paramount interests concerned are commercial, and there can be no doubt that the paramount commercial interests are those represented by the Chamber of Commerce. The hon. member in charge of the Bill has expressed a doubt whether the Chamber of Commerce will always fully represent these interests,

and he has quoted a precedent against it, the correctness of which I must admit. But it is my deliberate opinion that a similar state of things will never occur again, and that it may be accepted that the Chamber is, and always will be, thoroughly representative. The Hon. Babu Kali Nath Mitter has, however, twitted Europeans with shewing an indifference to municipal affairs amounting to cancelment of their claims for consideration; but I find in the papers before us innumerable memorials about this Bill from European Associations which I submit betoken a condition of active agitation totally incompatible with apathy. It has been further alleged that they shew an unwillingness to serve as Commissioners, and in regard to this the Hon. Babu Kali Nath Mitter has said that they will never sacrifice five hours of their time discussing important affairs; but the view of Europeans is that the Municipality takes five hours to do what might be done in one, and what they will not do is to waste four hours of valuable time. This I know from personal experience has been the main cause which has deterred European merchants from accepting nominations to the Municipality. They are not backward when representatives are required to act upon the Committee of the Chamber, upon the Port Trust, and other commercial associations, all which represent public and not merely personal interests; but the predominant feature of these bodies is to get through the largest amount of work in the briefest space of time, and if a larger infusion of the European element will work a reform in this direction in municipal procedure, and bring the meetings of the Corporation into practical compass, I do not believe there will be any difficulty in getting merchants to do their duty as citizens in municipal matters as they do in reference to matters commercial.

The Hon. the Advocate-General said:—It seems to me that this discussion is of very little importance after the declaration of the Hon. the President that he intends to support the amendment, because, under the existing law, the Local Government is competent to appoint ten Commissioners from the three bodies mentioned. He may make rules, and if representatives of the Chamber of Commerce and the other two bodies are selected according to such rules, His Honour may appoint them. Instead, however, of nominating members executively the Bill proposes to effect the same object legislatively. It is very important that commercial interests should be largely represented in the Municipal Corporation, and it becomes a small question whether the Government having made up its mind to appoint a certain number of commercial men did so under rules provided for their election, or gave these commercial bodies themselves directly the power to make the election. It is a question whether the power of the Government to nominate should in part be given over to three public bodies who possess and represent important interests in municipal administration. I often hear complaints made by different sections of the community as to the want of representation of particular sections of the community in the Municipal Corporation. We are not here to legislate on sentimental considerations, or to regard feelings in the matter; our duty is to constitute an administration which will be effective, and there is scarcely the slightest doubt that the commercial element is essentially necessary for administering the affairs of the town in which they must be very largely interested. That being so, and it being quite plain that members of the commercial community must be selected, what becomes of the argument of the hon. member who opposed the amendment that the Mahomedan community will suffer? The interests of the Mahomedans could not possibly suffer by the appointment of ten mercantile gentlemen. If there are Mahomedans who are largely interested in trade and commerce, their interests will be well represented by members nominated by the three public bodies. The objection that the Mahomedans will suffer in consequence of the commercial interest being represented as proposed is without foundation and a mere sentiment. If it be supposed that their interests will suffer, although we may regret the circumstance, we cannot let that consideration interfere with the admitted necessity of strengthening the commercial interest in the Municipal Corporation.

The Hon. Mr. Irving said:—The Calcutta Traders' Association has now been in existence upwards of fifty years, and no doubt its Members are all busy men; and though they have probably less time to spare than members

of the Chamber of Commerce, yet I am certain that many of them are quite willing to give up a certain portion of their time for a public purpose of this kind.

The HON. BABU KALI NATH MITTER said :—There seems to be some misapprehension on this subject. I have no objection to members of the commercial community being represented in the Municipality. All that I said on the last occasion was that if they took an interest in municipal administration, they would become valuable members. I was opposed to this proposal of the Select Committee on the ground that it would be an invidious distinction conferred upon a few public bodies out of a large number of similar Associations. As to the observation made by the hon. member in charge of the Bill that the Mahomedan community will suffer, I think it came from him in an awkward manner, seeing that he is the most enthusiastic supporter of the principle of plurality of votes which directly goes to the principle of election, and will operate to the detriment of that community. I think the Mahomedans may fairly say : "Save us from our friend."

The Motion being put, the Council divided :—

Ayes 5.	*Noes* 8.
The Hon. Dr. Gooroo Das Banerjee.	The Hon. C. H. Moore.
The Hon. Dr. Mohendralal Sircar.	The Hon. G. Irving.
The Hon. Babu Kali Nath Mitter.	The Hon. Sir Alfred Croft.
The Hon. Moulvie Abdul Jubbar.	The Hon. T. T. Allen.
The Hon. Sir Henry Harrison.	The Hon. C. P. L. Macaulay.
	The Hon. H. J. Reynolds.
	The Hon. the Advocate-General.
	His Honour the President.

So the motion was negatived.

The HON. DR. GOOROO DAS BANERJEE moved that in line 3 of section 8, for the word "resident" the words "residing or personally carrying on business" be substituted. He said :—On reasonable principles the grounds upon which one ought to be allowed the right to vote are—*first*, the payment by him of a certain rate of taxation, and *secondly*, his having an interest in the administration of the Municipality. Now, there may be many rate-payers who may pay a large amount of taxes to the Municipality, such as fees for licenses to carry on certain professions, and yet they may not reside in Calcutta in the strict sense of the term. So far as the first condition is concerned, viz., the payment of a certain amount of taxes, they evidently satisfy it. Then as to the second condition as to whether they have any interest in the administration of the Municipality although it may not be strictly true that they reside within the town, yet they may reside within it for 15 out of the 24 hours in the day. In such a case to preclude them from voting merely because they do not, in the strictest sense, reside within the limits of the Municipality would be hardly just. That is an anomaly which ought to be removed.

The HON. SIR HENRY HARRISON said :—I do not attach any very great importance to this question, but on the whole I think it better to leave the Bill as it stands. As long as the Suburbs and Calcutta were under entirely different bodies, a very large number of persons came into Calcutta from the Suburbs for purposes of business. Now, these persons will all be in Calcutta, and therefore the amendment will be almost inoperative; but under the amendment some persons living out of the enlarged Calcutta, such as at Howrah, or up the line would still get a vote for the business which they carry on in Calcutta, and it is on the whole but fair that those who do not reside within the limits of the Municipality should leave the administration of its affairs to those who do.

The Motion being put, the Council divided :—

Ayes 5.	*Noes* 8.
The Hon. Dr. Gooroo Das Banerjee.	The Hon. C. H. Moore.
The Hon. Dr. Mohendralal Sircar.	The Hon. G. Irving.
The Hon. Babu Kali Nath Mitter.	The Hon. Sir Henry Harrison
The Hon. Moulvie Abdul Jubbar.	The Hon. T. T. Allen.
The Hon. Sir Alfred Croft.	The Hon. C. P. L. Macaulay.
	The Hon. H. J. Reynolds.
	The Hon. the Advocate-Genaral.
	His Honour the President.

So the motion was negatived.

The Hon. Mr. Irving, in moving the omission of clause (*f*) of section 8, said:—The Amalgamation Committee, at page 9 of their Report, in speaking of the University, remark: "We do not say that the class who constitute it do not find adequate representation under the existing system, but the University has clearly a large interest in the metropolis, and it forms a most honourable and highly qualified constituency."

There can be no doubt that most of the fellows and many of the graduates are already qualified in virtue of their being rate-payers. And although this is not the case with a certain proportion of the younger graduates, I can see no sufficient reason for giving them a vote apart from the primary qualification derived from the payment of rates. Graduates pass through the University annually in hundreds, and might, in course of time, if not immediately, cause a serious disturbance of the balance of voting power in certain wards.

I may remark that the Mahomedans are at one with the Europeans on this question, so that the proposal is refined down to a concession to the Hindus, who already possess so disproportionate a share of voting power. I therefore move that clause (*f*) of section 8 be omitted.

The Hon. Sir Alfred Croft said:—As I intend to support this amendment, I had better explain my reasons for doing so. It would be quite out of place for me to refuse, and I have no intention of refusing, any legitimate claim that may reasonably be put forward on behalf of fellows and graduates of the University. But I have not been able to satisfy myself that this particular claim is a reasonable one. No question of course can arise as to the fitness of graduates to vote, and no one can dispute that they would vote with intelligence and discretion. I am sure that the tendency of the graduate vote would be to return as Municipal Commissioners men of high character and position. But it seems to me that the question is not solely one of fitness. I doubt whether the question is at all one of fitness directly. The question of fitness does not enter into those which I consider the leading clauses of this section, clauses (*a*) to (*e*), which give the right to vote to the owner and occupier of houses, to those who pay rates and taxes, and to those who carry on any trade or business; and these I conceive to be the only true and safe principle on which to proceed in deciding the qualifications for a voter. Clause (*f*) proceeds on an entirely new, and as I consider, a wrong and faulty principle. It is this: that the persons who pay the taxes are not competent to decide how those taxes should be spent without calling in men of superior learning to help them. Or else it means that men of superior learning have a claim to dispose of funds to which they themselves have not contributed. I quite agree that it is possible to conceive cases where the possession of a degree might reasonably be held to give a man the right to vote, for instance, in the election of members of Parliament, where the questions for consideration are the most weighty and varied that men can have to deal with. But when, twenty-five years ago, an attempt was made to introduce the Graduate vote, the sense of the nation at once rejected it as a 'fancy franchise.' It seems to me that the only safe principle, beyond which it is dangerous to go, is to give the right to vote according to the interest which the voter has in the prosperity of the town and the development of trade and commerce. It may be said that the vote may safely be conceded to graduates, because they are a very deserving and enlightened class of men. But cases may arise very soon where giving the graduate vote might cause injustice. Section 36 of the Bill defines the objects upon which the municipal fund is to be spent, and I believe that under one of its clauses the establishment and maintenance of free libraries might possibly be included. Again, there is an amendment before the Council in favour of supporting schools for primary and technical education. Both these objects I consider not only laudable, but entirely within the scope of a Municipality; and it is pretty certain that the Graduate vote would generally be given in their favour. But I hold that we are not entitled to call in the assistance of the Graduate vote. For if free libraries are to be established, or primary and technical schools to be maintained, the persons who should decide this question are those who will have to pay the bill and no others.

But putting aside the question of principle, I come to the form which the clause assumes. The qualification is given to fellows and graduates. Now the corresponding clause in the Bengal Municipal Act gives the franchise to

To come back to this particular point, my own position is this. The proposal of the Select Committee will have the effect of whittling away to a certain extent the power of the Local Government in regard to making nominations, and for that reason I shall vote for it. I think that as time goes on, it will probably be found more and more possible to keep down the proportion of nominations left in the hands of the Government; but at the same time I am not insensible of the objections which have been brought forward to the proposals of the Select Committee as to their particular distribution. There is something in what was said that there is no guarantee that these bodies, whatever they may represent to-day, will represent the same interests hereafter. And if you once stereotype the particular distribution, you will have to go through a long and disagreeable process to alter it. At the same time the Select Committee have given the subject serious thought; and I am not sure that any better proposal can be made. It would be unseemly for me at least to vote for bringing the whole of the nominations back to the hands of the Government, but I have not the slightest wish to influence any hon. member from voting as he wishes.

The Hon. Mr. Macaulay said:—After the speeches of His Honour the President and my hon. friend Sir Alfred Croft, I have little to say, as most of the objections which have been brought against the clause have been answered. I should like, however, to assure my hon. friend, the mover of the amendment, that there was not the smallest idea in the minds of those responsible for the framing of the clause of injuring the interests of Mahomedans; and I must say that I have had some difficulty in understanding how my hon. friend and the Mahomedan Literary Society have come to persuade themselves that there was any such idea. My hon. friend has expressed his high appreciation of the importance of commercial bodies in Calcutta, and of the benefit which the town has derived from commerce. Is he prepared to say that 10 is too large a number of Commissioners for Government to nominate to represent them, and if so, where is the danger to Mahomedans in reserving this number out of the 25 to commercial bodies? My hon. friend opposite, Dr. Gooroo Das Banerjee, said that the proposal is unnecessary, because no one has objected to the present system as unfair. He forgot, however, that it had been found to be inconvenient; and this brings me to my hon. friend Sir Henry Harrison's objection, which I myself consider the very strongest point in favour of the clause as it stands. Sir Henry Harrison argued that because hitherto, with one distinguished exception, members of the Chamber of Commerce have not regularly attended meetings, therefore there is a danger that those now to be elected by them will not, and that thus valuable votes will be lost. But would not the Chamber be more likely to find men among the commercial community willing to take a part in the management of the town than the Government? The objection to the present system is that Government has difficulty in finding men willing to be nominated, and that those nominated are unwilling to take a share in the work. I can say from my own experience that I have had, on the occasion of one vacancy, to write to four gentlemen in succession on behalf of Government before one could be found to fill it. I maintain that the Chamber will be better able than Government to find commercial men with a taste for Municipal work and a willingness to serve, and that those elected would feel a sense of responsibility which would impel them to discharge duly the functions entrusted to them. I therefore ask the Council to accept the clause as sound in principle and convenient in practice.

The Hon. Mr. Moore said:—I beg leave to say a few words on this subject so far as it refers to the Chamber of Commerce. I support the hon. member who has just spoken in voting for section 8 entirely on the question of principle, in doing which I believe I am reflecting the feelings of the class I specially represent As I understand it, the highest authorities in connection with this Bill have conceded that the paramount interests concerned are commercial, and there can be no doubt that the paramount commercial interests are those represented by the Chamber of Commerce. The hon. member in charge of the Bill has expressed a doubt whether the Chamber of Commerce will always fully represent these interests,

and he has quoted a precedent against it, the correctness of which I must admit. But it is my deliberate opinion that a similar state of things will never occur again, and that it may be accepted that the Chamber is, and always will be, thoroughly representative. The Hon. The Hon. Sir Henry Harrison.	The Hon. C. P. L. Macaulay.
	The Hon. H. J. Reynolds.
	The Hon. the Advocate-General.
	His Honour the President.

So the motion was negatived.

The Hon. Dr. Gooroo Das Banerjee moved that in line 3 of section 8, for the word "resident" the words "residing or personally carrying on business" be substituted. He said :—On reasonable principles the grounds upon which one ought to be allowed the right to vote are—*first*, the payment by him of a certain rate of taxation, and *secondly*, his having an interest in the administration of the Municipality. Now, there may be many rate-payers who may pay a large amount of taxes to the Municipality, such as fees for licenses to carry on certain professions, and yet they may not reside in Calcutta in the strict sense of the term. So far as the first condition is concerned, viz., the payment of a certain amount of taxes, they evidently satisfy it. Then as to the second condition as to whether they have any interest in the administration of the Municipality although it may not be strictly true that they reside within the town, yet they may reside within it for 15 out of the 24 hours in the day. In such a case to preclude them from voting merely because they do not, in the strictest sense, reside within the limits of the Municipality would be hardly just. That is an anomaly which ought to be removed.

The Hon. Sir Henry Harrison said :—I do not attach any very great importance to this question, but on the whole I think it better to leave the Bill as it stands. As long as the Suburbs and Calcutta were under entirely different bodies, a very large number of persons came into Calcutta from the Suburbs for purposes of business. Now, these persons will all be in Calcutta, and therefore the amendment will be almost inoperative; but under the amendment some persons living out of the enlarged Calcutta, such as at Howrah, or up the line would still get a vote for the business which they carry on in Calcutta, and it is on the whole but fair that those who do not reside within the limits of the Municipality should leave the administration of its affairs to those who do.

The Motion being put, the Council divided :—

Ayes 5.	*Noes* 8.
The Hon. Dr. Gooroo Das Banerjee.	The Hon. C. H. Moore.
The Hon. Dr. Mohendralal Sircar.	The Hon. G. Irving.
The Hon. Babu Kali Nath Mitter.	The Hon. Sir Henry Harrison.
The Hon. Moulvie Abdul Jubbar.	The Hon. T. T. Allen.
The Hon. Sir Alfred Croft.	The Hon. C. P. L. Macaulay.
	The Hon. H. J. Reynolds.
	The Hon. the Advocate-Genaral.
	His Honour the President.

So the motion was negatived.

The Hon. Mr. Irving, in moving the omission of clause (*f*) of section 8, said:—The Amalgamation Committee, at page 9 of their Report, in speaking of the University, remark: "We do not say that the class who constitute it do not find adequate representation under the existing system, but the University has clearly a large interest in the metropolis, and it forms a most honourable and highly qualified constituency."

There can be no doubt that most of the fellows and many of the graduates are already qualified in virtue of their being rate-payers. And although this is not the case with a certain proportion of the younger graduates, I can see no sufficient reason for giving them a vote apart from the primary qualification derived from the payment of rates. Graduates pass through the University annually in hundreds, and might, in course of time, if not immediately, cause a serious disturbance of the balance of voting power in certain wards.

I may remark that the Mahomedans are at one with the Europeans on this question, so that the proposal is refined down to a concession to the Hindus, who already possess so disproportionate a share of voting power. I therefore move that clause (*f*) of section 8 be omitted.

The Hon. Sir Alfred Croft said:—As I intend to support this amendment, I had better explain my reasons for doing so. It would be quite out of place for me to refuse, and I have no intention of refusing, any legitimate claim that may reasonably be put forward on behalf of fellows and graduates of the University. But I have not been able to satisfy myself that this particular claim is a reasonable one. No question of course can arise as to the fitness of graduates to vote, and no one can dispute that they would vote with intelligence and discretion. I am sure that the tendency of the graduate vote would be to return as Municipal Commissioners men of high character and position. But it seems to me that the question is not solely one of fitness. I doubt whether the question is at all one of fitness directly. The question of fitness does not enter into those which I consider the leading clauses of this section, clauses (*a*) to (*e*), which give the right to vote to the owner and occupier of houses, to those who pay rates and taxes, and to those who carry on any trade or business; and these I conceive to be the only true and safe principle on which to proceed in deciding the qualifications for a voter. Clause (*f*) proceeds on an entirely new, and as I consider, a wrong and faulty principle. It is this: that the persons who pay the taxes are not competent to decide how those taxes should be spent without calling in men of superior learning to help them. Or else it means that men of superior learning have a claim to dispose of funds to which they themselves have not contributed. I quite agree that it is possible to conceive cases where the possession of a degree might reasonably be held to give a man the right to vote, for instance, in the election of members of Parliament, where the questions for consideration are the most weighty and varied that men can have to deal with. But when, twenty-five years ago, an attempt was made to introduce the Graduate vote, the sense of the nation at once rejected it as a 'fancy franchise.' It seems to me that the only safe principle, beyond which it is dangerous to go, is to give the right to vote according to the interest which the voter has in the prosperity of the town and the development of trade and commerce. It may be said that the vote may safely be conceded to graduates, because they are a very deserving and enlightened class of men. But cases may arise very soon where giving the graduate vote might cause injustice. Section 36 of the Bill defines the objects upon which the municipal fund is to be spent, and I believe that under one of its clauses the establishment and maintenance of free libraries might possibly be included. Again, there is an amendment before the Council in favour of supporting schools for primary and technical education. Both these objects I consider not only laudable, but entirely within the scope of a Municipality; and it is pretty certain that the Graduate vote would generally be given in their favour. But I hold that we are not entitled to call in the assistance of the Graduate vote. For if free libraries are to be established, or primary and technical schools to be maintained, the persons who should decide this question are those who will have to pay the bill and no others.

But putting aside the question of principle, I come to the form which the clause assumes. The qualification is given to fellows and graduates. Now the corresponding clause in the Bengal Municipal Act gives the franchise to

The following letters from the Port Officer, Calcutta, submitting representations from certain Junior and Senior Masters and Mate Pilots on the subject of their grievances :—

No. 4996, dated 12th December 1886.
" 59, " 6th January 1887.
" 69, " 6th January 1887.

In the letter to the Government of India, cited above, No. 3389, dated the 3rd August 1887, the distinction between 'Service' and 'Licensed' Pilots is explained with special reference to the application of the 55 years' retirement rule. The pilots commonly known as 'Service' Pilots are members of the Covenanted Bengal Pilot Service, and are permanent servants of Government. They were at first paid fixed salaries, but were afterwards allowed to exchange these for a percentage of the pilotage fees earned by them; and those of them who did so were said to have "gone on the free list." All the Service Pilots are now paid in this manner. They are also compelled to retire at the age of 55 under a stringent rule which permits them to retain office only in special cases with the sanction of the Secretary of State.

The position of the Licensed Pilot Service is quite different. This portion of the service was established in 1856, because the members of the regular service were unable to cope with the work. They have no privileges as regards pension or allowances when on leave, and they did not receive their licenses for any particular term of years. Although, however, the licenses may be technically revocable, Government has respected their claims as far as possible, and has passed rules for the purpose of equalising promotion in the two branches. There is no actual rule necessitating the retirement of these pilots at any particular age, but the practical effect of the orders which have been passed in particular cases has been to extend to them the general rule applicable to the Uncovenanted Service, under which the retirement of an officer is not enforced if the Lieutenant-Governor considers him fit to perform his duty.

3. The annual report of the Port Officer for 1886-87 shows that for the last 10 years the average tonnage of the shipping visiting the Port has increased, while the average number of vessels visiting the Port has decreased. A comparison of the two quinquennial periods—1877-78 to 1881-82 and 1882-83 to 1886-87—shows that the average tonnage of vessels entering the Port rose from 1,567 tons in the former to 1,870 tons in the latter period; while on the other hand the average number of vessels entering the Port fell from 1,058 to 1,038. In the year 1886-87 the average tonnage of vessels entering the Port was 2,002, while the number of vessels was 1,020. This increase in the average tonnage, combined with the decrease in the actual number of ships, has necessarily given an increasing share of the work to the senior pilots; and while the position of the junior pilots has grown steadily worse, the higher grades, or at least the Branch Pilots and the elder members of the Senior Master grade, have been earning large incomes. Nor is this inequality in earnings the only evil result; for the juniors, by this enforced idleness, are likely to lose their knowledge of the river, and their confidence in handling a ship. A remedy for this state of things has twice been sought in a redistribution of tonnage amongst the different grades of pilots. The following table shows the alterations which have been made :—

	Tonnage up to 1881.	As fixed in 1881.	As fixed in 1885.
	Tons.	Tons.	
Branch Pilots	Above 1,600 ...	Above 1,700 ...	2,000 tons and upwards.
Senior Masters	800 to 1,600 ...	801 to 1,700 ...	900 to 2,000 tons.
Junior "	800 to 1,600 ...	801 to 1,350 ...	900 to 1,450 "
Mates	Up to 800 ...	Up to 800 ...	Up to 900 "

The Committee appointed in 1881 also showed that 60 pilots would be sufficient to work the shipping in the Hooghly, and suggested that from 1886 the number should be reduced to that number. This suggestion, which commended itself to the Lieutenant-Governor, was approved by the Government of India.

4. The last redistribution of tonnage took effect from the 1st February 1885; but it is clear from the subjoined table that the increase in the average tonnage of the ships has more than counterbalanced the effects of it:—

Year.	Number of vessels of the tonnage available for the grade.	Average monthly number of vessels actually piloted by each pilot.	Number of pilots at work on 1st January, excluding special pilots.	Average monthly earnings of an individual of each grade for each month of actual work.	
				Service.	Licensed.

* The Senior Masters may, however, pilot also the vessels shown as available for the Junior Masters' grade.

For the purpose of improving the position of the Junior Masters and the Mates, the time of service in the Junior Master's grade has been reduced from 5 to 3 years; while Government has undertaken to pay the actual expenses, within certain limits, of Mate Pilots proceeding to the Sandheads in search of work. It is clear, however, from the figures given above, that much more than this is required. The Lieutenant-Governor has accordingly decided to refer the whole question for consideration and report to a representative Committee, to be constituted as follows:—

The Hon'ble H. J. Reynolds, C.S.I., Chairman of the Port Commissioners, Calcutta ... ... *Chairman.*

Members.

- Mr. J. L. Mackay, nominated by the Bengal Chamber of Commerce.
- Captain A. W. Stiffe, Port Officer, Calcutta.
- Mr. F. T. Rayner, Senior Master Pilot.
- ,, F. T. Paine, Mate Pilot.

As the Government of India has desired that the question of compulsory retirement raised in Mr. Daly's case should be considered in connection with these questions, this subject also will form the subject of a report by the Committee.

By order of the Lieutenant-Governor of Bengal,

COLMAN MACAULAY,

Secretary to the Govt. of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 11th February 1888.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
BURDWAN DIVN.	1	Burdwan, Feb 11, '88	0·52	Weather—cloudy and cold. Prospects of winter crops good. Prices stationary.
	2	Bankoora „ 11, '88	0·88	Weather—cold since rainfall. Harvesting of mustard and pulses has commenced. Rain has been very beneficial to wheat, barley, gram, and cotton. No appreciable change in the rice market.
		Bishenpur ...	1·06	
	3	Beerbhoom „ 11, '88	0·55	Weather - cooler. *Rubbi* has been benefited by rain. Sugarcane is being cut and pressed.
		Rampur Hat ...	0·34	
	4	Midnapur „ 11, '88	1·56	Weather—cloudy and hot at the beginning of the week; cold after the rain. *Boro* cultivation going on. Prospects of winter crops good.
	5	Hooghly „ 11, '88	1·13	Weather—cloudy and wet. Ploughing of rice lands now going on. *Rubbi* harvest progresses with good outturn, especially of sugarcane.
		Howrah „ 13, '88	1·44	Weather—clear and cold during the first part of the week, cloudy and rainy during the latter part. Harvesting of *amun* over. Cutting of sugarcane continues. Prospects of winter crops satisfactory.
		Oolooberia ...	0·35	
		Central Districts.		
PRESIDENCY DIVN.	6	24-Perghs. Feb 14, '88	1·68	Weather—cloudy and rainy. Harvesting of *amun* nearly over. Prospects of winter crops satisfactory. Ploughing continues. Manufacture of sugar still going on.
	7	Nuddea „ 11, '88	0·65	Weather—cloudy, but seasonable. Prospects of *rubbi* good.
		Meherpur ..	0·70	
		Chooadanga ..	0·25	
		Ranaghat	0·24	
	8	Khoolna „ 11, '88	0·75	Weather - cool on account of rainfall. Harvesting of *amun* and transplantation of *boro* rice almost completed. Prospects of winter crop good.
	9	Jessore „ 11, '88	1·11	Weather—cloudy with showers of rain in the latter part of the week. Harvesting of *amun* crop is over. Winter crops doing well.
		Bongong ..	0·12	
	10	Moorshedabad „ 11, '88	0·57	Weather—cloudy. *Rubbi* crops promising. Rain has benefited all crops on the ground.
		Lalbagh ..	0·55	
		Kandi ...	0·58	
		Jungipur ...	0·18	
RAJSHAHYE DIVN.	11	Dinagepur Feb. 11, '88	Nil	Weather—warm during early part of week, latterly cold. Harvesting of winter rice almost over. Prospects of standing crops good. Price of rice remains stationary.
	12	Rajshahye „ 11, '88	0·55	Weather—somewhat cloudy for the last three or four days. Prospects of *rubbi* crops good. Harvesting of *ganja* going on with good prospect. More rain is wanted for standing crops.
	13	Rungpur „ 11, '88	0·09	Weather—unsettled and very cold. Hardly any crops on the ground except tobacco, which is doing well.
	14	Bogra „ 11, '88	0·50	Weather—seasonable. Slight rain on the 9th and 10th. Cold-weather crops promise well. Price of rice stationary.
	15	Pubna „ 11, '88	0·81	Weather—rainy during the latter part of the week. Prospects of crops continue good.
	16	Darjeeling „ 11, '88	0·81	Passing showers. Six inches of snow fell in the station in one day. State and prospects of crops good.
	17	Julpigoree „ 11, '88	0·15	Weather—mornings foggy in the beginning of the week; latterly cloudy. Harvesting of winter rice over; outturn ten to twelve annas. Prospects of cold-weather crops continue good. Common rice sells at 20 seers per rupee at the Sudder station.
		Eastern Districts.		
DACCA DIVISION.	18	Dacca, Feb. 11, '88	0·61	Weather—cloudy and cold. Ploughing and sowing of *aus* paddy and jute continue. Winter crops doing well; outturn expected to be good.
	19	Furreedpur „ 11, '88	0·69	Weather—cloudy. Rain on the 10th. Prospects of standing crops fair. Land is being ploughed.
		Goalundo ...	0·45	
	20	Backergunge „ 10, '88	Nil	Weather—seasonable. Prospect of crops continues good.
	21	Mymensingh „ 10, '88	Slight rain.	Weather—cloudy and cool. State and prospects of all crops satisfactory.
CHITTAGONG DIVN.	22	Chittagong Feb. 14, '88	0·29	Weather—variable. Prospects of crops good. Prices stationary.
	23	Noakholly „ 10, '88	Nil	Weather—seasonable; latter end of the week cloudy and warm. *Rubbi* crops doing well.
	24	Tipperah „ 9, '88	Nil	Weather—cold and seasonable and occasionally cloudy. Lands are being prepared for *aus* and jute crops. In places harvesting of *rubbi* crops is going on. Prospects excellent.
	25	Chittagong Hill Tracts. „ 7, '88	Nil	Weather—cold in the morning and hot at daytime. Harvesting of mustard is almost finished. Condition of all existing cold-weather crops is generally good. Pressing of sugarcane continues.
		Hill Tipperah „ 8, '88	Nil	Weather—cold. Sugarcane is still being cut. Tobacco and mustard doing well.

No	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR				
Patna Divn.				
26	Patna	Feb. 11, '88	Nil	Weather—cool and cloudy. Prospects of spring crops continue favourable. Poppy in flower and promises well. Prices of food-grains stationary.
27	Gya	" 11, '88	Drizzling rain.	Weather—cold. Threshing of paddy almost finished. *Rubbi* progressing tolerably well. Opium is being extracted.
28	Shahabad	" 11, '88	0·01	Weather—cloudy and exceedingly cool. Prospects of *rubbi* crops continue hopeful, though some apprehension is entertained on account of cloudy weather. In places harvesting has commenced. State of the poppy crop is excellent in spite of unfavourable weather; the collection of opium has begun and the outturn is reported to be good.
29	Durbhunga	" 11, '88	Nil	Weather—occasionally cloudy. *Rubbi* prospects continue very favourable. Mustard and tobacco are being harvested. Lands are being prepared for indigo. Prices stationary.
30	Mozufferpur	" 11, '88	Nil	Weather—mostly overcast and cold with strong westerly wind; now clear and seasonable. Prospects of crops, including poppy, fair; but cloudy weather was unfavourable to *rubbi* crops generally and strong west winds to poppy.
31	Sarun	" 11, '88	Nil	Weather—cloudy with occasional sunshine. Prospect of all crops continues good.
32	Chumparun	" 11, '88	Nil	Weather—overcast and foggy in the first part of week; latterly cool and clear. Prospects of *rubbi* and poppy continue favourable. *Arhar* doing well.
Bhagulpore Divn.				
33	Monghyr	Feb. 11, '88	0·05	Weather—seasonable; cold and cloudy at the latter part of the week. Prospects of *rubbi* crops continue good. Poppy in flower and promises well.
34	Bhagulpur	" 11, '88	Nil	Weather—cloudy with west wind. Standing crops doing well. Wheat and barley would be benefited by a shower of rain.
35	Purneah	" 11, '88	0·06	Weather—cloudy and cold. Outturn of winter crops reported to be good and not good from different parts.
36	Maldah Shibgunge Gajol	" 11, '88	0·19 0·08 0·10	Weather—cold and cloudy. Harvesting of *kalai* and mustard nearly completed with good outturn. Prospects of *rubbi* crops good. Transplantation of *boro* paddy continues. Common rice selling at an average of 24 seers per rupee.
37	Sonthal Perghs. Pakour	" 11, '88	0·46 0·15	Temperature rising. Weather cloudy towards end of the week with slight showers. Rain beneficial. Prospects of winter crops fair. In Rajmehal a 12-anna crop is expected. Sugarcane is being planted out in Godda. In west of the district there are very few crops on the ground.
ORISSA.				
Orissa Divn.				
38	Cuttack	Feb. 10, '88	Nil	Weather—fair. Reaping of *sarad* completed with fair outturn. *Dalua* rice is growing well. Common rice sells at 20½ seers per rupee in town. Last night's rain (not shown in this return) has facilitated ploughing.
39	Pooree	" 9, '88	Nil	Weather—seasonable. Land is being ploughed. *Dalua* (spring crop) is doing well. Common rice 24 seers 13 chittacks in the Sudder sub-division, and 23 seers 15 chittacks in the Khorda sub-division.
40	Balasore	" 10, '88	1·32	Weather—cloudy and getting a little warm. Threshing of paddy continues. *Rubbi* is still being gathered. Prospects of other spring crops favourable. They will be benefited by the recent rainfall.
CHOTA NAGPORE.				
South-West Frontier Agency.				
Chota Nagpore Divn.				
41	Hazaribagh	Feb. 10, '88	0·41	Weather—cloudy and cold. Rain on the 9th. Cloudy weather is not favourable to wheat, which is approaching maturity, and to mango which is about to be in blossom. *Rubbi* is expected to yield between 6 annas and 8 annas. Rain has done good to sugarcane on the ground. Poppy doing well. Cattle-disease continues to be reported.
42	Lohardugga	" 11, '88	0·71	Weather—cloudy and cold. More rain expected which is likely to do damage to the standing *rubbi* crops. Land is being ploughed. Market steady.
43	Singbhoom	" 10, '88	1·48	Heavy rain fell yesterday (9th February). Weather bright and clear to-day. Rain has fallen all over the district. Cotton is doing well. Outturn of gram expected to be from 6 to 8 annas, and of *til*, mustard, and linseed from 6 to 12 annas. Cattle-disease reported from thanas Baharagora and Khursowah.
44	Manbhoom	" 11, '88	1·19	Weather—cloudy, damp and cold. Rain has facilitated ploughing for next season. Outturn of sugarcane is good; will probably be a bumper. Rice selling at from 16 to 24 seers per rupee.

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, d drizzling rain, t thunder, p passing temporary showers, < lightning, ≡ fog, ⌓ dew.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten
The *humidity* of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number are the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 12 station in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredths of an inch fell.

for the week ending Friday, the 10th of February 1888.

Average humidity at 10 A.M.	Average cloud amount at 10 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean.	Since 1st of January. Mean for district.	Since 1st of January. Normal mean.	Since 1st of January. Variation.	Since 15th May 1887. Mean for district.	Since 15th May 1887. Normal mean.	Since 15th May 1887. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 14*th February* 1888.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 10TH OF FEBRUARY 1888.

THE weather in Bengal during the previous week had been characterised by exceptionally low temperatures, and by the presence of the cold-weather conditions generally in a strongly pronounced form. At the close of that week, however, temperature had commenced to increase very rapidly, and this was accompanied by a rapid fall of pressure, and on the 4th the fall at some stations equalled about a tenth of an inch. The falling pressure and increasing temperature continued on the 5th, but conditions were reversed on the 6th, and a rapid rise of pressure was recorded which was succeeded on the 7th by a fall in the mean temperature of from 3° to 5°. This was, however, only a temporary reversal, and on the 7th, 8th, and 9th pressure steadily fell, the fall on the 9th being rapid, and on this day a distinct area of low pressure was developed over Orissa and the neighbouring parts of West Bengal. This diffused depression afterwards drifted in an easterly direction, and on the 10th pressure was low over South-East Bengal.

The first sign of the commencement of the disturbed conditions was that on the 8th the sky clouded over rapidly in the western districts of the province, and on the 9th the formation of the depression was accompanied by general rain over South-West Bengal and Chutia Nagpur, while showers also fell in Orissa and South Behar. On the 10th, with the movement of the depression in an easterly direction, rain became general over the whole of the province, except Behar and parts of Chutia Nagpur. On both days falls of an inch and upwards were rather numerous. With the rainfall which occurred at the end of the week a rapid diminution of temperature took place, and from the 9th to the 10th at several stations maximum temperature fell more than 10°, while at Raneegunge the fall was no less than 15°. The changes then of meteorological conditions during the week have been large and sudden, pointing clearly to the existence of slightly disturbed conditions throughout the week.

Pressure.—The pressure variations, during the week have already been alluded to, and it will be seen that on the whole there has been a decided fall. Thus during the previous week the mean pressure of the province had been 0·072 inch in excess of the normal. During the present week the mean excess has been reduced to 0·025 inch, but the mean pressure has been almost normal at such stations as Calcutta and Burdwan, showing clearly the effect of the low pressure area before referred to.

Temperature.—The variations of temperature have also been large. but on the whole temperature has risen decidedly during the week, and when the average maximum or day temperatures for the week in the different districts are compared with the averages of the previous week, it is found that there has been an increase of nearly 6° or an average increase of nearly a degree per day; in North Bengal the increase is as great as 8°, while in North Behar it is only 4°. The mean minimum or night temperatures have also increased during the week by about 5°, the extreme variations being from an increase of 7° in North Bengal to one of about 3° in South Behar and Chutia Nagpur. In the previous week temperature was largely below the normal, but the rapid increase during the present week has brought the mean temperature of the province above the normal by 1·5°. In North Bengal temperature is more than 3° above the normal.

The actual variations of temperature from the normal are best shown by the figures in the table below, where the average maximun, minimum and mean temperatures for the week at nine typical stations in different districts of the province are shown, and compared with the normal values for the same period. It will be seen that while the mean maximum temperature at the nine stations has been 1·1° below the normal value, the average minimum or night temperature at the same stations has been 2° in excess of the normal.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending the 10th February 1888.

	Normal mean maximum temperature for the week ending 10th February.	Actual mean maximum temperature for the week ending 10th February 1888.	Excess or defect of the actual from the normal mean.	Normal mean minimum temperature for the week ending 10th February.	Actual mean minimum temperature for the week ending 10th February 1888.	Excess or defect of the actual from the normal mean.	Normal mean daily temperature for the week ending 10th February.	Actual mean daily temperature for the week ending 10th February 1888.	Excess or defect of the actual from the normal mean.

Rainfall—Has been heaviest in Orissa and South-West Bengal, the stations in these two meteorological divisions having received an average fall of from one to one-and-a-quarter inch, in Chutia Nagpur the fall has averaged about three-quarters of an inch, and in East Bengal about half and inch. The fall has been decidedly smaller in North Bengal, where it only averages three-tenths of an inch, while in Behar the fall has been so small that it has not averaged even a tenth of an inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 10th of February 1888:—

METEOROLOGICAL DIVISIONS.	TEMPERATURE.						RAINFALL.

	°
The mean temperature of the seven days	67·8
The extreme variation of temperature	30·8
The maximum temperature	84·7
	%
The mean relative humidity	68.
	Inches.
The total fall of rain from 5th to 11th February 1888	1·69

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
The 13th February 1888.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

During the week ending 21st January 1888, births and deaths were registered in the principal Municipalities in Bengal at the rates respectively, of 20·2 and 25·3 per 1,000 of population against 22·8 and 24·5 per 1,000, respectively during the preceding week ending 14th January, showing a diminution in the registration of births.

2. The following Municipalities returned the highest proportions of births and deaths:—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Monghyr	48·8	Serampur	62·8
Durbhanga	37·0	Suburbs of Calcutta	45·9
Ranaghat	30·0	Utterpara	37·8
		Durbhanga	36·2
		Howrah	36·1
		Beauleah	34·2
		Puri	31·5

3. The mortality from the principal diseases does not exhibit any noticeable difference in comparison with the death-rates from the same diseases during the preceding week:—

	Ratio per *mille* during the weeks ending— 21st Jan. 1888.	14th Jan. 1888.
Cholera	3·0	2·3
Small-pox	·03	·03
Fever	10·9	10·4
Bowel-complaints	4·1	4·2
Injury	·3	·2
Other causes	6·9	7·3

4. The highest death-rates from cholera, fever, bowel-complaints and the diseases classed under the head of "Other causes" were returned from the following Municipalities, the rest of the maladies not proving noticeably fatal anywhere:—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Bowel-complaints.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Serampur	21·6	Beauleah	34·2	Serampur	13·7	Narainganj	16·5
Durbhunga	11·0	Purneah	20·8	Puri	12·6	Serampur	15·7
Suburbs of Calcutta	7·2					Gya	13·7
Howrah	5·7					Suburbs of Calcutta	13·4

5. The mortality referable to *Sex, Class* and *Age* stood as follows:—

According to Sex.

	Ratio per *mille.*
Males	26·3
Females	24·2
Ratio of male deaths to every 100 female deaths	123

According to Class.

	Ratio per *mille.*
Christians	26·1
Hindus	25·1
Mahomedans	25·9

According to Age.

	Ratio per *mille.*
Under 1 year	156·1
1 and under 5 years	32·7
5 ,, 10 ,,	11·1
10 ,, 15 ,,	7·7
15 ,, 20 ,,	14·
20 ,, 30 ,,	16·6
30 ,, 40 ,,	19·7
40 ,, 50 ,,	19·81
50 ,, 60 ,,	28·9
60 years and upwards	80·1

R. Lidderdale, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

The 13*th February* 1888.

Statement showing the Results of the Registration of Births and Deaths in the principal Municipalities in Bengal during the week ending 21st January 1888.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation, owing to the results of the census under this head not having been recorded under the authorised form of age classification.

General remarks on the fluctuation of principal staples carried over the East Indian Railway during five weeks ended 31st December 1887.

INCREASES.

Coal and coke.—There was an increase in the weight of upwards coal with a decrease in the earnings, and in downwards coal there was increase in both weight carried and freight earned. The decrease in the earnings of upwards despatches is due to lesser demands from the North-Western Railway, and the increase in downward traffic to heavier despatches to Sealdah, Chitpore and other stations on the Eastern Bengal State Railway *viâ* the Jubilee Bridge; also to greater demand for coal for brick-burning.

Jute, raw.—Chiefly due to despatches from the Eastern Bengal State Railway *viâ* the Jubilee Bridge.

Gunny.—The increase was chiefly in despatches from Howrah for linseed for immediate shipment to Europe.

Cocoanuts.—Due to reduction in charge for carriage.

Gram and Pulses—Other grains.—The increases shown under these staples are due to despatches from stations on the Loop Line and Dinapore district to stations in the North-West, owing to the scarcity referred to in the report for November having continued during the period under review.

Rice (husked and unhusked).—As with the staples referred to in the preceding paragraph, the despatches of rice were principally upwards to meet demands in the North-West for food-grains; hence this increase.

Government stores.—This increase was almost entirely in ammunition from Howrah.

Lac.—The increase was principally in despatches from Mirzapur owing to an active speculative demand from home.

Iron.—Due to improved demand in Calcutta for despatch to up-country marts.

Oil.—Chiefly in kerosine oil from Howrah.

Railway material, Foreign.—This increase was principally in despatches from *viâ* Jubbulpore for the Indian Midland Railway.

Saltpetre.—The increases were in despatches to Calcutta partly for shipment to China.

Seeds.—The increase was chiefly in linseed to Howrah for export to Europe.

Sugar, refined and unrefined.—The principal increase was in the despatches from the Oudh and Rohilkhund Railway to this Company.

DECREASES.

Cotton.—The serious falling off in this important staple can only be attributed to the partial failure of the cotton crops owing to the heavy rains.

Piece-goods, European.—The decrease was principally in despatches from Howrah to stations on the North-West and the Punjab, and may be ascribed to the high prices ruling there for food-grains.

Indigo.—Succeeding a larger increase in November as compared with November 1886.

Turmeric.—Due to absence of demand.

Other fibres, raw.—Due to lesser demand in the Calcutta market.

Fruits, other kinds.—There was an increase in weight carried attended with a decrease in earnings; the former was due to short lead traffic in myrabolams from stations on the Jubbulpore line to Bombay, and the latter to the falling off in betel-nut traffic from Howrah.

Wheat.—This decrease is in continuation of those shown in all the previous months of the half-year, and is due to want of stocks.

Brass and copper.—Due to rise in the price of copper, owing to the French speculation.

Salt.—The decrease was chiefly in the despatches from Howrah.

Tobacco.—Due to ordinary fluctuation of trade.

N. St.L. CARTER, *Traffic Manager.*

TRAFFIC MANAGER'S OFFICE, JAMALPUR, *the 9th February* 1888.

Weekly Return of Traffic Receipts on Indian Railways.

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 *and* 25 *Vic., Cap.* 67.

The Council met at the Council Chamber on Saturday, the 11th February, 1888, at 11 A.M.

Present:

The HON SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding*.
The HON. G. C. PAUL, C.I.E., Advocate-General of Bengal.
The HON. H. J. REYNOLDS, C.S.I.
The HON. C. P. L. MACAULAY, C.I.E.
The HON. T. T. ALLEN.
The HON. SIR HENRY HARRISON, KT.
The HON. SIR ALFRED CROFT, K.C.I.E.
The HON. MOULVIE ABDUL JUBBAR.
The HON. G. IRVING.
The HON. BABU KALI NATH MITTER.
The HON. DR. MAHENDRA LAL SIRCAR, C.I.E.
The HON. C. H. MOORE.
The HON. DR. GOOROO DAS BANERJEE.

CALCUTTA AND SUBURBAN MUNICIPALITIES AMALGAMATION BILL.

THE HON. SIR HENRY HARRISON moved that the clauses of Chapter II, Part I, of the Bill to consolidate and amend the law relating to the municipal affairs of the Town and Suburbs of Calcutta be further considered for settlement in the form recommended by the Select Committee.

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that in line 2 of section 9, for the words "*(e)* or *(f)*" the words "or *(e)*" be substituted.

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that in line 1 of the fifth paragraph of section 9, for the words "a person qualified under clauses *(a)*, *(e)* or *(f)*" the words "a person claiming to vote under clauses *(a)* or *(e)*" be substituted. He explained that this was a verbal alteration, the only difference being the substitution of the words "claiming to vote" for "qualified."

The motion was put to the vote and carried.

The HON. BABU KALI NATH MITTER moved that section 10 be omitted. He said:—This is an innovation introduced by the Select Committee. It was not in the Bill as it had been passed by the Committee on the former occasion. In his speech in Council on the 7th January last, Sir Henry Harrison by way of justification for this novel measure said:—

"It seemed to have been left out of sight altogether, he did not say by all persons, but by many, and he could cite several of the reports which had been addressed to this Council in illustration of this, that there was a middle course which widely differed in principle from this allegiance to majorities, viz., that it was advisable and expedient in the highest sense, in the cause of good government, that these classes and persons in the town who were most fitted to understand its interests and guide its administration wisely, should be associated together in that administration, and that, as these classes knew best who understood their views and their wants, they should not have representatives chosen for them by the Government, but should elect their own representatives as Commissioners. This principle held up fitness and not numbers as the final test, and nomination was expressly maintained side by side with election on purpose to secure a proper voice to the classes who possessed fitness without numbers. He himself had no doubt, and he thought that most of those he was addressing would agree, that this was the truer interpretation of the intention of the Legislature in introducing the elective system, and at any rate it was the only sound principle which could be applied to the government of a city like Calcutta. This was the view of the electoral system which he had consistently held from the time he had had any voice in the government of Calcutta, and he had observed that it led to continual misrepresentation of his views on one side or the other. If he said anything or wrote anything deprecating the divine right of majorities, he was accused of backsliding and of advocating official absolutism. If he said anything in praise of the good work done by the elected representatives, it was at once assumed that he was desirous of seeing democratic institutions introduced into India, or at least into Calcutta. Now the question of the plural vote did seem to him to have some bearing on this very important principle. We naturally took the English electoral system as our model, and there we found two systems working in local bodies: the system of one-man-one-vote and the plural vote. If anything, the plural vote seemed the more favoured, but in boroughs the one-man-one-vote system was the law."

This change was made owing to the representation made by the Trades' Association. They object to the plural vote as it exists at present, on the ground that certain classes of persons get an advantage which they should not derive, and they suggested that the system of allowing the plural vote as it exists should be disallowed. On that suggestion the Select Committee thought fit to introduce this section in the Bill. It seems that if the present system of plural voting is objectionable, the mode of remedying it should be to abolish it, and not to allow different classes of the community still further power of plural voting. In all the elections of Town Councillors in English cities and boroughs, this system was not followed; the system of one-man-one-vote was rigidly adhered to. It was at parochial elections that plural voting was allowed, but such elections were different from those of Town Councillors, and were not so important. That being so, it seems to me that it would be infinitely better to take our precedent from the rules regulating elections in large towns and not from those which prevail in parishes. It is obvious that if the system proposed in the Bill be adopted, one of the principal communities in Calcutta would suffer very much—I mean the Mahomedan

community. In the first place they will suffer because the small number of Commissioners hitherto returned by them will be reduced by two, inasmuch as only two Commissioners will be allowed to each ward, instead of as at present three to some, which enabled them to return in each of the two latter wards one Commissioner from their body; and secondly, they will suffer, inasmuch as being a comparatively poor community they will not have the advantage of plural votes. It is a singular fact that all the Mahomedan Associations have unanimously objected to the system of plural voting, and entered their protest against it. The Mahomedan Commissioners have also in a body objected to it. In paragraph 4 of their representation they say:—

"We now come to the most important sections—we mean sections 10. 11, and 12—which provide for plurality of votes. It is a well-known fact that of all the three sections of the community, the Mahomedans are the poorest, their proportion to Hindus as regards landed property is concerned is not even 1 to 200; while their proportion to Christians as regards income is not even 1 to 100; such being the case, the result of these sections cannot but be most prejudicial to Mahomedan interests. It is stated that it has been the rule in England to recognise plurality of votes in measures of local self-government, and in support of their contention, the Select Committee have cited three Acts passed in different years. But we have learnt (*vide* Hon. Kali Nath Mitter's speech at the Municipal meeting of the 21st) that there is no town or borough in the whole of England enjoying the privilege of electing Town Councillors where the system of plurality of votes is allowed."

and they conclude by saying:—

"It is true that the plural vote has hitherto been exercised in Calcutta. Members of Hindu and Mahomedan families had the privilege of voting separately, but so had the Europeans, each member of a firm or each of the occupiers of a house, if he paid proportionately Rs. 25, was entitled to vote separately."

Then they have given a tabular statement, showing that, if the plural vote is allowed, they will suffer as well as the Europeans. How far that is a correct description of what is likely to happen I leave the hon. member in charge of the Bill to say. There can be no doubt that the adoption of the proposed measure will injure the prospects of the Mahomedans, and it may also injure the prospects of the Christian inhabitants of the town. I have not gone through the statistics with that amount of care necessary to be able to say whether that will be the inevitable result, but I have no doubt the hon. member in charge of the Bill will be able to enlighten us on the subject. So far, however, as the Mahomedans are concerned there is no difference of opinion. Now let us see what the Hindus say. The Indian Association in their representation of the 26th January say:—

"The Committee would beg to record their humble but emphatic protest against the principle of plurality of votes which has been recognised in sections 10 and 11 of the Bill. These proposals, the Committee submit, are distinctly retrogressive in their scope, and they will serve to perpetuate invidious distinctions between voters. They cannot fail to concentrate enormous influence in determining the elections in the hands of a few wealthy families and mercantile firms. The Committee are not altogether without apprehension of particular wards being converted into pocket-boroughs by the operation of those clauses. Further, the clauses will operate with special hardship upon the Mahomedan community, the members of which are not generally wealthy, and for the most part live in houses that are not heavily rated. The Committee would in this connection refer to the provisions of the Mofussil Municipal Act to which some attention should be paid, as it is now proposed to incorporate a Mofussil Municipality. Under the Mofussil Municipal Act the one-man-one-vote principle prevails to such an extent that within the limits of the same Municipality a voter is not even allowed to have votes for different wards though he may have property in them. And the Committee submit that it is a salutary principle, as it prevents particular families and special interests from acquiring that preponderance in the Municipality which would be fatal to the interests of local self-government."

The Indian Association, it is well known, represent the middle classes of the people, who will not be benefited by this system to the extent that they will be injured. Therefore their representation will not necessarily attract that amount of sympathy from the Council as that from another body who will mostly be benefited by this provision, and who are yet strenuously opposed to it. It is a fact impossible to deny that of all persons in the town the members of the British Indian Association will be mostly benefited by the plural vote, inasmuch as they represent the landed proprietors of the town, and necessarily will have a larger number of votes given to them. They say:—

"The Select Committee urge that if the one-man-one-vote principle is adopted, 'it is certain that as the poorer rate-payers, who will everywhere be the majority, learn to use

their power, the status of those who present themselves for election will gradually but inevitably decline; while if wealth is given its due weight, better and more influential persons will be willing to offer themselves for election.' The Committee of the Association regret very much that they cannot subscribe to such a doctrine. If it were sound, the best course to follow would be to limit the franchise to the wealthy alone by raising the limit of qualification to a sum far higher than Rs. 25. The Parliamentary franchise has been gradually extended to include less wealthy classes than before, but it may be allowed that the status of members of the House of Commons has not suffered by the change. The qualification of a candidate in the Bill has been reduced to half of what it is under the law in force. If the status of the candidates was at all in question, the limit assigned to the qualification should have been raised, not lowered.

"The Select Committee ask: 'Are all rate-payers, who contribute up to a certain minimum, to be placed on an equal footing, or are those who contribute most, and who, in the great majority of cases, are better qualified to judge of the needs of the Town, to have a more influential voice?' The last question involves a solecism. It can hardly be maintained that the ranks of those who pay most alone include persons who are qualified to judge of the needs of the Town; they may as well be found among those who pay least. The Committee would prefer to have, in the election of a candidate, the opinion of all such persons, whether found among the most or the least paying, and are unhesitatingly in favour of placing all rate-payers possessing the franchise on an equal footing."

Of the whole number of representations which have been received on this subject, all are in favour of this principle, except the Calcutta Trades' Association, which is not very much in favour of it, though it has accepted it. In their letter, dated 24th January, they say in paragraph 7:—

"The Committee have given their best attention to the provisions of sections 10 and 11, and are prepared to accept them as an improvement on the legislation hitherto proposed on this all-important matter. They cannot, however, but consider that too much weight is being still accorded to the owners of property at the expense of the tenants, and are of opinion that the scale for additional votes under section 10 should be reduced."

That is the only body, so far as the public is concerned, which is in favour of the system, whereas the representations of all other bodies are against it. Now as to whether it is a retrograde movement or not. Our predecessors in 1876 thought fit not to sanction anything of this kind, but they went so far as to object to the plural vote as it exists at present. At one period they were decidedly opposed to giving separate votes to individuals who possessed property in different wards, but ultimately, on the motion of the late Hon. Kristodas Pal, the Council was pleased to sanction plural voting as it now exists. The privilege, however, was of such a limited character that it would not justify the Council now to enlarge it, but rather, considering the objections against it, it would be necessary to curtail it. Finding so many persons opposed to the system of plural voting, I am not prepared to agree to such an innovation in the law.

The Hon. Moulvie Abdul Jubbar in supporting the motion said:—It does great credit to the hon. member to ask for the omission of section 10, and thus to plead the cause of the poorer classes of tax-payers. This section would not so much affect the interests of the community to which he belongs, but it affects seriously the interests of my poorer fellow-subjects, the Mahomedans. The principle of plurality of votes will not prejudice the Hindu rate-payers; but, as already observed by the hon. member, it will lay the axe to the root of the election of Mahomedans. If the new sections 10 and 11 of the Bill are not expunged, it will make the cause of the Mahomedans worse than it is; their return at the general elections will depend entirely on the suffrages of the Hindu electors.

The Hon. Dr. Gooroo Das Banerjee said:—I also support this amendment, which is in fact also an amendment of my own, and the object of which is to omit the provisions in the Bill relating to the scheme of plural voting. I do not contend that the principle of one-man-one-vote is always a perfect principle. But I oppose the scheme of the Bill—*first*, because it is not based on any sound principle or sufficient precedent; *secondly*, because it is not required to remove any inequality or injustice; *thirdly*, because it would be a source of evil in itself. And I adhere to the existing scheme, because under present circumstances the balance of convenience is greatly in favour of it. As the question involved is a very important one of principle, I beg leave to submit my reasons for it. Now the principle on which the scheme of the Bill is based is stated by the Select Committee to consist in "recognising the right of those

who contribute most to the maintenance of the Corporation to a more potent voice in electing the governing body." That would be justifiable only if it were true that all rate-payers had votes, and the duties of Municipal Commissioners consisted only in the application of the municipal funds, so as to give to the different classes of the rate-payers advantages proportional to their contributions. Let us see how far these assumptions are correct. Of course, if every rate-payer had a vote, then as the poor would always outnumber the richer classes, the latter might fairly claim the privilege of plural votes to restore the balance; but when, as is the case, the poorer classes who form the great majority of the rate-payers and pay small sums individually, but a large sum in the aggregate, are altogether precluded from voting, any scheme of plural voting for the rich, instead of restoring the equilibrium of interests, will have the effect of disturbing it most seriously to the prejudice of the lower ranks of the electoral body. Indeed, at one time, I had a mind to give notice of an alternative amendment to the effect that a scheme of multiple votes for the higher ranks of the electoral body ought to be supplemented by another scheme of sub-multiple votes for the lower ranks, so that two, three or more of the smaller voters might count as one. But I gave up the idea, not only with the view of avoiding complications, but because I am convinced that the pecuniary value of rates paid is no real indication of the qualification of the voter, but only an indirect test of a certain degree of intelligence, the really necessary qualification which cannot be directly tested in any other way. Now let us examine the other assumption and see how far it is correct. If the duties of Municipal Commissioners were like those of the Directors of Joint Stock Companies, and consisted merely in applying the funds to the greatest advantage of the different contributors in proportion to their contributions, then one might understand the propriety of giving to the rate-payers votes in proportion to the rates they pay. But the duties of Municipal Commissioners are really of a very different nature. It is true that they have to spend municipal funds for municipal improvements, though I may observe in passing that if the plan which has been recently adopted in connection with the opening out of a certain road were to meet with general favour, improvements could be effected without any cost but rather at a profit to the Corporation. But let that pass. Municipal Commissioners in spending the funds of the municipality for effecting improvements for the benefit of the rate-payers should have regard more to the magnitude of the wants of the rate-payers than to the magnitude of their contributions. This is their plain duty: to do anything else would be a gross dereliction of duty. On this ground no case can be made out. But this is not all. Besides spending money and doing other acts affecting the property of the rate-payers' Municipal Commissioners have other far more important duties to discharge which concern the convenience, the comfort, and the health of the rate-payers, and these are matters in which I submit the poor have from the very helplessness of their condition much greater interests at stake than the rich. Therefore I submit it is not easy to understand how on principle it can be maintained those who contribute more largely ought to have a greater voice in the election of the governing body. And mark the extremely artificial and unsymmetrical character of the scheme proposed. While the unit vote corresponds to a certain annual value of the property of the rate payer, double, treble and other multiple votes do not rise in proportion to the increase in that annual value. and the scale stops suddenly with the additional tenth vote given. For aught one knows there is no reason why it should not go on multiplying up to, say, the fifteenth, or why it should not stop at the fifth. I do not wish to be hypercritical, but I submit that the burden lies heavily on those who propose an artificial scheme like this in supersession of the natural scheme of one-man-one-vote, to make out not only the general fitness of the scheme, but to establish every matter of detail it involves. For by stopping short at any one point, we may be unwittingly giving an advantage to one section of the community at the expense of another. Were the scale to stop at 15 or at 5, it might have had just the opposite effect. So much for the principle of the scheme.

Now let us examine how far it is supported by precedent. The English Statute Book has been referred to, and the Public Health Act of 1875 has been cited as a precedent. My hon. friend, the mover of the amendment, has already pointed out to the Council that the Public Health Act applies to small

parishes and unions, but without taking any notice of that, and without saying anything as to the difference in condition of the two countries, it will be sufficient to observe that if the Public Health Act of 1875 furnishes a precedent in favour of the proposed scheme, the English Municipal Corporations Act of 1882, which is a later enactment, supports quite a contrary view, and is decidedly in favour of the principle of one-man-one-vote. Then as regards the Calcutta practice, the instance which has been referred to of members of joint Hindu families voting is, I submit, no instance of plural votes. When a joint Hindu family or a joint Mahomedan family pays a certain rate or tax, the payment of that tax or rate is a sufficient test of the status of the family and of the possession by the members of that family of the requisite degree of intelligence. It also proves that they own property in the municipality. And these conditions being satisfied, there is nothing wrong in the individual members of that family being allowed separate votes. Nor even is the fact of the same individual having votes in different wards an instance in point. Each ward constitutes a distinct electoral unit, and if a man is qualified to take part in the election of each of these units, there is no reason why he should not be allowed to do so. So much for the principle and precedents upon which the scheme is based.

A scheme so little supported by principle or precedent should require the strongest grounds of necessity for its justification. But the only ground of necessity which has been brought forward, either in the report of the Select Committee or in the speech of the hon. member in charge of the Bill, consists in this, that wealthy and influential voters will not be induced to take part in the elections, unless you raise the importance of their votes, and that unless they take part in the elections, the status of candidates for election will decline. I should be most reluctant to accept this view as correct. Indeed the former of these two propositions reads almost like a libel against wealth and influence. But if this view is correct, with all my respect for wealth and influence, I feel bound to say that the wealthy and influential voter who requires the not very creditable stimulus of personal vanity to induce him to take part in the elections, is not likely to raise the tone of the elections very much. The truth, however, is, as I imagine, that the rich and influential keep aloof from these elections out of mere indifference, induced by a confidence, generally well founded, that their interests are not likely to be neglected, whatever the results of the elections may be. They further know and feel, and we should also bear that in mind, that even where their interests are neglected, the consequences of such neglect to them will not probably be so injurious as in the case of others. These then are the real explanations why, comparatively speaking, the poorer rate-payers, the educated middle classes, take such a lively interest in the elections, while the rich and influential keep aloof. But we should also bear in mind that whenever the rich and influential condescend to take part in the elections, their position and influence always exact for them such deference to their views from numerous bodies of tax-payers within the range of their influence—and all this without any coercion or undue influence exercised on the part of any body—that they really enjoy the privilege of having many more votes than one: so that in the self-adjusting economy of nature wealth and influence have all that they deserve without our aiding them with any artificial scheme like this. I would also advert to the letter of the British Indian Association. That Association represents the wealth and influence of the native community; and by opposing this scheme, it has not only borne ample testimony to the healthy influence exerted by the educated middle classes in this matter, but has furnished the strongest evidence against any necessity for the proposed change.

Lastly, I submit that the scheme proposed will be productive of evil. It will, to say the least, mar the growing popularity of our municipal institutions. I beg leave here to refer to the words of a great English thinker, who has written on the subject:—"I do not deny," says John Stuart Mill, "that property is a kind of test; education in most countries, though anything but proportional to riches, is on the average better in the richer half of society than in the poorer. But the criterion is so imperfect; accident has so much more to do than merit with enabling men to rise in the world; and it is so impossible for any one by acquiring any amount of instruction to make sure

of the corresponding rise in station, that this foundation of electoral privilege is always, and will continue to be, supremely odious. To connect plurality of votes with any pecuniary qualification would be not only objectionable in itself, but a sure mode of discrediting the principle, and making its permanent maintenance impracticable" And if this is true in England, where wealth and intelligence have had sufficient time to adjust themselves to one another, it must be still more true in this country, where honorable poverty and indigenous Oriental learning have ever gone hand-in-hand where proverbially Lakshmi and Swaraswati, the goddesses of wealth and intelligence, are in perpetual discord, and where Western education, which may not underrate wealth so much, is an exotic plant of but recent importation. Considering the poverty of the people for whom these elections are meant; considering that we are about to extend the limits of our municipality suddenly and to increase taxation over a large additional area inhabited by a poor population; considering also that our municipal administration has to interfere constantly and minutely with the daily life of a heterogeneous body of rate-payers—considering all these things, I do submit that it is desirable, for every imaginable reason, that the popular element in the electoral body should have the preponderance. This is the only way in which we can secure popular confidence and disarm popular opposition. Measures of municipal improvement very often involve the certainty of present inconvenience and hardship, with perhaps but a doubtful chance of future good. And men of advanced ideas, who have been styled the party of progress—I say it in no disparagement of them—are apt often to be led away by enthusiasm to force their measures of reform without due regard to the capacity of the people. In such cases, unless their measures are leavened largely with the element of goodness and sympathy for the people, which can be secured only by having the popular element present in a large degree, their measures are sure to prove distasteful and oppressive. It is therefore in the true interests of progress that I would oppose this scheme, which would earn for municipal government the not very enviable name of oligarchy of wealth.

The Hon. Sir Henry Harrison said:—The objections which have been raised to the plural vote are partly that it has been vehemently opposed by the leading Associations and the outside public, and partly that it is a novelty and not sufficiently supported by precedent. I attach much more importance to the second of these objections than to the first. If it is true that this is a practical novelty, and also that it is not supported by the precedent of local self-government in England, I shall be much less sanguine of the propriety of introducing it than I am. I understand that we are now discussing the principle of plural voting and not the details. I am much surprised that no hon. member has suggested any alterations in matters of detail, because I am far from sanguine that the details of the Bill in respect of plural votes are the best that can be devised. But in voting on the principle of plural votes, we should not allow questions of detail to influence us in its consideration. The proper way to meet objections as to details would be to suggest modifications in those details; and therefore, until such modifications are proposed, it should be remembered that we are discussing the question of principle only, and all who support the principle ought to vote for it even though they may differ as regards details. The plural vote, as has been pointed out in the report of the Select Committee, has been exercised in Calcutta substantially from the outset. The provision by which everybody who has paid Rs. 25 is entitled to vote could be worked in such a way that all the members of a joint Hindu family could vote, and as a matter of fact in a considerable portion of the town the plural vote has been exercised to a very large extent. It really has been the case that in some instances a constituency has been almost swamped by one or two rich houses. I therefore thought it necessary to introduce some check, and therefore the check was to limit the plural vote to six members of a family. Up to that stage not a word of objection was raised by the public against the plural vote. That practice has prevailed for four elections in succession. Next, the exercise of the plural vote was enlarged in the Bill so as to include to the same extent Europeans in association as partners Still no objection was heard. Eventually the first objection came from the Trades' Association, which in an extremely intelligent and well-considered representation pointed out

that to some extent the plural vote even as modified handicapped Europeans; and I then suggested that we should not abandon the principle that paying higher taxation should give higher representation, but should make it absolutely equal for all communities, and make it more intelligible by making it an undisguised plural vote. As the Europeans on the average pay higher rates this evidently tended in their favour, and as soon as this was done, the proposal was received with a chorus of disapprobation from all the Native Associations Not only from the Mahomedans, against whom the principle would tell most severely, did objections come, but from a community who ought not in principle to object, and who would scarcely, if at all, lose by it. I think this fact is very suggestive indeed. I will return to this hereafter. Now as regards the question of novelty, how far can it be supported by English precedent? I say that it has overwhelming precedent in favor of it. It is perfectly true that in the elections of Town Councils in England the principle of one-man-one-vote obtains, but the boroughs have been at all times the stronghold of English democratic feeling from which the liberal party has drawn its chief support; but my hon. friend overlooks the fact that that system was as widely different from the system in Calcutta as possible. The first principle of that system was that an owner was not allowed a vote *quâ* his ownership. Are those who object to the system of plural voting prepared to adopt that principle as well? If they wish to take English towns as their model, they should be prepared to follow the example in its entirety. But the Parliamentary boroughs excepted, at every step of English legislation you will find the plural system introduced. The primary unit was the parish where the plural vote was allowed not only at elections, but actually in voting on measures. The most important unit of local self-government in England is that of the unions in which parishes are united into unions, which dispose of more taxation than any other body. Unions have always been governed by a mixed body consisting partly of *ex-officio* members, namely, the Justices of the Peace, and partly of guardians elected by the system of plural voting. When highway guardians were constituted, there again the principle of plural voting was adopted. So again when the Commissioners of Sewers and Burial Boards were appointed, they were elected by the system of plural voting Then came the Local Government Boards for the improvement of sanitation, and here also you have the same system of plural voting up to a maximum of six votes. In 1870 a Select Committee was appointed by the House of Commons to consider the system of local taxation. This Committee was under the Chairmanship of Mr. Goschen. The report of this Committee was, I believe, the last authoritative report issued on this subject. The system of voting was specially examined into by them, and the Committee refused to condemn the plural system though specially asked to condemn it by the Chairman. On the other hand they did report unfavourably of the borough system of voting by which owners were excluded. Five years after this report was sent in, we had the all-important Public Health Act of 1875. I listened to my hon. friend with great care when he referred to that Act, and I thought it very extraordinary that he should refer to it, as it was so entirely against him, but he passed it over lightly, and went on to the Municipal Act, 1882, which was simply a consolidating Act. That Act recognised the system which had always prevailed in towns of the one-man-one-vote principle, and nothing more. But the Public Health Act of 1875 was a fundamentally construction Act. By it the whole kingdom was divided into 985 urban sanitary districts with a population of 14 millions, and 575 rural sanitary districts with a population of 8½ millions; and in these urban sanitary districts Local Boards were elected by plural voting, the maximum being six times the minimum. These urban sanitary districts in a great many instances included boroughs, and the Local Boards exactly adopted the recommendation of the Committee of 1870. So here is an Act thirteen years old—an Act passed after a Parliamentary Committee had reported on the subject, we had this principle adopted for the whole country; and if we are to follow English precedent, I cannot see how it can be said that the plural vote is a novelty or without sufficient precedent.

That being so, let us turn to the principle itself. At first sight it commends itself to the most ordinary intelligence. Taxation or the payment of rates is

the basis of representation, and it naturally follows that the higher the taxation, the higher should be the share in the representation. We know that in certain countries and for certain reasons that system is condemned. Mr. John Stuart Mill is only one of many radical writers who could be referred to to prove that in the advanced democratic stage that principle is objected to; but India is not in an advanced democratic stage Therefore, if we in India allow representation in return for taxation, why should we say that a person who pays higher taxation should have only the same vote as a person who pays much less? The objection to plural voting is taken by two sections of the community; by the Musulmans who naturally object, as they are the poorest rate-payers; but they will not loose relatively to what the state of things was before. In the case of the Hindu tax-payers, the plural vote is already exercised. No person would suppose that naturally the Hindu voters in the town would be eight times as much as the Mahomedans, and yet, except in the last elections, it has been much more. But no doubt the Mahomedans will lose the position which they would occupy under the one-man-one-vote system, if the principle of the plural vote is adopted, and I shall very much regret it. That is one of the details which I regret as the result of the system, but I cannot admit that because one community is poorer than another, a system of such extreme importance should be thrown over. Then when we come to the Hindus, I think the strength of their opposition is in inverse proportion to the force of the arguments adduced to justify it. To make his position strong, my hon. friend was obliged to pose as the champion of the Mahomedan interest. The moment he passed to the objections of his own community, his arguments grew weak. We find the opposition as unanimous as possible amongst their public bodies, but the reasons for that opposition are to be sought for anywhere than in the arguments ostensibly advanced. This is due to one of two causes. The Hindus in their own wards most unquestionably will not lose as a body by the plural vote: the only question will be as to the number of votes they can give in the other wards? Is their opposition then due to their desire to influence more potently the elections in the European wards—the Chowringhee and Theatre road wards. I do not believe it is so. I believe they will be perfectly satisfied to see Europeans have the representation of their own wards. I feel no doubt that the secret of their opposition is that they see in the plural vote a principle which makes something besides bare numbers the basis of representation, and that is precisely the very reason why I press the Council to adopt the principle of plural voting. The Council has heard an extract from the report of the British Indian Association read, but I have had a letter sent to me by a gentleman well known to the Council, himself an ornament to the High Court from which he has retired, and also once a member of this Council—I mean Babu Mohiny Mohun Roy. The letter is addressed to the Council, but I have his leave to read it in the first instance.

"I request you will be so good as to lay before the Legislative Council the following remarks and suggestions which I beg to offer on the provisions for plural votes contained in the amended Municipal Bill:—

I. The principle of plural votes has my hearty approval. It has caused me some surprise and regret to find that Associations which represent very conflicting interests, and which seldom agree in anything, have rushed in to oppose a principle so just and equitable. 'When they do agree, their unanimity is wonderful.' My legal experience has taught me, however, that judgments from which both the contending parties appeal are rarely wrong.

II. The rule of one-man-one-vote is founded upon socialistic notions and is wholly foreign to Hindu ideas. Where the elective franchise is high, the rule may be worked without much manifest disadvantage. But its practical disadvantages come prominently into view where the franchise is low. There the masses completely swamp the classes and carry the elections, and are themselves carried by artifices and electioneering tactics which no one would wish to see take root as an institution in India, but which are fast growing with the growth of the elective system in our municipalities.

III. You can cure this growing evil in either of the two following ways:—By raising the elective franchise, or by making such an equitable distribution of the votes as to give a larger voice at the elections to those who bear a larger share of the burden of municipal taxation. The first is objectionable, in that it will altogether disfranchise a large number of persons. The second, which is no other than the scheme of plural votes, recommends itself at once to our minds as the right remedy. It will not disfranchise any body, but it will effect a cure by a much milder treatment, viz. by lowering the value of each vote. The depreciated value will be the ratio between the number of present votes (n), and the

same (n) *plus* the additional votes (m) which will be given to plural voters. The Algebraic expression for the depreciation will be as follows :—

$$\text{Depreciation} = 1 - \frac{n}{n+m} = \frac{m}{n+m}.$$

IV. I have no data for making the calculation. But I am certain that the additional votes will never come up to anything like the present votes. There is, therefore, no ground whatever for supposing that the plural voters will have it all their own way, and the objections founded upon such fine phrases as plutocracy and oligarchy will necessarily lose some of their force. I am only afraid that the scheme, with the proposed limit of six additional votes, will be inadequate to give the plural voters—that is, persons of wealth, position and respectability—such a potent voice at the elections as may be desirable in the best interests of municipal administration.

V. I have always held a very strong opinion in favour of plural votes. After the Committee of the British Indian Association had sent in its communication, I saw several leading members of the Association, and they agreed with me that it was a very good principle and one quite in unison with Hindu ideas and feelings. Outside of the many Associations with which Calcutta is blessed, I saw several native gentlemen of education and position, and explained to them the principle of plural votes. They felt surprised that any possible objection could be made to it."

The letter then contains a suggestion which I need not take up your time by reading I read this letter not so much on account of the weight due to the writer's opinion, but on account of the clear and forcible manner in which he has explained the principle which I am anxious to introduce into the representation of this town. We cannot raise the elective franchise without disfranchising a great many persons who now exercise it. We have gone low enough, but do not go lower still. But we endeavour to reclaim their fair and legitimate influence to the more wealthy persons and those who pay a larger share of taxation by the system of plural voting. It is all very well to say that as the lower classes have no votes you must maintain the principle of one-man-one-vote as a kind of average counterpoise. I protest altogether against putting the whole power into the hands of the middle classes as we find them in Calcutta. Poor men of light and learning are by no means the representatives of gharrymen and hackney carriage owners, of petty shopkeepers and men of the labouring classes. I therefore strongly press the plural vote on your acceptance, for what I am sure is the very reason that the Hindu Associations oppose it, viz., that it asserts the principle that Calcutta is a city in which wealth and intelligence, and not numbers only, should be entrusted with power.

Lastly, there is a point of very great practical importance which has not been touched upon, and that is that we are introducing the system of polling with the object of purifying the elections. So far as polling is concerned, it has been truly pointed out that it will operate in a way which will be regrettable, namely, that a great number of the more influential will abstain from voting. But I am sanguine that if the principle of plural voting is carried it will go far to correct that. When it is known that a person can give ten votes, pressure will be put upon him, and he will sacrifice a little time to give his votes. But when he knows that his vote is simply a unit, that its effect will be cancelled by the very next man who pays a rate of Rs. 25 and goes to the poll, it will be a strong temptation to him to say that he cannot afford the time, and that he does not care to give his vote.

On these grounds, I shall be sorry if the Council does not see its way to adopt the system of plural voting.

The Hon. Sir Alfred Croft said:—The hon. member who has just sat down suggested in the beginning of his speech a means of escape from what I felt to be a position of considerable difficulty. He suggested that those in favour of the principle of plural voting should vote against the present amendment, but should afterwards propose any modification as to details which they thought desirable. I may state at once that I am in favour of the principle of plural voting for reasons with which, after the speech of the last speaker, I will not trouble the Council. I agree, as I said on a previous occasion, that the principle which should govern the electoral qualification is the having a pecuniary stake in the town, and the greater the stake the higher the qualification; but that is just the reason why the provisions of sections 10 and 11, when compared with one another, seems to me to be inequitable. The scales in these two sections, for owner and for occupier, respectively, are precisely the same, but because they are the same, they produce

an inequality of a serious character. The difference between that stake in the town which the owner has and which the occupier has, in respect of property of the same value, seems to me to be very great; and I cannot avoid the conclusion that by these two sections the owner of property gets far more than his position entitles him to. To narrow the point, I will compare one additional vote given in section 10 on an annual rating of Rs. 600, with one additional vote given in section 11 on the same rating. Is it possible to say that the owner of a house rated at Rs. 600 is a person of the same wealth and position as the occupier of the same house? It seems to me that the occupier is in a far higher position. All we know about the two men is that one is the owner and the other the occupier. Therefore, so far as the terms of the section go, the owner has an income of Rs. 600 only, while the occupier must have an income of a great deal more, because he pays Rs. 600 for the mere rent of his house. In England it is commonly estimated that the rent a man pays for his house should be 10 per cent. of his income. In India it is probably higher; and if we put it at one-fourth or one-fifth, it will perhaps be nearer the point. On the principle to which I refer, the occupier of such a house would seem to occupy a position equivalent to that of the owner of a house rented at Rs. 2,400 or Rs. 3,000. I would therefore ask leave, while accepting the basis upon which section 10 is framed, to propose a modification of it, viz., that the left-hand column of section 10 should be multiplied by four throughout, so as to increase the ownership qualification. I suggest this merely by way of indication of what I mean, without binding myself for the moment to any particular scale. But assuming the scale I have named, the result would be that one additional vote, which in the case of an occupier would be given by the occupation of a house rated at Rs. 600, would in the case of an owner be given by the ownership of a house rated at Rs. 2,400.

The Hon. Babu Kali Nath Mitter said:—As the arguments for and against the principle of plural voting have been fully laid before the Council, I shall be as brief as possible in my reply. With reference to the complaint of the hon. member in charge of the Bill that this objection was not taken at an early stage, the answer is very clear, namely, that what the Select Committee at first did was to put into the law the existing state of things, and therefore nobody took any exception to it. If the hon. member thought the existing state of the law objectionable, it was his place to have taken the objection. Instead of that, he himself proposed what was first introduced, and it was adopted. There is this difference between what was then adopted and what is now proposed; whereas in the one case individuals had votes, in the other case the vote is given to property. That is the principal difference between the two cases, and the difference is of such importance that one must be struck at it. It is said that the members of joint Hindu families have hitherto exercised the right of plural voting. But in what way? They have to show that each of the members of the family pays a sufficient amount of rates to entitle him to vote: when they establish that fact, they are allowed to vote. But is the case precisely the same now? No; now the head of a family who pays large rates, instead of exercising a single vote, would have 10 or 12 votes; and therefore the difference is very great in principle. We are not legislating for parishes and unions, but for the metropolis of India, and therefore we should follow the principle adopted in large English towns, and not the principle followed in parochial elections. But my hon. friend prefers to follow the precedent of the small elections in parishes and unions, which are nothing more than a certain number of parishes added together. My hon. friend, as a sort of threat, asked whether owners are prepared to be dealt with precisely in the same way as the law deals with them in England, but he forgets one important thing, namely, that in England owners have not to pay rates. There owners do not pay rates, and therefore they do not vote. Here you make the owner pay rates, and yet you ask whether he is prepared to be dealt with in the same way as under the English practice. If the offer were made to owners to be relieved from the payment of rates if they would give up the privilege of voting, it is not very difficult to conceive what the answer would be. Therefore we must not be staggered with that argument; it has no bearing on the matter, and it does not in the least help my hon. friend. I would ask whether the Hindus, as a body, would lose by this provision. I say they would not,

and yet they unanimously object to it. Therefore my objection to this principle becomes very forcible, because it comes from a quarter which is likely not to be affected by it. My hon. friend says, if the Hindus will not lose by it, why then all this agitation? They object to it on the ground that it is a retrograde movement altogether. Then my hon. friend also points out that no notice was taken of the argument advanced by him on various occasions in support of this principle, that rich and influential people will much sooner go to the polling stations, if they had a number of votes to give and could thus largely influence the return, than if they had only a single vote, like any ordinary rate-payer. If that is so, then the remedy is this, that instead of compelling persons to go to the polling stations, the present practice of voting by means of voting papers should be maintained—it would be a mistake to raise the importance of any particular class of the community, simply because it is anticipated that persons representing it will not otherwise go to the poll. In the same way, to meet the objection of the Trades' Association you should disallow all plurality of votes, and not give plurality of votes to all classes. My hon. colleague must have noticed one of the amendments on the notice paper (No. 18), which runs thus—that "in the case of joint-owners the principal member shall be entitled to vote, and in the case of joint-occupiers the one who pays the largest share of rates, or in whose name the rates are paid. Should there be any dispute as to the person who would be entitled to vote amongst the joint-owners or joint-occupiers, the Chairman shall decide between the contending parties." From which it will be seen that I anticipated this objection, and am prepared to make this sacrifice on behalf of the rate-payers, by treating the large owners in the same way as other voters, though it should not be forgotten that in the case of elections of members of the House of Commons plurality of votes is allowed to persons having property in different districts. It is on this ground that plurality of votes is allowed under the present Municipal Act. As to allowing plurality of votes to joint-owners and occupiers in coming to construe the law, it was considered that as it enacted that whoever paid on his own behalf rates to the amount of Rs. 25, members of joint undivided families, who paid rates amounting to Rs. 25 per head, were entitled to vote. If that is a ground of complaint let it be removed; but it does seem to me that neither that complaint, nor the complaint that rich and influential persons will not go to the polling stations, are such as to justify our adopting plurality of votes.

The motion being put, the Council divided:—

Ayes 4.	*Noes* 9.
The Hon. Dr. Gooroo Das Banerjee.	The Hon. C. H. Moore.
The Hon. Dr. Mahendra Lal Sircar.	The Hon. G. Irving.
The Hon. Babu Kali Nath Mitter.	The Hon. Sir Alfred Croft.
The Hon. Moulvie Abdul Jubbar.	The Hon. Sir Henry Harrison.
	The Hon. T. T. Allen.
	The Hon. C. P. L. Macaulay.
	The Hon. H. J. Reynolds.
	The Hon. the Advocate-General.
	His Honor the President.

So the motion was negatived.

The Hon. Sir Alfred Croft said:—With the permission of the Council, I beg to move the following amendment:—

"That in the second clause of section 10, for the figures '600, 1,000, 1,500, 2,000, 2,500 3,000, 3,500, 4,000, 4,500, and 5,000,' the figures '1,000, 2,000, 3,000, 4,000, 5,000, 7,500, 10,000, 15,000, 25,000, and 50,000' respectively be substituted."

I will not detain the Council with more than a very few words in support of this amendment, because I have already stated the grounds upon which the principle involved in it is, in my opinion, reasonable and fair. There are only one or two points I wish to notice. It will be observed that instead of a simple multiple of four, which I suggested a few minutes ago, a sliding scale, ranging from Rs. 1,000 to Rs. 50,000, has been substituted. Next, it has been pointed out to me that there are two arguments which may be used against my proposition, and which certainly escaped me when I submitted it to the Council just now. The first is that the principle of equal electoral power in respect of ownership and occupation has already been accepted in section 8, under which

shall vote in the ward in which the person exercises his calling or carries on the business in respect of which the license is taken out." My hon. friend the mover of the amendment wants to extend that principle, and leave an option to the person as to whether he will vote in the ward in which he lives, or in the ward in which he carries on his business. That is a further extension of my own amendment, and I support it. But the real object of the amendment is this, that, if the proposal of the Select Committee is carried, a very large number of persons carrying on business in Ward No. 12 will not be able to vote in that ward. The whole of the barristers, pleaders, and attornies, who at present can vote in that ward, will be precluded from voting if this provision of the Bill is not altered. I think they are persons eminently qualified to select their representative, and I do not see why they should be deprived of the right of selection. In the report of the Select Committee, it is pointed out that in Ward No. 12 the resident voters suffer, because these outsiders elect one or two members by their numbers. As the Bill provides that each ward should return only two members, the resident members will return one, and probably the barristers, pleaders and attornies the other. A great deal of importance has been attached to the residential voters, but after the provision which has been passed by the Council allowing the Trades' Association to elect four members, they will be persons who will be most interested in Ward No. 12, and they will have another member elected under the general clause. I do not see why it is necessary to deprive this non-residential class of the right of voting in this ward for the benefit of the residential voters. If you do so, you will deprive a large number from voting at all. Suppose four persons living in Howrah carry on business in Calcutta; they will, under the Bill, have no vote at all; whereas if they are allowed to vote in the ward in which they carry on business, they will then be able to vote. I am told by the hon. mover of the Bill that residence in the town is meant, but the hon. and learned Advocate-General will no doubt tell the Council that there is a decision on the point. The question came up under the provisions of the Bankruptcy Law where the term used was "residing." A person living on the other side of Circular Road applied for the benefit of the Act, and the High Court held that carrying on business in Calcutta was sufficient residence to bring him within that section. And yet an amendment was thrown out the other day which provided that a person who carried on business in the town would be entitled to vote. It seems to me only right and proper not to deprive these persons of their right to vote.

The HON. THE ADVOCATE-GENERAL said:—The meaning of the expression "carrying on business," according to all the decisions, is that the person should have his place of business and pay rates. Section 8 allows him to do that, and it comes within the rule. But I never heard that a man is held to be resident in a place if he has not a place in respect of which he pays rates and taxes. The meaning of the term "resident" in section 8 is that they should be bodily or generally resident; and section 9 provides that "a person qualified under clause (*d*) shall vote in the ward in which his place of business is situated, otherwise in the place in which he resides." But we are now asked to introduce a third condition of voting, viz., that a person who has no place of business for which he pays taxes, but has an ambulatory business and is not resident in the town, should still be entitled to vote. With regard to what fell from my hon. friend Babu Kali Nath Mitter, I find it stated in Maxwell on Statutes that "in general a place of business will not be regarded as the place of voting."

The HON. SIR HENRY HARRISON said:—If this amendment is carried, the elections might be swamped even by clerks who come daily into town for the purpose of attending the public office in Ward No 12. The object of this section has been correctly stated by my hon. friend Babu Kali Nath Mitter, that the residents of Ward No. 12 may be able to elect the members of Ward No. 12. It is one of the wealthiest wards in the town. Wards 12 and 5 pay on the whole the largest amount of taxation. Ward No. 12, in which this Council Chamber is situated, is the ward in which the business of European firms is carried on more than in any other part of the town; therefore it is the part of the town in which European business ought to find its representatives. But owing to the way in which the section was worded before, the High Court being also situated in this

ward, representation was given not only to those who live in the ward or have large business houses and pay rates in it, but also to the barristers, attornies, and vakeels of the High Court, because they take out licenses of Rs. 50 annually and practice their profession in the Small Cause Court or the High Court. It will be quite sufficient to indicate the necessity of this section if I say that in the four elections since 1876, nine out of the twelve members elected in this the chief business ward of the town have been pleaders or attornies. I hardly think it necessary to put the facts stronger than to say that the residents of the ward could not do more than secure one member against the vote of the legal element. If it is in the new Corporation the wish of the Council that Ward No 12 should be represented by one legal member and one resident member, then this amendment ought to be passed; but if they think that the residents of the ward have a right to elect their own representatives, then I think the section as it stands is perfectly correct.

The motion was put to the vote and negatived.

The Hon. Mr. Irving said:—I have the honour to move that for section 18, the following be substituted:—

"Whenever an equal number of votes is given to two or more candidates at any election under this Act, the candidate for whom the greatest number of rate-payers have voted shall be held to be elected; and in case of an equality of votes in this respect, the Chairman shall give a casting vote, and the candidate to whom such vote is given shall be held to be elected."

It will, I think, be admitted that it is desirable to relieve the Chairman as far as possible from the often invidious and unpleasant task of giving a casting vote in order to decide the election of a candidate. The custom of England is, I understand, to elect the candidate for whom the greatest number of rate-payers have voted in case of an absolute equality of votes. In the highly improbable contingency of a dead-heat also occurring in the number of rate-payers voting for two candidates, the Chairman might then be called upon to give his casting vote.

The Hon. Sir Henry Harrison said:—I am willing to accept this amendment, but its importance is not great, because the Chairman of the Corporation has never yet had to give a casting vote. In France, when such a case occurs, the elder of the candidates is selected; in Bombay they cast lots. I understand the meaning of the amendment to be this, that if each candidate has 1,500 votes, then if in the one case 700 voters make up the 1,500 votes, and there were 600 voters on the other side, then the candidate for whom the greater number of persons voted would be declared to be elected. If that is the meaning I have no objection.

The Hon. Dr. Gooroo Das Banerjee supported the amendment on the ground that it would in theory at least be a good corrective of the scheme of plural votes.

The Hon. Mr. Reynolds said:—In the event of such a contingency happening, will there be any difficulty in ascertaining which candidate has the greatest number of supporters? In the case of there being 1,500 votes on each side, will there be any difficulty in ascertaining that 700 rate-payers voted for one candidate, and only 600 for the other?

The Hon. Sir Henry Harrison said:—That can easily be ascertained from the returns. I am glad to see that the objection to the plural vote has dwindled down to such a small compass that the objections to it would be corrected by so comparatively trifling an amendment as this.

The motion was put to the vote and carried.

The Council was adjourned to Saturday, the 18th February 1888.

Gordon Leith,

Offg. Asst. Secy. to the Govt. of Bengal,
Legislative Department.

Calcutta;
The 21st February, 1888.

the owner and occupier alike have each one vote if the property in respect of which the vote is given is of the value of Rs. 300 a year. That no doubt is a fair argument against the proposal; but I conceive that the practical importance of it is but small, and that the real importance of this principle comes in when the higher values are reached. The second argument is based on the fact that under the Municipal Act the owner and the occupier pay rates equally, and therefore are presumed to have an equal stake in the town. Still, even that I would not accept without some reservation; because it appears to me that the business done by the occupier of a house such as the Great Eastern Hotel, and the transactions that he carries on in respect of such occupation, are very much larger and more varied than those with which the owner of the house as such is concerned. I do not deny the force of those considerations, but I should still wish to submit the point to the decision of the Council.

The Hon. the Advocate General said:—I am very much surprised at this amendment, which seems to me to rest upon a principle unsound and unsubstantial. I understood the hon. member in charge of the Bill to say that the extension of the principle of plural voting arose from this, that it had hitherto been the practice to give additional votes in certain cases according to the amount of taxes paid by rate-payers, and on that the principle of regulating votes according to the amount of taxes paid recommended itself as a sound one. This Bill contains a provision that a consolidated amount of taxes is to be divided between the owner and occupier. Starting from that point of view, it is obvious that the occupier who occupies a house of the annual value of Rs. 600 should have the same number of votes as the owner of that house. The principle underlying plural votes, as disclosed by the Bill and maintained by the mover, is in direct conflict with the principle (if any) on which the amendment is rested. A strange proposition has been enunciated. The hon. mover of the amendment contends that a man who pays Rs. 600 annually for the house he occupies in this town must be necessarily considerably wealthier than the man who owns that house. I am not prepared to admit that proposition. I know a number of men who occupy houses at Rs. 300 per month or more who do not possess half the wealth of the owners of such houses, and it is only in regard to a house in which the occupier dwells the hon. member's contention can be supposed to make an approach to the startling proposition he desires to maintain; the moment it is assumed that the house occupied is used as a shop, boarding-house, or for any other purpose of trade, the asserted proposition falls to the ground. It is needless to say more on this subject, as it must be apparent the more the matter is probed the weaker it will become.

The Hon. Sir Henry Harrison said:—The Hon Sir Alfred Croft's proposal is, as the learned Advocate-General has pointed out, an extension of the principle of the plural vote, but I do not think it is a contradiction of it. Assuming that greater taxation should be recognised as a ground for higher representation, the argument comes nearly to this, that a person who pays the higher taxation is on the average more intelligent and understands municipal wants better than persons who pay a lower rate of taxation. Although it may be sometimes true that the occupier of a house of Rs. 5,000 may not be richer than the owner of that house, if the owner has ten such houses he will get votes for each such house in other wards. My own views are very divided as regards this amendment. I am satisfied with the Bill as it stands, and I do not think the owner will have any undue weight under it. In the Parliamentary Select Committee already referred to their efforts were entirely in the other direction; their fear was that the occupiers would outvote the owners; and they proposed as a distinct recommendation that the owners should vote separately from the occupiers and should have separate members. I have no objection to see my hon. friend Sir Alfred Croft's amendment adopted; but I regard it as a new development of the principle adopted by the Bill.

The Hon. Dr. Gooroo Das Banerjee said:—I will add my feeble voice to the forcible opposition of the hon. the Advocate-General against this somewhat strange and startling amendment. One could understand the principle that wealth contributed to the Municipality might be made the basis of representation. But that is not the amendment before the Council, and we find

not wealth contributed by the voter, but wealth possessed by him proposed as the basis of representation. Such a proposition nobody has yet heard of. It has been said that a man who pays a rent of Rs. 600 for a house is a richer man presumably than the man who owns the house. That may or may not be the case. The question was not whether a man was richer, but whether he contributed more to the Municipality. The hon. mover of the amendment has not been able to assert that the man who pays Rs. 600 as house-rent is necessarily more intelligent. Wealth may vary with the rates levied, but intelligence does not so vary. It may be that a man who pays Rs. 600 house-rent may have larger concerns to carry on, and for that purpose a greater interest in the affairs of the Municipality, but the hon. mover of the amendment forgets what is very evident, that a man who owns a house has a more abiding interest than the sojourner who comes here for the exercise of his profession, or his calling, and then leaves the country. Any municipal improvement which may be carried out has a permanent effect on the property of one man, but only a temporary effect as far as the other is concerned. From this point of view also, I submit that this amendment should not be supported.

The motion was put to the vote and negatived.

The HON. SIR HENRY HARRISON moved that for the first paragraph of section 10, the following be substituted—

"A person qualified to vote under clause (*b*) of section 8 may give two votes in each ward in which he is entitled to vote, or one vote if only one Commissioner is to be elected for that ward; as well as additional votes according to the following scale:—"

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that for the first paragraph of section 11, the following be substituted:—

"A person qualified to vote under clause (*c*) of section 8 may give two votes in each ward in which he is entitled to vote, or one vote if only one Commissioner is to be elected for that ward; as well as additional votes according to the following scale:—"

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that for the first paragraph of section 12, the following be substituted:—

"A person qualified to vote under clause (*d*) of section 8 may, if he holds a license under Class IV of the third schedule, give two votes, or one vote if only one Commissioner is to be elected for the ward in which he may be entitled to vote under this qualification; if he holds a license under Class III, one additional vote; if under Class II, two additional votes; if under Class I, three additional votes."

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that in line 2 of section 13, after the word "includes" the words "a Hindu joint family" be inserted; and that in line 3, after the word "or" the word "other" be inserted.

The motion was put to the vote and carried.

The HON. DR. GOOROO DAS BANERJEE moved that for the fourth paragraph of section 9, the following be substituted:—

"A person qualified under clause (*d*) of section 8 shall vote in the ward in which his place of business is situated, or in the ward in which he resides."

The object of this amendment, he said, was shortly this. A rate-payer possessing the necessary qualification by reason of his paying a license fee in respect of his business may reside in one ward, and have his place of business in another. Presumably, he is interested in the welfare of both the wards, and ought to be allowed to vote in either. Where his place of residence has more permanence or more importance, he would select that as the ward in which he would vote. There are other instances in which the reverse may be the case and the voter may prefer to vote in the ward in which he has his place of business. But in either case he is the best person to decide the affairs of which ward interest him most, and therefore he ought to have the right to choose the ward in which he will vote, instead of the Act fixing the ward for him. My amendment leaves him that option to the fullest extent, whereas the clause of the Bill does not. Therefore I submit that the amendment meets the requirements of the case better than the provision in the Bill.

The HON. BABU KALI NATH MITTER said:—The Bill, as originally passed by the Select Committee, contained this clause:—"A person qualified under clause (*d*)

ILLUSTRATION OF REPORTS BY MAPS.

REVENUE DEPARTMENT—MISCELLANEOUS.

Calcutta, the 8th February 1888.

RESOLUTION.*

READ—

A circular issued by the Government of India, Revenue and Agricultural Department, No. 64G, dated the 2nd November, 1882, containing a proposal to insert maps in administration and other reports to illustrate the questions discussed therein.

Read also—

Letter from the Government of India, Home Department, No. 22—749, dated the 26th May, 1883, with enclosure.

Resolution, dated the 10th June, 1884, issued by this Government to the Board of Revenue, Lower Provinces, and the Heads of Departments, calling upon them to consider how skeleton maps could best be utilised to show, by shades of colour or in other ways, such administrative features as might in their opinion be conveniently illustrated by means of maps.

Letter from the Sanitary Commissioner, Bengal, No. 3447R—A, dated the 28th June, 1884.

Letter from the Protector of Emigrants, No. 1925, dated the 6th December, 1882.

Letter from the Director of Public Instruction, Bengal, No. 5582, dated the 20th July, 1884.

Letter from the Director of the Department of Land Records and Agriculture, dated the 29th August, 1887.

Letter from the Board of Revenue, Lower Provinces, No. 361B, dated the 3rd May, 1887.

Letter from the Board of Revenue, Lower Provinces, No. 449A, dated the 28th June, 1887.

As far back as in 1882 the Government of India, in their Circular of the 2nd November of that year, quoted in the preamble, suggested the more general use in Administration Reports of illustrative maps corresponding in size with the pages of the reports themselves. The Survey Department, it was ascertained, were prepared to supply skeleton maps of the kind required, and the Board of Revenue and the Heads of Departments in these Provinces were requested to consider what features of the administration dealt with by them could best be indicated in the manner proposed.

2. The Lieutenant Governor considers that the object in view is a desirable one, and has determined to give immediate effect to the suggestion made by the Government of India. The replies of the Officers and Departments consulted are generally in favour of the proposal, but it has been urged by the Board of Revenue that it is calculated to occasion delay in the submission of reports and to entail considerable expense. With regard to the anticipated delay, the Lieutenant-Governor, however, is of opinion that, if the preparation of the maps be taken in hand with forethought, not when the reports which they concern are complete, but as soon as the statistics which they are designed to illustrate have been compiled, there will be no difficulty in submitting them in proper time, and it must be clearly understood that the dates hitherto prescribed for the submission of reports must continue to be adhered to. It may on occasion be found necessary to despatch the maps at a later period to be bound up with the reports, but this procedure should be entirely exceptional, and is to be avoided. In the matter of expense it must also be distinctly understood that no addition can be made to existing departmental grants on this account, and that whatever is done must be done within the limits of budget provision.

3. Sir Steuart Bayley does not desire to indicate once for all any stereotyped plan on which maps should be prepared, but must leave it to the Heads of Departments themselves freely to use their discretion in the matter, so as to illustrate by this means the special features of the particular branch of administration treated during the year under report. The person writing a report will generally be the best judge of the question what statistical information

* To be substituted for the Resolution published at pages 303—304 of the Supplement to the *Calcutta Gazette* of the 15th February 1888.

can on each occasion be embodied in maps with the greatest advantage. It may be observed that the Sanitary Commissioner proposes to indicate, by shades of colour or other appropriate devices, the extent to which operations have been carried on in different localities, the progress of disease, the intensity or persistency with which it has prevailed, the local circumstances which have influenced its prevalence and procedure, its effect on the population, and other cognate matters; while the Director of Public Instruction desires to show the general spread of education as tested by the proportion of scholars to population, the spread of secondary and higher education on the same principle, the spread of secondary and higher education among Muhammadans, and the spread of female education. These suggestions are cited as illustrations of the principle on which the maps should be prepared.

4. For the purposes above set forth, it is thought that maps of the Province on a scale of 80 miles to the inch, or of 64 miles to the inch, are quite sufficient. Either of these scales should be adopted, and it is desirable that one or other of them should be used in preference to any larger scale which would involve the folding up of, and less ready reference to, the maps. In certain cases it may not be practicable to show what is aimed at with distinctness except on a larger scale, but ordinarily the 80-mile or 64-mile scale should suffice, and no map of these Provinces on a larger than the 32-mile scale should accompany the annual report of any Department.

5. The Board of Revenue and the Heads of all Departments will be authorized to indent direct on the Survey Department for their requirements, and the latter will be requested to make arrangements to supply such indents as speedily as possible.

ORDER.—Ordered that the Resolution be published in the *Calcutta Gazette*, and that copies, with copies of the correspondence annexed, be forwarded to the Board of Revenue, Lower Provinces, and the Heads of Departments for information and guidance, and to the Surveyor-General for information.

Ordered also that a copy be forwarded to the Government of India, in the Home, and Revenue and Agricultural Departments, for information, with reference to the Circular from the latter Department No. 64G, dated the 2nd November 1882.

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 18th February 1888.

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.*	Character of the weather and state and prospects of the crops
BENGAL.					
		Western Districts.			
BURDWAN DIVN.	1	Burdwan,	Feb. 18, '88	Nil	Weather—getting warm. *Rubbi* fair. Rice sold at 21 seers per rupee.

	12	Rajshahye	,, 18, '88	Nil	Days warm and nights cool. Rain has done much good to standing crops. Prospect of *ganja* good, but rain has done some injury to it
		Nattore	..	1·80	
		Nowgong	.	0·50	
	13	Rungpur	,, 18, '88	0·09	Weather—getting warm. Prospects of winter crops good.
		Gaibanda	...	0·20	
		Kurigram	..	0·05	
	14	Bogra	,, 18, '88	Nil	Weather—seasonable. State and prospects of crops continue satisfactory.
	15	Pubna	,, 18, '88	0·75	Weather—cloudy and cool. Rain has done good to the crops. Prospects good.
		Serajgunge	...	1·82	
	16	Darjeeling		....	Report not received.
	17	Julpigoree	Feb. 18, '88	Nil	Weather—cold with strong westerly wind. Standing crops doing well. Ploughing for *betri* paddy going on. Prices stationary.
		Eastern Districts.			
DACCA DIVISION.	18	Dacca,	Feb. 18, '88	1·20	Weather—mostly cloudy and cold. Recent rain has done much good to the standing crops. Ploughing of land for early rice is being pushed on. Condition of agricultural stock good
		Munshigunge	.	1·79	
		Naraingunge	.	2·18	
	19	Furreedpur	,, 18, '88	0·77	Weather—cloudy; a copious shower on 14th. Prospects of standing crops good Ploughing continues.
		Goalundo	...	0·72	
		Madaripur	..	0·28	
	20	Backergunge	,, 17, '88	0·34	Weather—seasonable. Prospect of crops good.
	21	Mymensingh	,, 17, '88	0·61	Weather—seasonable. State and prospects of crops continue good.
		Jamalpur	...	0·35	
		Attia	...	1·28	
		Netrokona		0·64	
CHITTAGONG DIVN.	22	Chittagong	Feb. 21, '88	0·40	Weather—seasonable. Prospects of standing crops fair. Prices steady
	23	Noakholly	,, 17, '88	0·36	Weather—unsteady; rather warm, cloudy at times. *Rubbi* crops doing well. Ploughing for *aus* has commenced.
		Feni	..	0·34	
	24	Tipperah	,, 16, '88	1·15	Weather—cloudy. Agricultural prospects have benefited much by rain. Standing crops doing well. Ploughing for *aus* paddy and jute progressing.
		Brahmanbariah	...	0·81	
		Chandpur	.	1·20	
	25	Chittagong Hill Tracts.	,, 14, '88	0·45	Weather—cloudy on the 12th and 13th. *Jum* cutting commenced. Tobacco, chillies and other crops on the ground doing well. Sugarcane is being pressed.
		Hill Tipperah	,, 15, '88	1·05	Weather—cloudy. Sugarcane is still being cut. Prospects of tobacco and chillies fair.

No	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.				
Patna Divn.				
26	Patna	Feb. 18, '88	Nil	Weather—cloudy in the first part of the week; latterly cool and clear. Prospects of *rubbi* and poppy continue favourable. Collection of opium has begun in some places. *Ahar* doing well. Prices of food-grains stationary.
27	Gya	„ 18, '88	Nil	Weather—seasonable. *Rubbi* is progressing tolerably well and is nearly ready. Opium is being extracted.
28	Shahabad	„ 17, '88	Nil	Weather—seasonable. Prospects of *rubbi* continue good; harvesting of the crop has commenced in places. State of poppy is excellent. Opium is being collected in many places and yield is good.
29	Durbhunga	„ 18, '88	Nil	West wind prevailing. Prospects of *rubbi* continue favourable. Mustard and tobacco are being harvested. Poppy in blossom. Prices remain stationary.
30	Mozufferpur	„ 18, '88	Nil	Weather—clear with strong west wind. Prospects of *rubbi* and poppy favourable. Tobacco and mustard are being harvested.
31	Sarun	„ 18, '88	Nil	Weather—seasonable. Prospects of *rubbi* and poppy continue good.
32	Chumparun	„ 18, '88	Nil	Weather—fair and cool; west wind prevails generally. *Rubbi* crop is generally in ear and doing well; it is, however, short in some parts of the district. Extraction of opium has commenced on a small scale; much of the crop is in blossom with fair prospects. Fields are being prepared for *aghani* sowing in the Bettiah sub-division.
Bhagulpore Divn.				
33	Monghyr	Feb. 18, '88	Nil	Weather—seasonable; cloudy at times. Prospects of *rubbi* crops continue good, though cloudy weather has somewhat affected them generally. Collection of opium has begun in places.
	Jamui	...	0·9	
34	Bhagulpur	„ 18, '88	Nil	Weather—occasionally cloudy with west wind; getting warm during the day. Prospects of standing crops fair. Deficient rainfall is likely to affect the outturn of *rubbi*, of which a 10-anna harvest may be estimated.
35	Purneah	„ 18, '88	0·06	Weather—seasonable; westerly wind prevails. Tobacco and mustard crops have given a good outturn. *Rubbi* crops doing well.
36	Maldah	„ 18, '88	Nil	Weather—fine; occasionally cloudy. Gathering of *kalai* and mustard almost over. Prospects of other standing crops continue favourable. Planting of *boro* paddy going on. Common rice selling at an average of 23½ seers per rupee.
	Chauchal	...	0·16	
37	Sonthal Perghs.	„ 18, '88	Nil	Weather—getting warm. Prospects of *rubbi* crops continue fair. Sugarcane is being pressed; outturn good. Prices of food-grains stationary.
	Godda	...	0·10	
	Jamtara	...	0·56	
	Rajmahal	...	0·07	
	Pakour	...	0·08	
ORISSA.				
Orissa Divn.				
38	Cuttack	Feb. 17, '88	0·62	Weather—fair. *Sarad* is being threshed. *Dalua* rice growing well. Price of common rice unchanged.
39	Pooree	„ 16, '88	Nil	Weather—seasonable. Land is being ploughed. *Dalua* crop doing well. Prices stationary.
40	Balasore	„ 17, '88	2·90	Weather—cool and pleasant. Cold-weather crops being reaped, and lands cultivated for sugarcane and rice. Recent rain has probably been very beneficial.
CHOTA NAGPORE.				
South-West Frontier Agency.				
Chota Nagpore Divn.				
41	Hazaribagh,	Feb. 17, '88	Nil	Weather—cloudy at times. Flowering of mango and *mohua* retarded by cloudy weather. Lancing of poppy in progress. Blight has appeared in places; no serious consequences apprehended. Ground being prepared for hot-weather crops. Prices stationary, but high.
42	Lohardugga	„ 18, '88	Nil	Weather—getting warm. Prospect of *rubbi* continues favourable. Prices of food-grains easy.
	Palamow	..	0·38	
43	Singbhoom	„ 17, '88	0·27	Weather—bright and seasonable. Light rain fell during the week. Cotton and *rubbi* crops doing well. Ground is being ploughed for next sowings.
44	Manbhoom	...	......	Report not received.

Published for general information.

SUMMARY OF THE METEOROLOGICAL AND RAINFALL OBSERVATIONS TAKEN IN BENGAL, AND OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN ASSAM, FOR THE MONTH OF JANUARY 1888.

THE normal meteorology of January is very similar to that of the two previous cold-weather months, except that in this month the north-east monsoon conditions are, if anything, more strongly developed than in the earlier part of the season. Temperatures continue low throughout the month, there being a considerable difference between the day and night temperatures, the latter being frequently very low. Fairly strong northerly winds, with practically cloudless skies, prevail, though sometimes towards the end of January southerly winds set in at the stations on the sea coast in the south of the province. Pressure is also usually high throughout the month, and humidity is moderate. Under these normal conditions rainfall is practically absent from the whole province, but from time to time the normal conditions are liable to be almost entirely reversed by the formation or appearance of barometric depressions over Northern India, which subsequently drift in a southerly or south-easterly direction through Central India and the North-Western Provinces, and may even pass over Bengal. These disturbances give southerly and south-easterly winds in Bengal, with heavily clouded skies and damp rainy weather; the day temperature during such times becoming very low, but the minimum or night temperatures rise very rapidly. During the occurrence and passage of these depressions or feeble storms, therefore, weather conditions in Bengal became almost entirely reversed, and these disturbed conditions may last perhaps three or four days at a time.

The average rainfall of January in Bengal is very small, and is entirely brought up by the disturbed conditions just referred to. The rainfall is in most districts only equal to about half an inch while the largest variations are from a fall of 0·32 inch in Orissa to one of 0 61 inch in Behar.

Meteorology of the month.—The chief features in the meteorology of January 1888 have been—

1. Pressure has been decidedly in excess over the whole of the Province of Bengal, the excess averaging about 0 033 inch, the distribution of the excess being fairly equal in different districts In Assam pressure has been almost normal.
2. Temperature has been decidedly below the normal over the whole of Bengal, the mean temperature being in defect by 1·3°. In Assam, on the other hand, temperature has been almost normal.
3. Humidity has been decidedly below the normal at almost all stations.
4. Cloud proportion has been decidedly larger than usual at almost every station in Bengal and Assam.
5. At the latter end of the month a very well marked and influential barometric depression travelled from near Quetta through Central India, and passed through the south of the province entering the Bay of Bengal near Gopalpore, and crossing it to near Akyab, where it again passed inland or disappeared.
6. Comparatively heavy rainfall has been received over Chutia Nagpur, South Behar, Orissa, South-West and East Bengal, and light rain in North Bengal and North Behar.

The only point of interest in the meteorology of the early part of January was the formation of a cyclonic storm in the Arabian Sea, which travelled in a northerly direction up the Bombay coast, and which reached Bombay about the 4th or 5th of the month. The existence of this storm apparently accounted for the partial reversal of the north-east monsoon or cold-weather conditions which took place in Chutia Nagpur and South Behar, and over parts of Bengal from about the 4th to the 6th of the month, during which time moderate rain fell over Chutia Nagpur and South Behar. From this time, up till about the 20th of the month, there were no changes of any practical importance, and fine settled weather obtained for the greater part of the time; but from this date the settled conditions commenced to change. On the 20th the weather conditions over the whole of India were fairly normal except that a large low pressure area was appearing, the centre of which was south of Quetta and west of Jacobabad. On the 21st the area of low pressure moved to the east-south-eastward, and a large diffused depression existed over Sind, Guzerat, Central India and the Berars. On the 22nd the depression concentrated and became rather more local, and the centre appeared to the west of Ajmere and Jeypore. On the 23rd the depression travelled slowly south-eastward, and the centre was near Seoni in the Central Provinces, while on the 24th it had advanced to near Raipur. On the 25th and 26th the depression continued its east-south-easterly advance, and on the 27th it was near Gopalpur, and it subsequently entered the Bay of Bengal, crossing it apparently in an almost due easterly direction, and on the 29th it was approaching the east coast of the Bay, and its centre was not far from Akyab, while on the 30th it had apparently passed inland into Upper Burma, or perhaps had broken up, and the depression ceased to exert any further influence on the meteorology of India. This important storm, though only of decidedly feeble nature, had therefore a life history of at least ten days, and it certainly travelled over a distance of practically two thousand miles, if not considerably further.

This depression or feeble storm naturally very materially influenced the weather in Bengal, and the usual north-east monsoon conditions became almost entirely reversed. The reversal of the conditions commenced in the western and northern districts, and gradually spread over the eastern and south-eastern. Thus from about the 22nd, skies clouded over

and rain commenced to fall in South Behar and Chutia Nagpur; these conditions extended to parts of South-West Bengal on the 23rd, and on the 26th and 27th disturbed conditions existed over the whole province, and moderate to heavy rain became general in all districts. At this time the depression was lying over Orissa, and the whole province was influenced by it. At the same time the northerly wind current which had been previously blowing over Bengal became almost reversed, and light southerly winds were reported in many instances. Humidity also rose very rapidly, while the night temperatures increased, though the day temperatures still remained low. With the continued south-easterly or easterly movement of the depression, the area of rainfall moved to the eastward, and on the 28th rain fell pretty generally in East Bengal and at the stations in and near the hills of North Bengal, while a few showers fell in Orissa; but after this date skies cleared rapidly, temperature and humidity decreased, and pressure rose very generally, while a strong and very cold northerly current flowed over Bengal, the air currents at this time being of a particularly low temperature, owing apparently to the cooling effect of the accumulation of snow on the hills, and to the heavy rainfall over Upper India. The snowfall in the hills, due to this storm, appears to have been very heavy, and several stations reported falls of snow several days in succession. At the close of the month therefore the cold-weather conditions were present over Bengal and Assam in a well marked manner.

Pressure.—The variations of pressure during the month have been rather large; during the first week pressure was above the normal by 0 072 inch; in the second week this excess had fallen to 0 05 inch, while in the third week a rapid fall had taken place, and pressure became 0 014 inch in defect. A slight recovery took place towards the end of the month, and for the last week pressure was again in excess by 0 02 inch. For the whole month, taking into consideration only those stations from which observations have been received for a series of years, and which therefore yield reliable averages, the mean pressure of the province of Bengal has been 0·033 inch in excess of the normal. The largest excess registered is one of 0 016 inch at Berhampore. In Assam the variations of the mean pressure from the normal have been very small, the largest being an excess of 0 01 inch at Sibsaugor, while the average pressure of all the stations has only been 0 005 in excess.

Temperature.—The variations of temperature have also been large, particularly towards the end of the month, and at some stations the day temperature for the last week averaged 8° and 9° below the normal. As during the earlier part of the month temperature had been in certain cases rather considerably above the normal, the mean variation for the whole month is comparatively small, and temperature in Bengal has generally been 1·3° in defect. The largest defect has been in Chutia Nagpur, where it has averaged nearly 3°. In Assam, on the other hand, the variation of temperature from the normal has been a defect of only 0·3°.

The actual variations and oscillations of temperature for the month are best shown in the following table, where the average maximum, minimum and mean temperatures at nine typical stations in different districts of the province are given week by week, and compared with the normal values for the same periods. Speaking broadly, it may be said that temperature was very considerably above the normal during the first week, slightly below it in the second, that the defect had increased somewhat in the third, while in the fourth week the variations below the normal were very large, particularly in the maximum or day temperatures.

Monthly variation table of temperature from the weekly comparison table during January 1888.

Rainfall—Has been heaviest in Orissa, the stations of which average about one and a third inches, which is about four times the normal fall; East Bengal and Chutia Nagpur have each received an average of about one and a quarter inches, or rather more than twice the normal fall. In South-West Bengal and South Behar the rainfall has averaged nearly an inch, or about twice the usual amount, but in North Bengal and North Behar the falls have

been smaller than usual; in North Behar the fall has been less than half an inch, or about four-fifths of the normal, while North Bengal has received on the average less than a quarter of an inch, or about half the normal fall. The rainfall during the month has been very well distributed and very general, and except at a few stations in North Bengal, all stations in the province report fairly good rain.

The following table gives the summary of the temperature and rainfall data of each of the seven Meteorological Divisions of the province for the month of January 1888:—

Meteorological Divisions.	Temperature.						Rainfall.							
	Highest observed during month.	Lowest observed during month.	Averages for month.			Average mean of month above or below normal mean of month.	Of month.			Rainy days.			Since 15th May 1887.

The total fall from 1st January to 18th February 1888	2·52
The average fall of the corresponding period for 24 years, S. G.'s Office ...	1·15

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 56, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

o overcast, g gloomy, t thunder, d drizzling rain, lr lightning reflection, [dew] dew, ≡ fog.

N.B.—In the weekly report from 5th to 11th February 1888, read 0 11 inches for 1·11 inches as the rainfall of 10th February 1888.

A. PEDLER,

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten
The *humidity* of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number
the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 13
station in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 17th of February 1888.

Average humidity at 10 A.M.	Average cloud amount at 10 A.M. for week.	Rainfall of week at observing station.	Of week. Mean for district.	Of week. Normal mean.	Rainfall since 1st of Month. Mean for district.	Since 1st of Month. Normal mean.	Since 1st of Month. Variation.	Since 15th May 1887. Mean for district.	Since 15th May 1887. Normal mean.	Since 15th May 1887. Variation.	Average number of rainy days.	Normal number of rainy days.	Representative station.	District.	Meteorological Division.

Explanation.—Indicates that no rain has fallen. If the return for any station has not been received, the corresponding space is left blank. If any of the returns are wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the* 21*st February* 1888.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 17TH OF FEBRUARY 1888.

At the close of the previous week a low pressure area had been developed over Orissa and parts of West Bengal, and on Friday, the 10th, the depression had drifted in an easterly direction and had established itself over East Bengal, giving moderate to heavy rain over this district. On the 11th or the first day of the present week, however, pressure increased briskly over East Bengal and Assam, and slightly over the other parts of Bengal, and the depression practically disappeared and weather conditions therefore rapidly improved over the province, while temperature commenced to fall rather rapidly, and on this day rainfall was practically absent over the whole province. On the 12th, however, owing to rather irregular barometric changes which took place over Upper India, a large shallow depression was formed over North-Western India, Guzerat and the Central Provinces, and with the formation of the disturbance a few showers fell in Orissa. On the 13th the barometric depression apparently moved towards the east, and it commenced to affect the weather in Bengal and Orissa when winds strengthened in Orissa and conditions again became unsettled. Skies also clouded over and rain commenced to fall, rainfall being received at a considerable number of stations in Orissa and in South-West and East Bengal, and at a few in North Bengal. On the 14th the depression enlarged and became more shallow, and through it still extended over a considerable part of Bengal its effect was feeble, and again on this day rain showers were received only in parts of Orissa, South-West and East Bengal, and the rainfall did not extend to the other districts, though a few local showers were reported from Chutia Nagpur. On the 15th the low pressure area was still more feeble, and on the 16th it had entirely disappeared. For the remainder of the week therefore conditions in Bengal became settled and rainfall ceased.

The winds blowing over the province during the greater part of the week have been more or less northerly at the majority of stations, but at all the coast stations and at some of those inland, and particularly when affected by the depression, southerly winds set in for several days. As usual, also, with the setting in of southerly winds, humidity and temperature increased rather rapidly. In these respects therefore the conditions have been those which usually mark the commencement of the transition from the north-east monsoon to the hot season.

Pressure.—The variations of pressure during the week have been rather large; on the first day pressure rose rather rapidly, but from the 12th up to the 15th (inclusive) pressure fell steadily and rather rapidly, the fall in many cases exceeding a tenth of an inch; on the 16th pressure increased, but on the 17th it again fell at many stations. The mean pressure of the whole province for the week has therefore been 0·06 inch below the normal.

Temperature.—For the first four days of the week temperature steadily rose, and at some stations there was an increase in the mean temperature of nearly 10° during this period. A slight fall then set in which became rather rapid at the close of the week. In addition, too, on the 16th and 17th, there was a very rapid fall in the humidity. For the whole week the mean temperature of the province has been 0·8° in excess of the normal

The distribution of temperature during the week is best seen from the figures given in the table below, where the average maximum, minimum and mean temperatures at nine typical stations in different districts of the province are given and compared with the normal values for the same period. At these stations the day temperatures have been considerably below the normal, while the night temperatures have been above it. The mean temperature is more nearly normal.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending the 17th February 1888.

	Normal mean maximum temperature for the week ending 17th February.	Actual mean maximum temperature for the week ending 17th February 1888.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 17th February.	Actual mean minimum temperature for the week ending 17th February 1888.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 17th February.	Actual mean daily temperature for the week ending 17th February 1888.	Variation of actual mean from the normal.

Darjeeling	45·5	42·7	−2·8	33·0	30·6	−2·4	39·3	36·7	−2·6

Rainfall.—The stations in East Bengal and Orissa have received an average rainfall of rather more than half an inch, while those in South-West Bengal average a quarter of an inch. The stations in North Bengal have received about a tenth of an inch. The other districts have been practically rainless.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 17th of February 1888:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.

" ...	16th ...	71·4	80·9	19·0	61·9	63·6	·485	58·1	63	"
" ...	17th ...	70·1	82·1	23·1	59·0	59·0	·354	49·4	48	"
" ...	18th ...	72·9	83·4	19·3	64·1	67·1	·587	63·5	73	"

The mean temperature of the seven days	71·1°
The extreme variation of temperature	27·1
The maximum temperature	84·2
The mean relative humidity	73 %
The total fall of rain from 12th to 18th February 1888	Nil (Inches)

The mean temperature and humidity are obtained by applying to the mean of the 10h, 16h, and minimum readings a correction dependent on the range, and derived from the hourly observations at the Surveyor-General's Office, Chowringhee, in past years.

METEOROLOGICAL OFFICE, INDIA;
The 20th February 1888.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

MEMORANDUM.

The table appended to this memorandum furnishes the following particulars in connection with the registration of births and deaths in the principal Municipalities in Bengal during the week ending 28th January 1888:—

1. The birth-rate in these Municipalities amounted to 20·4 per 1,000 of population against very nearly the same proportion, viz, 20 2 per 1,000 in the preceding week ending 21st January, and the death-rate to 26 1 against 25 3 per 1,000.

2. The following Municipalities returned the highest proportions of births and deaths:—

Births.	Ratio per mille	*Deaths*	Ratio per mille
Utterpara	56 6	Serampore	60 8
Narainganj .. .	49·7	Suburbs of Calcutta	47 1
Serampore	33 4	Hughli . ..	40 3
Beauleah	31 5	Burdwan	38 1
Durbhanga	31 5	Puri	37 8

3. In comparison with the results of the preceding week, there was a noticeable enhancement of mortality from the maladies coming under the head of "other causes," while the fatal results from the other diseases exhibited only fractional differences, *vide* figures given below—

	Ratio per mille during the weeks ending— 28th Jan 1888	21st Jan 1888
Cholera	2 6	3 0
Small pox	1	03
Fever	10 3	10 9
Bowel-complaints	4 4	4 1
Injury	1	3
Other diseases	8 3	6 9

4. Of the diseases abovenamed, cholera, fever and "other causes" proved conspicuously fatal in the following Municipalities, and bowel-complaints only in the Puri town, where the death-rate from it stood at 12 6 per 1,000 of population:—

Cholera	Ratio per mille	*Fever.*	Ratio per mille	*Other causes.*	Ratio per mille
Serampore .	27 5	Burdwan .	21 1	Serampore	19 6
Puri ...	8 4	Hughli	24 8	Suburbs of Calcutta ...	14 7
Suburbs of Calcutta	7 0			Puri	12 6
				Gya ...	12 3
				Monghyr ...	10 8

5 The casualties in relation to *Sex*, *Class* and *Age* were returned at the rates indicated below—

According to Sex.	Ratio per mille	*According to Class.*	Ratio per mille	*According to Age.*	Ratio per mille.
Males	28 7	Christians	39 1	Under 1 year ...	200 6
Females	23 2	Hindus	25 3	1 and under 5 years ...	26 5
Ratio of male deaths to every 100 female deaths ..	110	Mahomedans ...	27 9	5 „ 10 „ ...	13 1
				10 „ 15 „ ...	13 1
				15 „ 20 „ ...	19 9
				20 „ 30 „ ...	16 5
				30 „ 40 „ ...	17·3
				40 „ 50 „ ...	22 7
				50 „ 60 „ ...	28 4
				60 years and upwards ...	69 1

R. Lidderdale, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorized form of age classification.

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,
The 20th February 1888.

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

MEMORANDUM.

The birth and death returns of the principal Municipalities in Bengal yield the following results for the week ending 4th February 1888 :—

1. The ratios per *mille* of births and deaths for the period above referred to stand at—for births 19·2 and for deaths 21·8, the records of the preceding week ending 28th January, being 20·4 and 26 1, respectively, showing a retrogression in the registration of both.

2. In the following Municipalities births and deaths were registered at the highest rates :—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Narainganj	57·9	Utterpara	113·2
Darjiling	45 6	Beauleah	60·4
Comillah	34·6	Serampore	51·0
Midnapore	34·1	Suburbs of Calcutta	45 3
Serampore	33·4	Kishnaghur	30·3
Monghyr	33 1	Gya	29·4
Arrah	32 3	Puri	29·4
Beauleah	31·5		

3. The casualty-rates from the principal diseases specified below exhibit no noticeable variations in comparison with the death-rates from the same diseases in the preceding week :—

	Ratio per *mille* during the weeks ending—	
	4th Feb 1888	28th Jan. 1888.
Cholera	2·4	2·6
Small-pox	·1	·1
Fever	9·9	10 3
Bowel-complaints	4·6	4·4
Injury	·4	·4
Other causes	7·4	8·3

4. While no Municipality suffered much from small-pox or presented a large number of casualties from injury, the following returned conspicuously high death-rates from the rest of the diseases mentioned in the above table :—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Bowel-complaints.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille*
Utterpara ...	81·9	Beauleah ...	62·5	Serampore ...	13·7	Serampore ...	17·7
Suburbs of Calcutta ...	7·4	Burdwan ...	22·9	Howrah ...	11 1	Gya ...	15·7
Puri ...	6 3			Suburbs of Calcutta ..	10 8	Midnapore ...	12·4
Serampore ...	5 9					Suburbs of Calcutta ...	12·4
Hughli ..	4 0						

It will be noticed that cholera prevailed with marked severity in Utterpara and fever in Beauleah.

5. Distributed under the heads of *Sex, Class* and *Age*, the mortality of the week under notice stood as follows :—

According to Sex.

	Ratio per *mille.*
Males	25·6
Females	23·8
Ratio of male deaths to every 100 female deaths	121

According to Class.

	Ratio per *mille.*
Christians	21·7
Hindus	26·1
Mahomedans ...	21·9

According to Age.

	Ratio per *mille.*
Under 1 year ...	178·4
1 and under 5 years ...	23·2
5 " 10 " ...	12·3
10 " 15 " ...	7·2
15 " 20 " ...	17·8
20 " 30 " ...	14·4
30 " 40 " ...	19·6
40 " 50 " ...	18·5
50 " 60 " ...	35·0
60 years and upwards ...	73·6

The 20th February 1888.

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

Statement showing the Results of the Registration of Births and Deaths in the Principal Municipalities in Bengal during the week ending 4th February 1888.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remain as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table except "Age," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the ... of age classification.

* In the Buxar Division (Main Western Canal and Buxar Canal) the totals are less by 2,154 acres than the area shown in November's return owing to annual having been converted into five-year leases; 1,448 acres only have been added, the actual measurements being less than the approximate areas originally applied for.

The 21st February 1838.

A. D. McArthur, *Major*, R.E.,
Under-Secretary to the Govt. of Bengal.

PUBLIC WORKS DEPARTMENT,—BENGAL.

IRRIGATION BRANCH.

Statement showing heights over mean sea-level and low-water in the Rivers Ganges, Bhagiruthee, Jellinghee, and Brahmapootra, for the month of April 1887.

The 21st February 1888.

A. D. McArthur, *Major*, R.E.,
Under-Secretary to Govt. of Bengal.

PUBLIC WORKS DEPARTMENT—BENGAL.

IRRIGATION BRANCH.

Statement showing heights over mean sea-level and low water in the Rivers Ganges, Bhagiruthee, Jellinghee, and Brahmapootra, for the month of May 1887.

Date.	River Ganges. Mirzapore. From Allahabad 86 miles. Height over zero of gauge.	Mirzapore. Height over mean sea-level.	Benares. From Allahabad 134 miles. Height over zero of gauge	Benares. From Mirzapore 48 miles. Height over mean sea-level.	Buxar. From Benares 90 miles. Height over zero of gauge.	Buxar. Height over mean sea-level.	Dinapore. From Benares 177 miles. Height over zero of gauge	Dinapore. From Buxar 87 miles. Height over mean sea-level.	Monghyr. From Benares 287 miles. Height over zero of gauge.	Monghyr. From Dinapore 110 miles. Height over mean sea-level.	Sahebgunge. From Benares 381 miles. Height over zero of gauge.	Sahebgunge. From Monghyr 94 miles. Height over mean sea-level.	Rampore Beauleah. From Benares 471 miles. Height over zero of gauge.	Rampore Beauleah. From Sahibgunge 90 miles. Height over mean sea-level.	Goalundo. From Benares 501 miles. Height over zero of gauge.	Goalundo. From Rampore Beauleah 120 miles. Height over mean sea-level.	River Bhagiruthee. Berhampore. Height over zero of gauge.	Berhampore. Height over mean sea level.	River Jellinghee. Sarupgunge. Height over zero of gauge.	Sarupgunge. Height over mean sea-level.	River Brahmapootra. Gowhatty. Height over zero of gauge.	Gowhatty. Height over mean sea-level.

GRANT TO THE BEHAR SANSKRIT SANJIVAN.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 25th February 1888.

RESOLUTION.

READ—

A letter from the Director of Public Instruction, No. 8129, dated 29th December 1887, reporting the establishment at Bankipore of the Behar Sanskrit Sanjivan.

The Lieutenant-Governor is gratified to learn that an Association has been established at Bankipore, under the name of the Behar Sanskrit Sanjivan, with the object of encouraging the study of Sanskrit in Behar. The Association proposes to raise the tols of Behar, or a large proportion of them, to the standard of the annual Sanskrit Title Examination for students throughout Bengal, by instituting subordinate examinations and awarding prizes and scholarships, and the concomitant expenses have been estimated at Rs 1,700 a year, of which Rs. 1,200 is expected to be raised by local subscriptions, while a Government grant to meet the balance is now asked for. The Lieutenant-Governor approves the scheme, and, as recommended by the Director of Public Instruction, is pleased to sanction an annual grant of Rs. 500 to the Behar Sanskrit Sanjivan with effect from the 1st April next, on condition that the sum of Rs. 1,200 is regularly contributed from private sources

ORDER.—Ordered that a copy of this Resolution be forwarded to the Director of Public Instruction for information, and to the Financial Department of this office for information and communication to the Accountant-General.

Ordered also that a copy of this Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

LIBERALITY OF BABOO BIROJA PROSAD BASU.

GENERAL DEPARTMENT—EDUCATION.

Calcutta, the 28th February 1888.

RESOLUTION.

READ—

Endorsement from the Commissioner of the Presidency Division, No. 3M.E., dated 6th January 1888, and its annexures, on the subject of a proposal by Baboo Biroja Prosad Basu, of Jessore, to make an endowment for the purpose of providing for the award of a silver medal in alternate years on the result of the University Entrance Examination.

Letter from the Director of Public Instruction, No. 1001, dated 18th February 1888, reporting on the above.

To perpetuate the memory of his deceased wife, Baboo Biroja Prosad Basu, a pleader of the Judge's Court, Jessore, has made over to the Magistrate of Jessore three Government Securities of the value of Rs. 100 each, from the interest of which it is proposed to award in alternate years a silver medal of the value of Rs. 12 to that student of the Taki and Jessore Government Schools who shall have passed highest at the Entrance Examination of the Calcutta University in the first division, or, in the event of there being no such student, to the student who stands first in the general Entrance Examination list of the University.

2. The Lieutenant-Governor is pleased to accept the endowment, and tenders his thanks to the founder for his liberality. The Director of Public Instruction will be the administrator of the fund, and the Government Securities should be endorsed to the Comptroller-General and forwarded to the Accountant-General, Bengal, for safe custody.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Commissioner of the Presidency Division for information and communication to the donor, and to the Director of Public Instruction for information.

Ordered also that a copy of this Resolution be published in the *Calcutta Gazette.*

By order of the Lieutenant-Governor of Bengal,

P. NOLAN,

Secretary to the Government of Bengal.

REPORT ON THE STATE OF THE SALT MARKET FOR THE THIRD QUARTER OF 1887-88.

No. 108B, dated Calcutta, the 11th February 1888.

From—K. G. GUPTA, ESQ., Offg. Secretary to the Board of Revenue, L.P.,
To—The Secretary to the Government of Bengal, Financial Department.

SALT.

F. B. PEACOCK, ESQ.

I AM directed by the Board of Revenue to submit the following report on the state of the salt market for the third quarter of 1887-88, comprising the months of October, November, and December 1887.

2. The quantity of salt of every description cleared during the quarter under report amounted to 27,10,003 maunds 8 seers 2 chittacks against 24,04,508 maunds 23 seers 4 chittacks in the previous quarter, and 25,83,058 maunds 31 seers 10 chittacks in the corresponding quarter of the previous year; and the net amount of duty levied thereon was Rs. 50,56,522-2-8 against Rs. 45,13,822-8 in the previous quarter, and Rs. 47,95,125 in the corresponding quarter of the previous year.

3. The quantity of excise salt sold in the districts of Cuttack, Pooree and Balasore during the quarter under review from the stock of the different seasons' manufacture, and the quantities which remained in store at the close of the quarter, are shown in Table I:—

Division	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.					
PATNA DIVN.	26	Patna	Feb. 25, '88	Nil	Weather—days getting warmer; nights still cool. Prospects of *rubbi* continue favourable. Mustard is being gathered in places. Poppy promises well; opium is being extracted in places. Prices stationary.
	27	Gya	" 25, '88	Nil	Weather—seasonable. *Rubbi* progressing tolerably well and is nearly ready. Opium being extracted.
	28	Shahabad	" 25, '88	Nil	Weather—bright and clear; a little hot in the day. Harvesting of *rubbi* crops is in progress and the prospects are hopeful. In places sugarcane is being planted. Weather continues favourable for poppy; the drug is being collected and the outturn is reported to be abundant.
	29	Durbhunga	" 25, '88	Nil	Weather—seasonable. Prospects of *rubbi* continue favourable. Mustard and tobacco are being gathered. Extraction of opium has commenced in places. Prices remain stationary.
	30	Mozufferpur	" 25, '88	Nil	Weather—mostly clear and getting warm. Prospects of *rubbi* crops favourable. Poppy doing well; collection of drug has commenced.
	31	Sarun	" 25, '88	Nil	Weather—getting hot; westerly winds throughout the week. Prospect of *rubbi* continues good. Harvesting of peas commenced; outturn favourable. Opium is being collected.
	32	Chumparun	" 25, '88	Nil	Weather—fair with west wind. *Rubbi* crop doing well. Opium being collected. Prospects fair. Indigo sowings commenced.
BHAGULPORE DIVN.	33	Monghyr	Feb. 25, '88	Nil	Weather—seasonable; west wind prevailing. *Rubbi* is progressing fairly and the prospects continue good. Indigo sowings have commenced in the Begoo-serai sub-division.
	34	Bhagulpur	" 25, '88	Nil	Weather—getting warm during the day; west wind prevailing. Prospects of *rubbi* crops fair; a 10-anna harvest only expected.
	35	Purneah	" 25, '88	Nil	Weather—warmer. *Rubbi* crops doing fairly well. Mustard nearly harvested.
	36	Maldah	" 25, '88	Nil	Weather—seasonable. *Rubbi* doing well except in outpost of Tulsihatta where the crop has suffered to some extent for want of rain. Transplantation of *boro* paddy continues. Common rice selling at an average of 23 seers per rupee.
	37	Sonthal Perghs.	" 25, '88	Nil	Weather—temperature rising with strong westerly winds. Winter crops doing well. Outturn at Rajmehal estimated at 10 to 12 annas. Sugarcane in Godda now planted out. Mango trees are in blossom.
ORISSA.					
ORISSA DIVN.	38	Cuttack	Feb. 24, '88	0·02	Weather—fair and seasonable. *Dalua* rice is being transplanted. Ploughing has commenced. Common rice sells at 21 seers per rupee in town. Cattle-disease occurs in some places in the interior.
	39	Pooree	" 23, '88	1·46	Weather—seasonable. Land is being ploughed. *Dalua* crop thriving. Prospect of mango good. Common rice sells at 26 seers 5 chittacks per rupee in the Sudder sub-division and 24 seers 1 chittack in the Khorda sub-division.
	40	Balasore	" 24, '88	Nil	Weather—getting warmer. Lands being tilled for rice cultivation; few crops on the ground.
CHOTA NAGPORE.					
South-West Frontier Agency.					
CHOTA NAGPORE DIVN.	41	Hazaribagh	Feb. 24, '88	Nil	Weather—cloudy till 22nd; clear since. Prospects of *rubbi* unchanged. Wheat, barley, and gram approaching maturity. The average yield is expected to be 8 annas. Mango and *mohua* coming in blossom. Poppy being lanced and the drug collected. Cattle-disease continues to be reported from places.
	42	Lohardugga	" 25, '88	Nil	Weather—seasonable and clear. *Rubbi* doing well. Prices steady.
	43	Singbhoom	" 21, '88	Nil	Weather—sunny; getting warm. Cotton doing well. The oilseeds and gram are also reported well. Cattle-disease exists in thana Bahragora.
	44	Manbhoom	" 25, '88	Nil	Weather—getting warmer. Sugarcane pressing in progress. Outturn excellent. Prospects of all spring crops good.

Memoranda. - Summary. - The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last [illegible] The humidity of the atmosphere are [illegible] and [illegible] percentage, saturated all being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number [illegible] the [illegible] means or average of the rainfall in that district determined from the return sent in by the sub-divisional station for the period in question during the past [illegible] station in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

or the week ending Friday, the 24th of February 1888.

Average humidity at 10 A.M.	Average cloud amount at 10 A.M. for week.	Rainfall of week at observing station.	DISTRICT OBSERVATIONS. Rainfall. Of week. Mean for district.	Of week. Normal mean. Explanation. Indicates that no rain has fallen. If the return for any day has not been received the corresponding space is left blank. If any of the returns are wanting the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA *the* 28*th February* 1888.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 24TH OF FEBRUARY 1888.

THE meteorological conditions which obtained over Bengal at the close of the previous week were those which mark the transition from the cold weather period to the commencement of the hot season. These conditions have also held good throughout the present week. The winds blowing at the southern stations have been very variable in direction, southerly winds prevailing on some days and on others being driven back by a northerly or north-westerly current. Westerly winds have prevailed generally at the inland stations, and in Behar these winds have decidedly increased in force. The variations in temperature have been considerable, there being great difference between the temperatures of the day and night, and on the whole there has been a steady rise of temperature during the week, and the mean temperatures of the last days were decidedly higher than those at the commencement of the week. The changes of humidity have also been remarkable, and from the 18th to the 19th in particular a very rapid decrease in humidity took place, the decrease at Saugor Island equalling no less than 53 per cent., while at Calcutta the decrease was 45 per cent. On the whole, the humidity for the week has been moderately low. For the greater part of the week the movements of the barometer have been small, though pressure has steadily risen for about five days, but on the 19th and 24th pressure increased somewhat rapidly. Over the greater part of the province therefore the meteorological conditions for the week call for no remark, beyond that fine clear weather, with increasing temperature, rather low humidity, and no rain, has generally prevailed; but, on the other hand, for the first day or two in the week conditions were slightly unsettled in East Bengal, and light rain was received, particularly in the Chittagong district.

Pressure.—The mean pressure recorded in the province for the week, taking into consideration only those stations from which observations have been received for a series of years, and which therefore yield reliable averages, has been slightly above the normal at about one-third of the stations and slightly below it at the remainder. For the whole province pressure has been in defect by 0·005 inch.

Temperature.—The mean temperature of the whole province for the week has been in excess of the normal by one degree, but the excess has been largest in Orissa, Chutia Nagpur, and South Behar. The distribution of temperature and its variation from the normal are best seen from the figures given in the following table, where the average maximum, minimum, and mean temperatures at nine typical stations in different districts of the province are compared with the normal values for the period.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending the 24th February 1888.

	Normal mean maximum temperature for the week ending 24th February.	Actual mean maximum temperature for the week ending 24th February 1888.	Variation of actual mean from the normal.	Normal mean minimum temperature for the week ending 24th February.	Actual mean minimum temperature for the week ending 24th February 1888.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 24th February.	Actual mean daily temperature for the week ending 24th February 1888.	Variation of actual mean from the normal.

Rainfall.—Except for showers in East Bengal on the 18th and 19th, the whole province has been rainless throughout the week. The rainfall in East Bengal has been mainly confined to the Chittagong district, which has received an average fall of 0·51 inch, and to the Chittagong Hill Tracts which has received an average amount of 0·64 inch.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 24th of February 1888:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of month.		Since 15th May 1887.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The total fall from 1st January to 25th February 1888	2·52
The average fall of the corresponding period for 24 years, S. G.'s Office	1·36

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph, and from observations made at 6h, 10h, 16h, and 22h.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 56, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph

The mouth of the rain-gauge is one foot above the ground.

o overcast, ⌓ dew, = fog.

A. Pedler,
For Offg. Meteorological Reporter to the Govt. of India.

Meteorological Office, Govt. of India;
Calcutta, the 27th February 1888.

MEMORANDUM.

THE annexed table presents the mortuary statistics of the districts in Bengal (containing a population of 66,163,884) for the month of December 1887. The results to be gathered from it, contrasted with those for the preceding month and for the corresponding month of the past year, are the following :—

1. Deaths registered—

	During the months of—		
	Dec. 1887.	Nov. 1887.	Dec. 1886.
Number	145,349	147,957	187,707
Ratio per *mille*	26·28	26·76	33·96

The above figures indicate, as compared with the corresponding month of the preceding year, a large decrease in the number of deaths recorded.

2. The highest casualty-rates were returned from the following districts :—

Districts	Ratio per *mille*.
Maldah	48·00
Dinajpur	41·40
Rajshahye	41·28
Julpaiguri	41 16
24-Pergunnahs	40 32
Rungpore ..	40·08
Bogra ...	39·72
Birbhum	38·52
Backerganj	38·16
Nuddea	36·00
Murshidabad	36 00
Purneah	35·40
Khulna	35·04
Pubna . .	34·92
Howrah .. .	34 20
Puri	33·00
Midnapore	31·80
Hughli ...	31·44
Jessore	30·84
Monghyr ..	30·24
Darjiling	30·00
Bhagulpore	29·28

3. As compared with the results of the corresponding month of the past year, the mortality from cholera and fever declined considerably, the death-rate from injury was stationary, and there were no noticeable differences in fatal results from the other diseases; *vide* figures given below :—

	Ratio per *mille* during—	
	December 1887.	December 1886.
Cholera	·84	4 32
Small-pox	·03	·02
Fever	20 52	24 12
Bowel-complaints	·84	1·08
Injury	·12	·12
Other causes	3 72	4·08

4 The undermentioned districts suffered pre-eminently from cholera, fever and the unspecified diseases coming under the head of "Other causes," the other diseases (indicated in the above table) manifesting no noticeable exacerbations :—

Cholera.	Ratio per *mille*.
24-Pergunnahs ...	6·84
Puri ...	4·68
Howrah ..	4·56
Midnapore ...	4·32
Balasore ...	3·36
Chittagong ...	2·28
Mymensing ...	2·16

Fever.	Ratio per *mille*.
Maldah	47·28
Rajshahye	39 96
Dinajpur	38·40
Rungpur	37 92
Julpaiguri	37·32

OFFICE OF SANITARY COMMISSIONER FOR BENGAL,
The 23rd February 1888.

R. LIDDERDALE, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

MEMORANDUM.

For the week ending 11th February 1888, the returns from the principal Municipalities in Bengal disclosed the following results :—

1. That births were registered at the rate of 18·4 per 1,000 of population, and deaths at 21·9 per 1,000 as opposed to 19·2 and 24·8 per 1,000, respectively, during the preceding week ending 4th February, indicating a considerable falling off in the registration of deaths.

2. That the undermentioned Municipalities returned the highest proportions of births and deaths :—

Births.	Ratio per *mille.*	*Deaths.*	Ratio per *mille.*
Arrah	38·3	Utterpara	56·6
Narainganj	37·3	Suburbs of Calcutta	36·8
Monghyr	30·7	Ranaghat	29·9
Durbhanga	29·9	Beauleah	28·9
Bhagulpore	29·0		

3. That in comparison with the results of the preceding week, the only noticeable point is, that there was a sensible abatement in the mortality from bowel-complaints and the maladies coming under the head of "Other causes," *vide* subjoined table :—

	Ratio per *mille* during the weeks ending—	
	11th Feb 1888.	4th Feb. 1888
Cholera	1·8	2·4
Small-pox	·03	·1
Fever	10·1	9 9
Bowel-complaints	3·6	4·6
Injury	·2	·4
Other causes	6·1	7·4

4 That the greatest suffering from cholera, fever, and "other causes" occurred in the following Municipalities, the other diseases exhibiting no special local severity :—

Cholera.	Ratio per *mille.*	*Fever.*	Ratio per *mille.*	*Other causes.*	Ratio per *mille.*
Utterpara ...	28·3	Ranaghat ...	29·9	Dacca ...	11·7
Serampore ...	5·9	Beauleah ...	26·3	Midnapore ...	10·8
Howrah ...	4·6			Arrah ...	10·8
Suburbs of Calcutta ...	3·9			Suburbs of Calcutta ...	9·5
Gya ...	3·4			Bhagulpore ...	9·1

5. That the mortality of the week, classified under the heads of *Sex, Class* and *Age*, stood as shown below :—

According to Sex.	Ratio per *mille.*	*According to Class.*	Ratio per *mille.*	*According to Age.*	Ratio per *mille.*
Males	23·3	Christians	8·7	Under 1 year ...	135·5
Females	20·3	Hindus	22·7	1 and under 5 years ...	22·3
Ratio of male deaths to every 100 female deaths	130	Mahomedans ...	20·2	5 „ 10 „ ...	7·1
		Budhists	48·4	10 „ 15 „ ...	10·9
		Other classes ...	36·4	15 „ 20 „ ...	13 6
				20 „ 30 „ ...	12·9
				30 „ 40 „ ...	18·0
				40 „ 50 „ ...	19·8
				50 „ 60 „ ...	3 ·6
				60 years and upwards ...	64·6

R. Lidderdale, M.D., *Deputy Surgeon-General,*
Sanitary Commissioner for Bengal.

The 25th February 1888.

Statement showing the Results of the Registration of Births and Deaths in the Principal Municipalities in Bengal during the week ending 11th February 1888.

* A special census of the Europeans in the Darjiling Municipality was recently taken, as the census of this section of the community, taken in February 1881, was not reliable owing to the Europeans being at a minimum in that month. The number of the natives remains as before, as it was not necessary to re-census them. The ratios have consequently been calculated on the revised population under all heads in the above table, except "*Age*," the ratios under which have been omitted, inasmuch as the census of the Europeans above alluded to cannot be employed as a basis of calculation owing to the results of the census under this head not having been recorded under the authorised form of age classification.

A. D. MCARTHUR, *Major*, R.E.,
Under-Secretary to the Govt. of Bengal

The 28th February 1888.

PUBLIC WORKS DEPARTMENT—BENGAL.

IRRIGATION BRANCH.

Statement showing heights over mean sea-level and low-water in the Rivers Ganges, Bhagiruthee, Jellinghee, and Brahmapootra, for the month of July 1887.

Date	River Ganges — Mirzapore: Height over zero of gauge	Mirzapore: Height over mean sea-level	Benares: Height over zero of gauge	Benares: Height over mean sea level	Buxar: Height over zero of gauge	Buxar: Height over mean sea-level	Dinapore: Height over zero of gauge	Dinapore: Height over mean sea level	Monghyr: Height over zero of gauge	Monghyr: Height over mean sea level
Distance, Miles	From Allahabad 86.		From Allahabad 134.	From Mirzapore 49.	From Benares 90		From Benares 177	From Buxar 87.	From Benares 287	From Dinapore 111.

Excluding local traffic of the Northern Bengal Kaunia Dharlla and Dacca Railways during 1886

Comparative statement of the principal commodities carried over the Eastern Bengal State Railway during the month of November 1887.

INCREASES

	Tons
Coal	5,012
For railway and flotilla purposes principally	
Cotton piece goods ...	1,466
Despatches to North Bengal and Dacca	
Rice	1,197
Good crops and a favourable market	
Grains .	8,323
Principally from D. K Ghât and Goalundo The season crops have been favourable	
Jute	18,983
Principally from Goalundo, Naraingunj and Serajgunj	
Metals	842
This figure includes manufactures of metals, such as cooking utensils, drinking vessels, &c, for domestic purposes	
Kerosine-oil .	401
Increasing demand for up country consumption.	
Railway plant, &c. ..	4,481
For the Assam-Behar section and repairs and renewals	
Tea	626
Increased cultivation and favourable English market	
Timber	410
For building purposes	
Tobacco	847
From the northern section.	

DECREASE.

	Tons
Firewood	451
Sufficiency of stocks in Calcutta.	

CALCUTTA, *the 27th January* 1888.

INCREASE.

	Tons.
Gunny bags and cloth ...	20

This increase is due to increased grain traffic.

Grain—(2) Rice ...	339

The increase in this commodity is due to greater despatches from intermediate stations owing to good crops this year and greater demands.

(5) Others ...	15

This increase is due to river communication between Azimgunge and Calcutta being stopped for want of sufficient water; the traffic for Jeagunge, &c., is carried by rail.

Metals—(6) Others ...	10

The increase under this head is due to greater demands of bell-metal ware this year.

Provisions.—(3) Others ...	19

The river communication being stopped, the merchants of Azimgunge and Jeagunge bring potatoes by rail this year.

Railway plant and Rolling-stock...	56

This increase is due to greater quantity of railway materials carried this year.

Oilseeds.—(7) Others ...	15

The increase under this head is due to market rate for Bugra and Gooja seeds being fair.

Sugar.—(2) Undrained ...	10

This increase is due to greater demand.

DECREASE.

Coal ...	297

This decrease is due to greater import during previous months.

Cotton, raw ...	22

This decrease is due to dull market rate.

Silk, raw ...	57

This decrease is due to tassar cocoons not having been brought this year.

NALHATI, *the 26th February* 1888. R. G. MOOKERJEE, *Manager, Nalhati State Railway.*

CONTENTS.

Abstract of the Proceedings of the Council of the Lieutenant-Governor of Bengal, assembled for the purpose of making Laws and Regulations under the provisions of the Act of Parliament 24 and 25 Vic., Cap. 67.

The Council met at the Council Chamber on Saturday, the 18th February, 1888, at 11 A.M.

Present:

The HON. SIR STEUART COLVIN BAYLEY, K.C.S.I., C.I.E., Lieutenant-Governor of Bengal, *presiding*.
The HON. G. C. PAUL, C.I.E., Advocate-General of Bengal.
The HON. H. J. REYNOLDS, C.S.I.
The HON. C. P. L. MACAULAY, C.I.E.
The HON. T. T. ALLEN.
The HON. SIR HENRY HARRISON, KT.
The HON. SIR ALFRED CROFT, K.C.I.E.
The HON. MOULVIE ABDUL JUBBAR.
The HON. G. IRVING.
The HON. BABU KALI NATH MITTER.
The HON. DR. MAHENDRA LAL SIRCAR, C.I.E.
The HON. C. H. MOORE.
The HON. DR. GOOROO DAS BANERJEE.

CALCUTTA AND SUBURBAN MUNICIPALITIES AMALGAMATION BILL.

THE HON. SIR HENRY HARRISON moved that the clauses of Chapter II, Part I, of the Bill to consolidate and amend the law relating to the municipal affairs of the Town and Suburbs of Calcutta be further considered for settlement in the form recommended by the Select Committee.

The motion was put to the vote and carried.

The HON. DR. GOOROO DAS BANERJEE moved that in line 3 of section 19, after the words "year 1888-89" the words "on some day, being a public holiday" be inserted. He said:—The object of this amendment is shortly this. The Bill requires that votes at all elections shall be given personally at the polling stations. That being so, unless the elections are held on a public holiday, it will place at a disadvantage a certain large and important class of voters—I mean the educated middle classes, whose occupation is for the most part service. Voters of this class always exercise their privilege of voting with honest independence and discrimination, and they contribute in no small measure to raising the tone of the elections and to the success of the elective system. It is but right, therefore, that their case should deserve some consideration, and the difficulty would be sufficiently met by holding the elections on some public holiday. There are no less than three public holidays about the time that these elections would be held, viz., New Year's Day, Sri Panchami, and Dole Jatra, and any one of these might be selected; or a special holiday might be given for the purpose.

HIS HONOUR THE PRESIDENT said:—I see no objection in substance to the motion before the Council, but I should like to know the effect of giving a special holiday. Would that necessarily mean that the Public Treasury and Banks would be closed, or merely public offices? If it is not intended to be a public holiday under the Negotiable Instruments Act, I have no objection.

The HON. MR. MACAULAY said:—The hon. member forgets that, when the elections under the Bengal Municipalities Act were held, all public offices and courts under the control of the Local Government were closed by executive order. No public holiday was, however, declared under the Negotiable Instruments Act, as the effect would have been to stop the currency of bills of exchange.

The HON. DR. GOOROO DAS BANERJEE said:—I have no objection to withdraw the amendment, as I understand that a public holiday in its more limited sense will be granted as far as the Local Government is concerned.

The motion was accordingly by leave withdrawn.

The HON. DR. GOOROO DAS BANERJEE moved that from the first paragraph of section 19 the portion beginning with the words "until such election shall take effect" to the end of the paragraph be omitted. He said:—The object I had in view when I gave notice of this amendment was to make this section of the Bill consistent with the other provisions of the Bill in the event of the first amendment, of which I gave notice, viz., that no portion of the Suburbs be amalgamated with the Town, being carried. From that point of view this amendment has no object now: but it serves another purpose, and that is this. If this portion of section 19 is left out, some other provision would have to be made for the carrying on of the work of the Corporation between the time of the passing of this Bill into law and the time when the first elections pursuant to its provisions take place. As the provision stands, it authorises the Commissioners, who are in office at the date of the passing of this Bill into law, to continue in office and to carry on municipal work until the new elections take effect. But there are inconveniences in this, one of which I shall notice. Certain portions of the Suburbs will be amalgamated with the Town. These portions have their elected Commissioners, some of whom may reside within the limits of the new Town, others may not. The section says that "this Act shall be read as if the Commissioners elected for those parts of the Suburbs of Calcutta which correspond with Wards 19, 20, 21, 22, 23, 24 and 25, as defined in this Act, and the Commissioners for the Suburbs of Calcutta nominated by Government and resident in Calcutta, were duly

appointed and elected under this Act." So that some of the Commissioners for the Suburbs would be in office, while others would not be in office by reason of not being resident within the limits of the new Town. That is an inconvenience which would be avoided by omitting this portion of the section.

The HON. SIR HENRY HARRISON said:—The amendment of the hon. member is one which raises a point of considerable importance, and one which deserves the best consideration of the Council, because it will closely affect the working of the new Corporation in its initial stage. When section 19 was originally drafted, the hope was entertained that the Act might come into force from the beginning of the next year; and it was deliberately intended that the old Commissioners should work for nearly a year before the new elections took place in order that the difficulties of adjusting the new arrangements might fall into experienced hands, and it was with that object the last portion of this section was framed. But in the meantime the date of the Act coming into force has been thrown back a whole year. This provision of the Bill assumes that the Act would be in force considerably before 31st March. Therefore the question is, do the Council wish to have the new Corporation elected before the Act comes into force, or the Act to come into force first and to be worked for some time by the old body of Commissioners? There are some inconveniences in both proposals: but I think the inconveniences of working with the old body predominate. I do not anticipate any great difficulty from the number of the Commissioners, but there may be considerable difficulty in working Committees, especially the Town Council This body now consists of 30 Commissioners, being one Commissioner for each ward and a due proportion of nominated Commissioners. The Commissioners who might be then members of the Town Council would naturally wish to remain in it, and it would be difficult to reduce it below that number Then again representation must be given to the Suburban Commissioners, and it would be difficult to resist the pressure of individual members to have a Town Council of something like 40 Commissioners, and that would be a very formidable Committee indeed; so that probably there would be some inconvenience in working the Corporation with the joint bodies. The inconvenience arising from the other procedure is, I think, on the whole not so serious. It is mainly this, that we should have to conduct the elections from the Town without having that control over all the registers and statistics which a certain period of working would give us I have very little doubt that the Suburban Commissioners will give us sufficient assistance as far as the owners and occupiers are concerned who are qualified to vote, and with regard to those who hold licenses we ourselves have the requisite information. But there is one class of electors who will not be able to vote at the first elections in that case, viz., those who pay Rs. 24 in the year, for the reason that the voters who will be able to obtain that qualification are chiefly the lower grades of the trades and professions tax payers who will not be in existence in the Suburbs; and therefore a certain appreciable number of residents in the Suburbs, who would have got a vote if the Act had been in force for a year, will not be able to vote at the first elections, and consequently it may be made a matter of complaint that the constituency which elects the first body of Suburban Commissioners will be somewhat smaller than if the Act had been in force for a year. It is just possible that not having the same familiarity with the Suburban as with the Town wards, our machinery will not work as smoothly as regards the Suburban elections as I hope it will with regard to the Town. I beg the Council to consider which of these two alternatives they prefer. If they prefer that the Commissioners should be elected before the new Act is worked, then they should adopt the amendment. In that case nothing more will be needed than in the first section of the Bill to enact that sections 7—34 of the Bill are for the purposes of the election to come into force on a date either to be fixed in the Act or on a date to be fixed by the Local Government, and that the rest of the Act shall come into operation on some other date specified. There will be no difficulty if the Council will declare whether they prefer that the Act should be worked by the joint body as was intended when the Bill was framed, or whether they prefer that the elections shall take place before the Act comes into force. That is the point which the Council has to decide in making up its mind on this amendment.

HIS HONOUR THE PRESIDENT said:—My own idea would be that for the convenience of working it will be better to fix by law, or to allow the Local Government to fix by notification, that from the beginning of the official year next following this the new Municipal Act is to come into force, and to go through the first elections within three months previously to that time. That would be in January or February next. I think the difficulty which the hon. mover of the amendment has pointed out is a real one, and I know not what further difficulties might crop up if the Act is to come into force now, but to be worked by the Town Corporation jointly with the Commissioners of the portions of the Suburbs which will be amalgamated, and with two separate establishments This is merely my own idea, and I do not do more than ask the Council to consider it. The question is which of the two proposals the Council prefers. I shall be glad to accept whichever procedure is preferred.

The HON. BABU KALI NATH MITTER said:—As far as my experience goes, I think it will be better to accept the suggestion of His Honour the President. It would be a better course than to have the affairs of the Municipality carried out by two separate bodies with separate establishments. It would be better for the Act to come into operation on a certain day, and to have the elections three months earlier. There would then be no difficulty in working the Act when it comes into force.

The HON. MR. MACAULAY said:—I do not think we can allow section 19 to remain only with the first clause without any reference to the nominations as well as to the elections. The second clause refers to those elected and appointed. This, however, can be settled when we come to deal with section 1 of the Act.

The HON. SIR HENRY HARRISON pointed out that the word "election" throughout the Act included the appointment of both elected and nominated Commissioners.

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that for the second paragraph of section 19 the following be substituted :—

"All subsequent general elections shall be held at intervals of three years, and shall take effect from the 1st April in the calendar year in which they are so held."

He said:—The object of the amendment is simply to put in the words "general elections" for "elections." As was pointed out by the Commissioner of the Presidency Division, the word "elections" might include "bye-elections." By putting in the words "calendar year," the 1st of April must be held to mean 1st of April 11 months before the general elections (?)

The motion was put to the vote and carried.

The HON MR. IRVING moved that in the proviso of section 19, for the word "fifty" the words "two hundred" be substituted. He said:—For the offence of personation, I think a heavier penalty than Rs. 50 ought to be imposed, and therefore I move that the maximum limit of penalty under the Rules be fixed at Rs. 200. In England the offence of personation is made a misdemeanour. It is true that, when the breach of any rule constitutes a serious offence, the offence might be dealt with under the Penal Code; but I think it is desirable to make an Act complete in itself, especially such an Act as this.

The HON. SIR HENRY HARRISON said:—I have no views one way or the other as to this amendment. The majority of offences under these rules would be of a comparatively trifling character. In the event of any body committing a criminal offence, we shall always have the criminal law to fall back upon. If, however, the Council think it better to raise the penalty to Rs. 200, I have no objection.

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that in the last line of section 20, for the words "an election" the words "each general election" be substituted. He said:—This is a mere verbal amendment with the object of excluding bye-elections.

The motion was put to the vote and carried.

The HON. MR IRVING in moving that at the end of section 20, and at the end of the second paragraph of section 28, respectively, the words "and such list shall be obtainable on payment of a fee not exceeding eight annas" be inserted, said:—It will be to the interest of all classes that these lists should be readily obtainable; on the other hand it may be advisable to check a too wide application for copies, by the imposition of a small fee.

The HON. BABU KALI NATH MITTER said:—I do not think this amendment necessary. It will only have the effect of deterring persons from applying for these lists. It is very necessary that candidates for election should have free access to these lists, but if a fee is imposed it will deter some from applying for them. Hitherto no fee has been imposed.

HIS HONOUR THE PRESIDENT said:—The section requires that the lists shall be published, but if a copy of the list is wanted, I understand the object of the amendment is that it should be paid for.

The HON. SIR HENRY HARRISION said:—Hitherto the practice has been to print these lists and copies of them have been given without any charge to those who apply for them.

The HON. MR. IRVING said:—There might be a very wide and unnecessary call for copies of these lists, and the imposition of a small fee would prevent this. The proposal is that the fee should not exceed 8 annas: it might be 1, 2, or 4 annas.

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that in line 8 of the proviso of section 21, for the word "show" the words "satisfy the Chairman" be substituted. He said:—The difficulty involved by the introduction of the word "show" has been pointed out in the office. The word "show" is ambiguous, and it is considered better to state more clearly what is meant. What is meant is that the person shall produce some *primâ facie* evidence to show that he has paid occupancy rates. This is generally done by the production of rate bills. I think the substitution of the words "satisfy the Chairman" for "show" will be an improvement.

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that in lines 6 and 7 of section 25, for the words "not less than five days before the date of election" the words "not less than five days before the date fixed for the publication of the revised list" be substituted. He said:—This is more than a verbal amendment. It was at first intended that the application under this section should be made five days before the elections, but it has been pointed out by those experienced in working the elections that it would be a great convenience if the bulk of the objections could be got rid of before the publication of the revised list, so that the revised list may, as nearly as possible, correspond with the actual voters. The amendment which I propose will necessitate applications being sent in a good deal earlier. For these reasons I think it will be better that companies, firms and associations of persons should be bound to apply earlier, in order that the revised list may, as far as possible, be correct.

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that in line 8 of section 27, for the words "officers in all cases made over to them" the words "officer in all cases made over to him" be substituted. He said:—This also is a verbal amendment, and the reason for it is that it is more probable that the duty referred to will be entrusted to a single officer, and at any rate the singular will include the plural.

The motion was put to the vote and carried.

The HON. SIR HENRY HARRISON moved that in line 1 of section 31, for the words "the election" the words "general elections" be substituted. He said:—This also is a verbal amendment, similar to one which has already been made on my motion.

The motion was put to the vote and carried.

The Hon. Mr. Irving moved that for the second paragraph of clause (c) of section 32 the following be substituted :—

"In the event of a Commissioner being absent on leave, to be granted by the Commissioners, for a period exceeding three months, and not exceeding twelve months, the Local Government may appoint a substitute to serve in his absence."

He said :—It appears to me that this amendment is a very reasonable one, while at the same time it is urgently required in the interests of Europeans. The present arrangement is defective, owing to the fact that a constituency may often remain unrepresented for a considerable period during the absence of a Commissioner from the country. In such cases, where the temporary vacancies are not filled up, the continuity of representation could only be secured at the cost of a fresh election. As an illustration of the present arrangement, I may mention that in Ward No. 12 not long ago an elected member, owing to missing his steamer, was absent for six and a half months; during his absence the ward was deprived of his representation, and because he was absent a few days over the prescribed period, a fresh election had to be held entailing both trouble and expense. It is to guard against such a state of things that I propose this amendment.

The Hon. Sir Henry Harrison said :—I do not think that the provision contained in this section will work well. How is it to be known that a Commissioner will be absent for a period exceeding three months and not exceeding 12 months. In some cases a Commissioner may intend to be absent for only two months, but may stay away for a longer period ; or he may intend to return in 12 months, but may be detained for 12½ months, and then as soon as the 12 months expire a fresh election must be made. Seeing that one-third of the Corporation will consist of nominated Commissioners, and two-thirds of elected Commissioners, I think there is some objection in principle to all vacancies caused by absence being filled up by the Local Government. There has hitherto been no serious practical inconvenience felt. Every now and then we have been working with one or two Commissioners less than the complete number, in consequence of absentee Commissioners electing not to resign because they expect to return within the six months. In such cases, if an absentee does not wish to resign, then for a period of six months one ward may be without one of its Commissioners, or there may be one less than the full number of nominated Commissioners ; but I cannot say that the existing procedure has caused any practical inconvenience.

The Hon. Mr. Irving said :—Many Europeans go away for six or eight months, and they may wish to take leave of this kind. If the next general elections are near at hand the leave would very likely not be asked for, but if the Commissioners have the power of granting leave when it might easily be given, it would be a convenience, more especially for European Commissioners.

The Hon. Sir Henry Harrison said :—I think the amendment cannot be substituted for the clause in the Bill, which is a disqualifying clause. It may, however, be substituted for the specific clause which provides that no Commissioner shall be disqualified by reason of his being absent for a certain period.

His Honour the President said :—I see a difficulty in accepting the amendment as it stands, though I do not see much objection to its principle. The amendment gives the Commissioners power to grant leave or not as they choose. If they do not want a nominated Commissioner, they will not grant the leave, and they will have it in their power to prevent the Local Government from nominating a *locum tenens*. The difficulty consists in there being no alternative in cases where the Commissioners refuse to grant leave.

The Hon. Mr Irving said :—I think it desirable that the Commissioners should have power to grant or withhold leave of this kind. Suppose a Commissioner finds it necessary to go away shortly after the elections: he very probably would wish to keep his seat, and the Commissioners would surely grant the leave. If, however, the absence occurs close to the period of the elections, leave would hardly be necessary.

The HON. SIR HENRY HARRISON said :—Then I think the period of absence without leave should be very considerably reduced—say to two months. If Commissioners can obtain leave, then I think it desirable to require them to obtain leave for all prolonged absences, at any rate for three months.

The HON. BABU KALI NATH MITTER said :—I suppose the effect will be that during the time the leave extends the nominated Commissioner will be only a substitute, and when the Commissioner comes back he will take up his own place, and the nominated Commissioner will retire. So that instead of having an elected Commissioner, you would have the services of a nominated Commissioner for that time. If a Commissioner goes away for six months or twelve months, would it not be better to leave his successor to work till the end of the term instead of only during his absence? The gentleman who may be nominated would acquire experience, and by the time his experience becomes valuable, he will be superseded by the Commissioner who comes back. I do not think the amendment to be a desirable one.

The motion was put to the vote and negatived.

The HON. BABU KALI NATH MITTER moved that in clause (3) of section 36 the words "construction and" be omitted. He said :—The expenditure of funds for the construction of hospitals is a new power which it is proposed to give to the Commissioners. The power in itself is unobjectionable, but the question is whether the means at the disposal of the Commissioners will be such as to enable them to exercise it. This provision of the law may be thrown at their teeth, and it may be said that they are not performing their duty, inasmuch as they are not exercising his power. I submit that no necessity has arisen for adding this to the powers conferred by the existing law.

The HON. SIR HENRY HARRISON said :—I entirely sympathise with the main part of the hon. member's objection, that it is very undesirable that an additional charge should be thrown on the Corporation, looking to the work they will have to do in the newly amalgamated area. But the reason why this additional power should be conferred is because it is necessary on some occasions that hospitals should be provided for the treatment of small-pox and other contagious diseases. On such occasions it may become necessary to run up temporary hospitals for isolating those affected with the disease. That certainly has been done at Bombay; but we have not the power here to construct hospitals; we have only the power of maintenance. I think this is a flaw in the present Act, though I hope very much that the Commissioners will not be involved in any heavy expenses on account of construction.

The HON DR. MAHENDRA LAL SIRCAR said :—For the reasons which have been mentioned by the hon member in charge of the Bill, and to meet such occasions of emergency as have been referred to by him, I move an amendment that after the word "construction" the words "hospitals for contagious diseases which if unchecked, might prove epidemic" be added. This will limit the power to a considerable extent.

The HON. BABU KALI NATH MITTER accepted the amendment.

The HON. MR. MACAULAY questioned if the word "maintenance" would cover the erection of additional buildings to hospitals. He did not think that the power of the Municipality should be restricted to hospitals for epidemic diseases and objected to the amendment as limiting the power of the Municipality with regard to what is very useful work.

The HON. SIR HENRY HARRISON said :—I am bound to confess that if, for instance, the Medical College Hospital had not been built, and very heavy expenditure had to be incurred for the purpose of building a hospital, considerable pressure might be put upon the Commissioners to contribute to its construction; and I should be very sorry to see expenditure incurred on such an account. At the same time I think it absolutely necessary that the Commissioners should have the power to construct temporary hospitals on emergencies.

The HON. DR. GOOROO DAS BANERJEE suggested the addition after the word "construction" of the words "in cases of emergency."

The Hon. Mr. Macaulay pointed out that in the Mofussil Municipal Act, III of 1884, the words used were "establishment and maintenance of hospitals." This is a power generally used throughout the Province.

His Honour the President said:—My own view certainly is that the section as it stands in the Bill should remain, and mainly for this reason, that, apart from the present state of the finances, the construction of hospitals is certainly work which is elsewhere only generally considered as a proper duty for a Municipality to undertake. The objection to the Hon. Dr. Mahendra Lal Sircar's amendment is that the Commissioners may be called upon to prove that a particular disease, if unchecked, would prove epidemic.

The clause as it stood in the Bill with the words "construction and" was then put to the vote and carried.

The Hon. Babu Kali Nath Mitter moved that in clause (11) of the same section after the word "ceremony" the words "for illuminations, fireworks or the presentation of addresses" be inserted; and that the words "or entertainment in Calcutta" be omitted. He said:—My object is that the cost of "entertainments" should not be defrayed out of the Municipal Fund If it should at any-time become desirable to give a public entertainment, the Commissioners can always give it at their own expense. On some occasions, when the Commissioners were prepared to entertain certain eminent individuals at their own expense, the individuals proposed to be entertained objected. If such an entertainment is desirable on any occasion, there will be no difficulty to find the ways and means But if such a provision be inserted in the Act, there will be frequent applications for such entertainments, and a good deal of money may be expended for purposes of this kind. On all public occasions, money has been contributed by the Municipality for illuminations and the like. Although there has been no distinct provision of law for that purpose, yet the Corporation, under the belief that no objection would be raised, has spent money for such purposes Therefore, as far as such purposes are concerned, there will be no objection; but to carry it further will, in my opinion, be objectionable.

The motion was put to the vote and negatived.

The Hon. Dr. Gooroo Das Banerjee moved that after clause (11) of section 36 the following new clause be inserted:—

"(12) Promotion of primary and technical education."

He said:—Section 36 specifies several purposes to which the municipal fund may be appropriated, but one most important purpose has been altogether omitted, I mean education, and the object of this amendment has been to supply that omission. I know it may be said that education is an Imperial purpose, and that the expense for education ought to come out of Imperial and not from municipal funds. Perhaps that may be true as far as high education is concerned, but whether it is so or not it is not my object to discuss. It is a proposition which may be discussed on the amendment of the Hon. Sir Alfred Croft which is on the paper. I venture to think that ignorance and poverty are the main causes of those great sanitary evils which the municipal administration has to cope with, and that the best municipal arrangements from outside will fail to secure the desired object so long as the people are immersed in the depths of ignorance and poverty. You may improve bustees and have more efficient conservancy and other arrangements, but you will fail to restore the health of the inhabitants if they themselves are ignorant of the most elementary principles of sanitation. By spending a small part of the municipal funds for the promotion of technical education, we may help the children of the poor to enable them to learn useful occupations, and thus earn their livelihood; and by spending another small portion of those funds for the promotion of primary education, we may educate them just enough to enable them to read some of those excellent sanitary primers in the vernacular languages. Such expenditure is sure to prove remunerative in the sense that you would thereby secure from the people so educated an amount of willing obedience to your sanitary regulations which may perhaps enable you to dispense with a part of the establishment for enforcing those regulations. Nor is that all. We find in the Mofussil Municipal Act, III of 1884,

section 69, clause 5, that the construction and repair of school-houses, and the establishment and maintenance of schools either wholly or by means of grants-in-aid, forms one of the purposes to which municipal funds may be appropriated; and if the municipalities in the mofussil can afford to expend money on such objects, there is no reason why the Metropolitan Municipality should grudge to do the same.

There is another point of view from which the matter may be considered. The Bill proposes to amalgamate a large part of the suburban area with the town. Now the Suburbs already enjoy this advantage. There are schools in the suburban area which already get grants from the suburban municipal funds, limited as they are; and now that these areas are to be amalgamated with the town, it will be disappointing expectations and disregarding vested interests if you suddenly deprive them of the aid they now receive.

I may also point out that in other countries, which we always do well to imitate, municipal funds are largely spent on education. From an abstract which I hold in my hand of the report of the Local Government Board in England for 1880, I find that, whereas two millions sterling were expended on highways, nearly four millions were spent on elementary education. I therefore submit that for the limited purpose of elementary and technical education the Calcutta Municipality ought to contribute something.

The Hon. Sir Alfred Croft moved that after clause (11) of section 36 the following new clause be inserted:—

"(12) Maintenance, support and inspection of schools, including technical schools"

He said:—There is an important difference between the amendment which I have the honour to move and that which has just been moved. By my amendment the duty of the municipality is not limited to the provision of technical and primary education. It imposes no limit of that kind so far as schools are concerned, but allows the municipality to apply its funds to education whether primary or secondary, whether technical or general. It allows the municipality, first, to establish schools of its own; secondly to support schools, that is to say, to give grants-in-aid to the support of schools maintained by private individuals or by other public bodies; and lastly to inspect schools, where necessary. I do not propose to dwell on the general principles on which the duty of municipalities to provide for education may be defended, nor will I do more than just glance at the very pronounced view of the duties of municipalities in this respect which prevails in England and on the continent of Europe. I need not go so far afield as that. I shall find quite sufficient material for my remarks within the continent of India. The objections which have been raised to the inclusion of education amongst the objects on which municipal funds can be spent are, as far as I have been able to ascertain them, two. They are, first, that education is no concern of an Indian municipality; that if education is to be provided within a municipality it should be provided by the State or by associations of private persons; and the second ground is that in the particular case of Calcutta, where the sanitary requirements of the people are so urgent, it would be unjust to divert any portion of the municipal funds from the objects for which they are so urgently required, to a purpose of less importance such as education. First, then, as to the general principle. When it is said that a municipality as such has no concern with education, that is to me so novel a view that I hope I may be pardoned if I occupy the time of the Council a little in order to show how exceptional that view is, and how much at variance with the common opinion and almost the universal practice in India. This is a point to which the Education Commission which sat in 1882-83 paid a great deal of attention. They took for granted—and in that assumption they were justified by the common practice of municipalities in India—that it is the business of municipalities to take charge of education. They said:—"The obvious advantage of connecting the education of the masses with local popular organisation has long been recognised," and they proceed to state the extent to which municipalities in India have recognised this principle. The figures they give are somewhat surprising. In 1882 the municipalities in the Punjab spent Rs. 1,51,000 on education; Madras spent Rs 88,000; Bombay Rs. 80,000; the North-Western Provinces Rs. 52,000; the Central Provinces Rs. 35,000; while Bengal comes last with Rs. 25,000. Then,

again, when we turn to percentages, we find that the Bombay municipalities expended 5·6 per cent. of their total income; Madras 3·8 per cent., and so on until we come down to the municipalities in Bengal, with less than half per cent. As regards Bengal, that proportion is confined to mofussil municipalities, because in Calcutta not one penny is spent on education. On this point the Education Commission remarked:—"In no other province of India do municipal bodies exhibit greater indifference to the claims of education upon the town funds. Even in the city of Calcutta no steps have been taken in this direction, though so far back as 1873 Sir George Campbell expressed a hope that the municipality in Calcutta would move the Legislature to permit the expenditure of some part of its large income upon primary schools for the children of the Calcutta poor." The Commission, I may add, went even further. Reviewing the progress of education in the past, they strongly recommended that the educational sections of the new Municipal Bills, then before the different Legislative Councils, should no longer be permissive, but compulsory. They said that executive orders of clear import and general application issued from 1854 to the present time had failed more or less in all provinces to ensure uniform attention to broad principles prescribed for general guidance; and they added:—"The evidence given before the Commission affords proof of the unanimous conviction entertained in all provinces of India, that the time has come when the exercise of these permissive powers can no longer be left to the discretion of municipal bodies." That view, however, has not generally commended itself to the local Legislatures. In more than one province it is true that under recent legislation the educational clauses of the Municipal Acts are not permissive but compulsory; or else power is taken by the Local Government to decide what proportion of the total municipal income should be devoted to education. But in general the Local Governments have, with one or two exceptions, expressed reluctance to compel those bodies, by executive order, to devote a certain minimum share of their income to education; and while they have not hesitated to express their wishes and expectations in the matter, they have for the most part been content to leave the municipalities concerned to fix the amount of their educational grants, in the full belief that the Boards would of their own motion make adequate provision for the maintenance of schools, and that a policy of compulsion was neither necessary nor desirable. But the general principle was fully accepted both by the Government of India and by the Secretary of State. The Government of India, in reviewing the report of the Education Commission, plainly stated that it was the duty of municipalities to provide for education. They said:—"Under all the Acts for settling the conditions of Local Self-Government in municipalities, provision more or less complete has been made for education;" and they went on to show that the Bengal Government anticipated a contribution of Rs. 1,25,000, for educational purposes from the municipalities of the province, excluding Calcutta.

Such then being the state of current opinion on the subject, it is important to show how far this general opinion, that municipalities should concern themselves with education, has been embodied in legislative enactments. In the District Municipal Act of Bombay I find, amongst the objects to which the municipal fund may be devoted, that adequate provision *must* be made, not *may* be made, for middle and primary schools, and that adequate provision *may* be made for higher schools. And then the Local Government takes power to define what an adequate provision is; and to ensure that the provision shall be adequate by declaring the minimum sum which municipalities are required to spend upon education. Then in Madras, district municipalities are required to provide for all primary and lower secondary schools within the municipal area. These are the provisions for district municipalities. Next I will take the Presidency towns. In Bombay, the Municipal Bill is still under consideration, and it is impossible to say what form the educational sections will take. I understand that they are not likely to depart far from the provisions of the existing Act. The Act of 1872, by which the Bombay Municipality is still governed, is not compulsory but permissive. It allows the municipal fund to be devoted to education of all grades, without any restriction to primary education. So again, in the town of Madras the municipality is required to provide for the elementary education of the poor, and to build school-houses in which such

education may be given. In the Punjáb, as in Bombay, the provision is not merely permissive, for the Local Government has power to fix the share of the municipal income which must be assigned for educational purposes What I have stated is merely a sample of what is going on throughout India. It is true that in Bengal, and especially in Calcutta, the idea of municipalities taking an active share in education is a little strange to us; but I hope I have shown that throughout the rest of India the duty of municipalities to control education, and not merely primary education, is an accepted principle. I will now go on for four or five years, and show that outside Bengal, and even within Bengal, municipalities have within that period not stood still. I find that from 1881 82 to 1885-86, the municipal expenditure on education throughout India increased from Rs 4,66,000 to Rs. 11,40,000, of which Rs. 4,22,000 were devoted to secondary schools, and Rs. 4,86,000 to primary schools, Rs 27,000 to special or technical education, Rs. 2,04,000 to inspection, school buildings, and other miscellaneous objects. In the Punjab, which stood at the head of all the provinces of India in 1881-82, the educational grant remained stationary, at about 1½ lakhs of rupees. Bombay advanced from Rs. 80,000 to Rs 1,71,000, Madras from Rs. 88,000 to Rs. 1,75,000; while the municipal expenditure on education in Burmah advanced from Rs 33,000 to Rs. 2,53,000—the reason being that in Burmah large grants had been made to municipalities to enable them to carry on the whole educational system within the municipal area. It was declared to be the duty of municipalities in Burmah to undertake the management of education within that area, and special sources of income were transferred to them to enable them to do so. Even in the mofussil municipalities of Bengal, the educational expenditure rose from Rs. 25,000 to Rs. 82,000. The remarkable expansion to which I have just referred is due in great measure to action taken about this time by the Government of India. In 1881-82 the Government of India decided to relieve municipalities of all charges on account of the police, and to transfer to them the control of certain services which were held to be more within their province, such as sanitation, education, and public works. The transfer of funds to these objects was accordingly carried out in every province of India, and that accounts in a large measure, though not entirely, for the increase of expenditure on education. In Bengal it was hoped that the municipal expenditure on education would amount to Rs. 1,25,000 It has not yet reached that figure, but in many other provinces it has gone far beyond the requirements imposed on municipalities by the change to which I have referred In Madras, for example, under instructions issued by the Madras Government, municipalities are expected and required to expend one-sixth of their total income on education.

So much for the general question; but I am bound to say that the particular case of Calcutta is in some respects an exceptional one. The sanitary requirements of Calcutta, it is said, are such that they will exhaust and swallow up the whole of the addition of three or four lakhs which is to be made to its revenues by the removal of the cost of the police I do not know whether the terms upon which the Government makes over that grant to the municipality are such as to compel the money to be spent on sanitation alone, or whether, as in the case of every other municipality to which similar relief has been afforded, sanitation is only one of those objects, education being another. But however that may be, on the general question I cannot say that Calcutta stands in any different position from other large towns in India with regard to education We have here in Calcutta 22,000 boys at schools of all classes, primary and secondary; but according to our estimate 22,000 is only about half the number of boys that should be at school. It follows that there are about 20,000 boys who get no education at all, not even the rudiments of education. To my mind it seems a matter beyond dispute that Calcutta, as a manufacturing and industrial town, would be the gainer by the education of these 20,000 boys—not merely in the way mentioned by the last speaker that they would be more amenable to sanitary influences, but that education will make them more intelligent citizens, and therefore more useful, and profitable to the town in which they live. That is the simple ground on which municipalities have thought it worth while to spend money on education

All this of course refers to primary education. As to technical education, there is in or near Calcutta a School of Art and an Engineering College. The

School of Art has, I believe, a great future before it in the development of artistic industries. The engineering college has established such a position and attained such success that the trained apprentices find no difficulty in getting profitable employment all over Bengal. But when boys go to one or other of these institutions they do not even know the rudiments of drawing. They have to learn it from the beginning, and to spend a long time in acquiring that moderate amount of skill which they ought to have already acquired upon entering the school. It appears to me that if drawing classes were established by the municipality, they would do most useful work quite within its province, for the municipality ought not to be indifferent to the development of artistic and industrial skill. Technical schools might in the same way be attached, with great advantage, to the municipal workshops, in order to increase the supply of skilled artisans This is a crying want, and amply justifies the devotion of municipal funds to technical education. I may mention that in Bombay the municipality contributed Rs. 80,000 to the establishment of a Jubilee Technical Institute, and have made an annual provision of Rs. 5,000 for the same purpose In Poona the municipality gave Rs. 5,000 to a technical school.

As to secondary education, throughout Bengal and India large sums are expended by the municipalities. In different parts of the mofussil it is felt that the municipalities contain members thoroughly qualified to control education of that kind. They have accepted and managed with the greatest success the secondary schools which have been transferred to them in pursuance of the Local Self-Government policy. This has been done to a very large extent in the mofussil municipalities of Madras, Bombay and the North-Western Provinces. In the great Presidency towns like Calcutta the case is no doubt different. Here private enterprise is so strong that it never will be necessary to spend any large sums on secondary education. At the same time it might very well happen that the Government, on retiring from one of its secondary schools, might make an offer to the municipality to take it over with its grant. If so, there seems no reason why the municipality should refuse to undertake the charge—a charge which would generally involve no additional burden on the municipal fund. Then again, suppose the municipality maintains good primary schools, such as those which are the credit and the pride of Bombay—primary schools attended by hundreds of poor children, who thus secure a far better and sounder education of an elementary kind than private effort can give them. If there are such schools, the municipality might perhaps desire to add secondary classes for the further education of advanced scholars, and if so, I do not think it is the business of this Council to refuse it that permission. It may be taken for granted that the permission will not be misused, as it has not been misused in other Presidency towns in India, where, though they spend large sums on primary education, the expenditure on secondary schools is trifling. In view of the position which the municipality of the metropolis of India has a right to claim, we may very well say—It is open to you to establish, without interference from us, a complete system of education according to your view of what is necessary and sufficient, after other and more important requirements have been met. Of that, the municipality must be the best judge. The clause which I propose to introduce is not a compulsory one, as it is in Bombay, Burmah, and the Punjab. All that we propose to say is that, you *may*, if you see fit, spend a certain sum upon education; primary and technical education in the first instance; secondary education if you think it necessary. I confess that I do not see how the claim can reasonably be refused. We have this simple fact, that in all the rest of India municipalities do undertake the control and support of education, and do not limit it to primary education. If that is right for other municipalities, it is right also for Calcutta. If it is wrong in Calcutta, then you declare that the policy followed in every municipality in India is wrong. It seems to me that the burden of proof lies on those who deny that the municipality of Calcutta is qualified to exercise powers which are conferred on and exercised by every other municipality in India.

The HON SIR HENRY HARRISON said:—As regards the amendment of the Hon. Dr. Gooroo Das Banerjee, I dare say the majority of the Council are aware that the original Bill contained a provision for sanctioning expenditure on primary education. The reason was that we found that in the Suburbs such

expenditure was actually being incurred, there being a grant of Rs. 3,000 for the purpose. We thought it would be invidious to deprive the Suburbs of what they had hitherto received, the intention being merely that their rights should be preserved to them, while at the same time it was foreseen that the words might be capable of extension to other primary schools. And after the fullest consideration I am constrained to say that so strong a case has been made out on behalf of primary education that I cannot go against this amendment. I myself feel bound, seeing the weight of precedent and reason adduced for it, to vote so far as to put in a provision allowing the municipality to provide for primary education and technical education.

Then I come to my hon. friend Sir Alfred Croft's amendment, and here I find myself in a position of very great difficulty, because on the one hand I look on the amendment with the greatest possible apprehension, on the other hand I am equally bound to say that he has made a very strong case indeed; but the stronger the case the stronger is my apprehension. I feel that the case made out is so strong that it will be very difficult for me to induce the Council to reject the amendment. I am equally bound to admit that, so far as the precedent and practice of Bombay and other municipalities are concerned, they are all against me. In the Bombay draft Bill, which has passed the Select Committee, expenditure upon primary education is made compulsory, while as regards secondary education it is optional. In Bengal under the Municipal Act mofussil municipalities can spend money on education in giving grants-in-aid to schools and in various other ways. So that, except so far as our own Act is concerned, we have to face the contrary practice all round, and my hon. friend Sir Alfred Croft is justified in saying that the onus lies on us to disprove the propriety of adopting his amendment. Nevertheless that is which I am bound to attempt. My hon. friend referred to two arguments which might bear specially against his proposal. One is that the proposal is against the weight of practice or precedent elsewhere. That argument cannot be met because he proved successfully that both practice and precedent are against us. He also referred to the argument that heavy expenditure is required for the sanitation of Calcutta and the Suburbs, and that is the only argument I feel bound to press upon the consideration of the Council. The first point to recollect is that municipalities in India are essentially poor bodies; the municipalities of Calcutta and Bombay are by far the richest in India, but yet their means cannot compare with the means at the disposal of civilised municipalities elsewhere. Calcutta has to levy its taxation almost entirely by rates on property, and the assessable value of property in Calcutta does not exceed £1,200,000 a year. It is considerably less than one-twentieth of the rateable value of London, and the population of that city is only seven times larger. It is less than one-tenth of New York with a population twice as large It is less than one-fourth of Philadelphia with a population only slightly larger: so that the Calcutta Municipality cannot command anything like the funds of other large cities. But when we come to the question of expenditure, then we find that sanitation in Calcutta attains such importance that, so far from the expenditure being less, expenditure quite on the same scale as in English cities becomes obligatory. We are to have a large area in the most insanitary condition added immediately to the town. Nobody would say that the town itself is in anything like a satisfactory sanitary condition. The difficulty in adding the suburban area has been simply and solely this, that no one could suggest the sources from which the funds should come. The Amalgamation Committee was distinctly of opinion that about six lakhs ought to be added to the funds of the municipality from some source. I myself formed a more sanguine estimate, and leaned to the opinion that probably four lakhs may suffice. I took a more sanguine estimate than any other member of the Committee. Can any one in this Council doubt that as soon as the suburban area is added to the town we shall have the fullest possible use for all the funds at the disposal of the municipality? I admit that education is a legitimate subject of municipal expenditure, but I also maintain that it is a secondary object. It is not to be put on the same plane as the primary objects, such as the repair of roads, the removal of refuse, cleansing, sewering, supplying water, and in one general word "sanitation." If education is to supplant any of these objects, would it be right? I put it to the Council whether if Rs. 50,000

be taken from the purposes of sanitation and given to education, it would not be a mistake. That is a point on which I am so satisfied that I must press this view on the attention of the Council. I am far from sanguine that the effect of this amendment would be that only a small sum will be expended upon secondary education, but so far from that being likely, I feel it most probable that the expenditure under this head would soon be large. The people of Calcutta have a strong, natural and proper sympathy for high education, and the municipal body being in itself extremely sympathetic with educational institutions, we should have siege laid to our funds by perhaps the most experienced and skilful body that you could find to conduct such a siege succesfully, namely, the large body of educationists in Calcutta who so much deserve and command the appreciation of the public; and the very fact of their appealing for help would go far to secure it. In the first instance some institution of an extremely beneficial character, and which met a recognised want, would probably come forward and would almost certainly succeed in getting a grant. One precedent having broken the ice, others would come in on the same ground, and before long—I appeal to hon. members who can judge of these matters—the educational budget would be a very ample one indeed While that would be the case on the one hand, is there any reason to suppose that the natural and laudable desire of the rate-payers to keep taxation at its lowest limit would be diminished? While money would be granted freely for educational purposes, the temptation would be almost irresistible to effect economies in other directions in order to balance for the grant given to education It is but fair to admit that my argument goes beyond the case of Calcutta. I admit that it equally applies to other municipalities in India. But strong as is the case which has been made out in other ways, my hon. friend has on this point given me considerable assistance, because he has shown that there is no head of expenditure which has so rapidly increased with municipalities as education. He showed that the educational grant had grown from four lakhs to eleven lakhs in a short time. That is exactly what I should have expected. There is no object of expenditure which is likely to develop more rapidly The one head which would soon grow with the greatest rapidity would be education. But as regards the circumstances of educational expenditure in other countries, there is considerable difference In England, education is placed under special School boards under the Act of 1870, and these School Boards fix their own expenditure, and they spend it. But it is obvious that Local Sanitary Boards or Municipalities, which are totally distinct bodies, are not deterred from spending money on sanitation because other distinct bodies are spending money on other objects. But in our case we should have the same body which is spending money on education—the body which has to judge of sanitary requirements—and there would be an inevitable tendency to substitute one class of expenditure for the other. Then again the difficulty with regard to each community in Calcutta would be very serious Calcutta is not composed of one homogeneous community, whereas you have in mofussil municipalities a more or less homogeneous population, where there are Hindus or Mahomedans, or Hindus and Mahomedans. But here we would have classes of expenditure fundamentally different, which would come before the Municipal Commissioners. We have large schools of the European and Eurasian element which would appeal for support, and large schools of the native communities. A great many of these are no doubt self-supporting. Secondary education in Calcutta can be made self-supporting, and that is a strong reason why aid is not necessary for this class of schools But it would be a very serious task for the Corporation to do justice between all the communities which would appeal to it for aid.

Lastly, there is this special difficulty that it is a fundamental principle which has been laid down by the Government of India that, as a rule, money should only be expended by municipalities on objects which are under municipal control; but although the amendment includes cases in which the municipality might have such control, it allows the municipality to make grants to any schools in behalf of which sufficiently strong pressure is brought to bear upon it, without there being any control at all. If a municipality cares to spend money on education, I think it extremely important that they should themselves exercise a control over its expenditure, and I would suggest that we ought to introduce some provisions for constituting Local School Boards and for the imposition of a special

educational rate, because the present rates have been certainly fixed with a view to the requirements of the town without taking into account any expenditure on education, and if such expenditure is to be added, I certainly think that power should be given to levy an educational rate.

For these reasons I think it extremely important that the Council should not introduce into Calcutta the principle of applying municipal funds for the purposes of higher education

The HON. DR. MAHENDRA LAL SIRCAR said:—After the exhaustive speech of the last hon. speaker, conclusively disposing of the arguments of the hon. mover of the amendment, it would be superfluous for me to say much. I would simply ask the Council from what fund it is contemplated to provide for the maintenance, support and inspection of schools, and the maintenance of free libraries. It must be from what is known as the General Fund; and I would ask if anything of that fund would remain after it had been exhausted by the very comprehensive items of expenditure which had to be provided for out of that fund. Unless, therefore, it is intended to impose a new rate—an education rate—it will be found extremely difficult in practice to divert any portion of the Municipal Fund towards such purposes which, in my humble opinion, has no direct connection with the public health, safety and convenience. Impose an education rate, and then we shall know what portion of the Municipal Fund to appropriate to educational purposes. But unless you do so, to expend any portion of the municipal revenues upon education will simply be a fraud upon the rate-payers. With all my love for education, I have not been able to persuade myself that the provision of education forms a part of municipal duty. The arguments brought forward in favour of it might as well justify the municipality to maintain an army, a body of volunteers, Hindu temples, Mahomedan Masjids, Christian Churches. If you once adopt the principle of providing from the municipal fund for the maintenance, support, and inspection of schools, there would be no limit to the expenditure. Already there are a very large number of schools, and I hope the number will be multiplied a hundredfold. Would your municipal fund suffice for the provision of all these schools? The community of Calcutta is a heterogeneous community, and the question of nationality and race will most unpleasantly spring up. You will have Hindus and Mahomedans and Christians all clamouring for support of their schools from the municipal fund. Would the Commissioners be able to meet all this clamour? If you can impose an education rate, by all means have such a fund and declare the purposes to which it should be applied, but not otherwise.

The HON. THE ADVOCATE-GENERAL said:—As I intend to vote against this amendment, I consider it necessary to say a few words lest my silent vote should be supposed to indicate that I do not sufficiently appreciate the arguments which the Hon Sir Alfred Croft has adduced in favour of the advantages of education, or that I am opposed to the general views he has expressed. If I could approach the subject of this discussion with the fact that the municipal funds of this town were unencumbered and in a flourishing condition, and with the assurance that the money which would be raised would be more than sufficient to supply all the wants of the town in respect of its sanitation, I would consider the present a proper time for discussing the question raised. Unless we are satisfied that the requirements of the municipality can be met in this respect, we are not in a position to introduce another subject of expenditure. Therefore, I do not intend to consider or discuss the question whether, strictly speaking, municipal institutions are concerned in education or not, nor even the merits of the smaller proposition put forward by the Hon. Dr. Gooroo Das Banerjee in reference to the larger measure advocated by the Hon. Sir Alfred Croft; I wish to impress upon the Council that the time has not arrived for these amendments. If I were perfectly satisfied that the funds now in hand were not all required for sanitary purposes in particular parts of the town of Calcutta, then, as I said before, the question would arise. So long as the Municipal Funds are urgently required for sanitary and other purposes, I would protest against enlarging the area of the subjects to which they might be applied. I would not enlarge it beyond the purposes stated in section 36 of the Bill.

And here I would point out a little discrepancy between section 36 and the amendments proposed to be introduced into it. Section 36 says—"The purposes expressly authorized by this Act shall be held to include the objects connected with the public safety, health and convenience hereinafter specified," that is to say—expenditure on account of certain purposes detailed in clauses (1) to (11) of the section. To these the Hon. Sir Alfred Croft would add "the maintenance, support and inspection of schools, including technical schools, and the provision of free libraries" as a twelfth subject of expenditure. This clause would be governed, as the whole of the other clauses are, by that which preceded them, viz., by objects connected with public safety, health or convenience. I assert none of these heads comprehends education and free libraries. The Hon. Dr. Gooroo Das Banerjee, who is a learned lawyer, perceiving very clearly that unless he could in some way associate this educational purpose with sanitation, or some one of the purposes of the section, ingeniously connected it with sanitation. He said that if you give the people education you purify their hearts, their thoughts and their manners, and you will consequently be able to reduce your expenses of sanitation and your establishments, and in due course of time less expenditure will be required for sanitation. But that is after all an indirect means of aiding sanitation. I think if he is entitled to use the argument to which I have just adverted, I am equally entitled to answer it by saying if you are justified in incurring expenditure in purifying the hearts and minds of the people, why not enable them to purify and cleanse their bodies by the help of soap purchased out of Municipal Funds and distributed gratuitously in large quantities, and thus aid the scheme of sanitation by an indirect means as potent as that advocated by Dr. Gooroo Das. I must not be supposed to complain of the argument used; I would merely point out that, unless ingenuity was brought to bear on the subject and used to afford some support to the position that education must be placed by the side of sanitation, the motion must fail. I think I have said sufficient to expose the fallacy of the argument, and I earnestly ask the Council that unless sufficient provision can be made for the necessary purposes of sanitation, we should not think of opening out new sources of expenditure for which, as the hon. member in charge of the Bill had told the Council, there would be numerous claimants. For a time it may be that this provision will merely be a permissive one. The municipal body is a large body with an experienced Chairman at its head. He may lead them in most cases rightly; but it may happen that members of the Municipality, holding the views of the hon. movers of these amendments, may insist upon education being provided out of Municipal Funds and succeed in over-ruling their opponents: in such a case there would be a grave responsibility incurred if the Municipal Funds be diverted from their legitimate objects of expenditure. Under these circumstances, I shall oppose these amendments.

The Hon. Babu Kali Nath Mitter said:—From the amendment which I moved on this section it will be quite evident that I am seriously alarmed at the prospect of expenditure which the Commissioners will not have the means to meet. I objected to "entertainments" because of its being a source of expenditure, and secondary education is thrown upon the municipality. I certainly think that the expenditure on such an object would be enormous, and that the Commissioners will not be able to resist the temptation of spending money under this head: the cry for help will be so great that it will be impossible to resist it. When this matter was discussed by the Commissioners, though one party was violently opposed to the introduction into the Bill of education as one of the objects of expenditure, because the funds at disposal would not enable them to spend money on education, another party, equally strong, thought that at any rate primary education should be provided for. Ultimately the latter prevailed, and the resolution that was passed was that, so far as primary education was concerned, some provision ought to be made. As has been very justly pointed out by the hon. mover of the first amendment, that at the present time some of the schools which exist in the area going to be added do receive some contribution from the Suburban Commissioners, it was thought proper at one time to provide for them, and no further. To that limited extent I am quite prepared

to support the hon. member, because I think it right that the schools which at present enjoy a contribution should continue to enjoy it. But beyond that I am not prepared to go. The prospects of the future municipality seem to me to be gloomy. Powers are being given to them in the exercise of which it will be necessary to have large sums at their disposal; but as far as I have been able to see, those funds are not available. That being so, I regret I cannot agree to the amendment of my hon. friend Sir Alfred Croft.

The Hon. Dr. Gooroo Das Banerjee in reply said:—One of my hon. colleagues has been pleased to observe that the diverting of any portion of the municipal fund to purposes of education will be a fraud upon the rate-payers, unless they are previously told that part of the taxes they are paying will be devoted to that purpose, and unless an education rate is levied. We know that, in the suburban area at any rate, it can by no means be open to such remarks, because we have such provision made in the Act in force there. Therefore I take it that the strong language in which my hon. friend has criticised this amendment is after all a matter of rhetoric and eloquence with a large measure of which Nature has blessed him. But the ground upon which I based the amendment was that it would be a matter of disappointment to expectations and vested interests to deprive the suburban schools, which already enjoy such contributions, from their benefit after the passing of this new law.

Then with reference to the remarks of the hon. the Advocate-General, he observed that the time had not arrived for the appropriation of any part of the municipal fund to purposes of education. I freely confess that I feel the force of his observations and those of the Hon. the Chairman of the Corporation, that for some time to come the municipal fund will be sufficiently taxed by new burden thrown upon it. But still I cannot persuade myself that the provision of a small contribution which the limited scope of my amendment will necessitate will be anything but remunerative. I am sorry I have not been able to place in the hands of the Advocate-General some of those simple sanitary primers in Bengali which ought I think to be scattered among the poor population of Calcutta. I may be a little enthusiastic in my admiration of these little books, and of the importance of primary education in securing free and willing obedience to our municipal regulations on the part of the people. But I am not singular in my expectations, for such expenditure has in other places been regarded as remunerative. The small extent to which the municipal funds will be taxed will be more than returned—if not immediately, certainly in the course of a few years.

His Honour the President said:—I think I ought to make a few remarks before putting this question to the vote. I confess that the turn which the debate has taken on this point has rather disappointed me. I have always been told that the municipality, under the guidance of its admirable Chairman, had really been doing very good and very great work during the last fifteen years. I had been led to suppose that they were capable of expending their funds with something like reason, and that really they might be left to themselves in those matters. Again I have been informed on the best authority that though they loved education, yet they also loved sanitation, and that they were most eager to carry out whatever was reasonable in the recommendations before them. I had certainly gathered also that under the guidance of their able Chairman they had very considerable powers of resistance, but now we are informed that, however hard up they may be, however their funds were pledged to sanitation, however impossible it may be to spend money on schools, yet on the very first onset the cry of the body of educationists would be so strong that both they and their Chairman would be incapable of resisting the appeal, and that their funds would be at the mercy of everybody who came to them. I am not disposed to think that the Municipal Commissioners of Calcutta are so weak. I myself believe that, with the advice and assistance they are likely to get, they will be capable of spending money, at all events on primary education, wisely and well. The principle has been accepted in every town in India, and certainly elsewhere. I do not want to discuss the necessity or the propriety of it in Calcutta, but as a matter of principle I am not prepared to tie up the hands of the municipality, and to say that without special legislation they shall not spend a penny on primary and technical education.

The Hon. Sir Alfred Croft's amendment to insert after clause (11) of section 36 the following new clause—"(12). Maintenance, support and

inspection of schools, including technical schools," being put, the Council divided:—

Noes 9.	*Ayes* 4.
The Hon. Dr. Gooroo Das Banerjee.	The Hon. Sir Alfred Croft.
The Hon. C. H. Moore	The Hon. C P. L. Macaulay.
The Hon. Dr. Mahendra Lal Sircar.	The Hon. H. J. Reynolds.
The Hon. Babu Kali Nath Mitter.	His Honor the President.
The Hon. G. Irving.	
The Hon. Moulvie Abdul Jubbar.	
The Hon. Sir Henry Harrison.	
The Hon. T. T. Allen.	
The Hon. the Advocate-General.	

So the Motion was negatived

The Hon. Dr. Gooroo Das Banerjee's amendment to insert after clause (11) of section 36 the following new clause—"(12) Promotion of primary and technical education," being put, the Council divided:—

Ayes 7.	*Noes* 6.
The Hon. Dr. Gooroo Das Banerjee.	The Hon. C. H. Moore.
The Hon. Babu Kali Nath Mitter.	The Hon. Dr. Mahendra Lal Sircar.
The Hon. Sir Alfred Croft.	The Hon. G. Irving.
The Hon. Sir Henry Harrison.	The Hon. Moulvie Abdul Jubbar.
The Hon. C P. L Macaulay.	The Hon. T. T. Allen.
The Hon. H. J. Reynolds.	The Hon. the Advocate-General.
His Honour the President.	

So the Motion was carried.

The Hon. Dr. Gooroo Das Banerjee moved that the following new clause be inserted after the above:—

"(13). Contribution to any neighbouring municipality for sanitary purposes."

He said that after the amalgamation the new municipality would be brought into immediate contact with poor municipalities on the north, east and south of the town. These poor municipalities not being at any considerable distance from the town, the health of the town might be affected by those subtle agencies by which disease is spread, so that for the health of the town the sanitary improvement of these poor municipalities would continue to be as much necessary as the improvement of the suburban area, now going to be amalgamated, has been felt to be for the improvement of the present town. And if these neighbouring municipalities are really from want of funds unable to carry out such matters, it is certainly necessary that the town should curtail some of its items of expenditure, for certain purposes which may without offence be considered superfluous, for the purpose of applying the money to that which is necessary not only for the health of its poor neighbours, but also for that of the town itself. And here we have very good precedent. In section 70 of the Mofussil Municipal Act, there is a provision for making similar contributions to neighbouring municipalities. If poor and backward municipalities in the mofussil can afford to make these contributions, there is no reason why the richest and most advanced municipality of the metropolis should be unable to make similar contributions to its poorer neighbours, especially when the contribution will be for its own welfare. It should also be borne in mind that the insertion of this clause will not impose any obligation on the Calcutta Corporation, but will only enable it to make grants when it has funds at its disposal and when a fit case is made out, and the Calcutta Corporation itself will be the judge of such fitness. They who will be the judges have themselves in one sense an opposite interest, and there is no likelihood of their making any such contribution unless the necessity is clearly proved and unless the contribution be for their own benefit.

The Hon. Sir Henry Harrison said:—I entirely agree with the hon. member, and precisely for the reason he has given. It might, for instance, be for the benefit of the health of Calcutta to assist in the sanitation of the island of Ooltadanga or of Chitpore or Cossipore. The municipality would be very unlikely to sanction any expenditure unless the Commissioners were satisfied that a sufficient case was made out. I am afraid I shall again incur the criticism which His Honour the President directed against the Commissioners. It is better, however, to be conscious of your own weakness than to pretend to a strength which you do not possess. I am afraid that with their strong sympathy for education, the Commissioners would be unable to resist skilful

pressure; but in the case under consideration they will be very unlikely to vote funds for any other Municipality unless an overwhelming case were made out.

The Hon. the Advocate-General said he thought that, with the amalgamation of the Suburbs, this amendment becomes an absolute necessity.

The motion was put to the vote and carried.

The Hon. Sir Alfred Croft moved that the following new clause be added to section 36:—

"Provision of free libraries."

He said—Little argument is needed to show that the establishment of a free library in the town would be a great advantage to an educated population, and it is proposed to allow the municipality to devote a portion of its funds to such a purpose. The provision would be permissive. Such a provision is contained in the District Municipal Act of Bombay, where Municipal Funds may be devoted to the maintenance of libraries and museums. In the particular case of Calcutta, the question derives importance from the fact that two years ago a proposal was actually made that the public library at the Metcalfe Hall should be transferred to the control of the Calcutta Municipality, or else that the Municipality should make a contribution to it. The desirability of having such a library was admitted, but there were two reasons why the Municipality did not then accept the offer. In the first place they doubted whether the project was expedient at the time and in the circumstances that existed; but in the second place they pointed out that the Municipal Act made no provision for the application of Municipal Funds to such an object. The Government of Bengal, in addressing the Municipality on the subject, said that, should the Corporation be inclined to devote its funds to such a purpose, the necessary provision would be introduced into the new Municipal Bill. As it seems to me that the question may arise hereafter as it did before, and that possibly the Calcutta Corporation may then desire to devote a portion of its funds to such a purpose, a clause enabling them to do so should be inserted in the Bill.

The motion being put, the Council divided:—

Ayes 9.	*Noes* 4.
The Hon. Dr. Gooroo Das Banerjee.	The Hon. C. H Moore.
The Hon. G. Irving	The Hon. Dr. Mahendra Lal Sircar.
The Hon. Moulvie Abdul Jubbar.	The Hon. Babu Kali Nath Mitter.
The Hon Sir Alfred Croft	The Hon. T. T Allen.
The Hon. Sir Henry Harrison.	
The Hon. C P. L. Macaulay.	
The Hon. H. J. Reynolds.	
The Hon. the Advocate-General.	
His Honour the President.	

So the Motion was carried.

His Honour the President said:—The Council will remember that on the 7th of January the Select Committee laid before the Council the first instalment of their report, and I then took the opinion of the Council as to whether we should proceed to consider that report after its publication, or whether we should wait till the full report of the Committee was before us; and the general opinion seemed to be that we should proceed with the consideration of the preliminary report of the Select Committee. I was under the impression at that time that the full report would have been published before now. In that I have been disappointed. I have no doubt that the Select Committee are very wise and right in not hurrying the matter, but I think it necessary to explain that I should not have asked you to go on with the consideration of the first instalment of the report unless I had reason to suppose that the rest of the report would have been ready by this time. Neither can I tell you now when it will be ready. When it is ready, it will be published, and time will be given for its consideration. I propose to adjourn the Council now, and call you together again for a purely formal meeting to receive the report when it is ready, and then to fix a day for the consideration of the report.

The Council was adjourned *sine die*.

GORDON LEITH,

Offg. Asst. Secy. to the Govt. of Bengal,

Calcutta;

The 28*th February*, 1888.

THE CANAL REVENUE REPORT FOR 1886-87.

No. 289.IA.

Government of Bengal.

PUBLIC WORKS DEPARTMENT.

Irrigation.

Dated Calcutta, the 20th February 1888.

RESOLUTION.

THE CANAL REVENUE REPORT FOR 1886-87.

READ—

The Canal Revenue Reports for 1886-87, and the Chief Engineer's note on the same.

The total outlay direct and indirect to the close of the year 1886-87, on canals in Bengal, of which capital accounts are kept, has been Rs. 6,97,11,574. Of this sum Rs. 8,66,000 have been contributed by the Imperial Government from Famine Relief and Insurance funds, Rs. 5,91,91,309 have been charged to loan funds, and Rs. 88,78,410 have been provided from Provincial revenues. In addition to the sums abovementioned, Rs. 7,75,855 have been expended on surveys, &c., for irrigation works which have not been carried out.

2. There are now in actual operation in Bengal 837½ miles of canal of which 608 miles are navigable. The total area commanded by irrigation canals is 2,698,846 acres, of which 4,17,821 acres, producing crops of the estimated value of Rs. 93,34,374, were irrigated during the year. The total number of boats plying in the canals was 1,81,173, of which 27,314 were passenger boats. The total value of goods passing the canals in boats and rafts aggregated Rs. 7,78,30,811 approximately.

3. The receipts from, and expenditure on, the canals in operation for the last three years, are given in the statement below, the figures include indirect charges :—

NAME OF CANAL.	1886-87.		1885-86.		1884-85.	
	Receipts.	Expenditure.	Receipts.	Expenditure.	Receipts.	Expenditure.
Major Irrigation Works.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Orissa Canals	1,79,611	5,20,635	2,07,359	3,56,678	1,43,585	3,29,[illegible]
Midnapore Canal	2,34,185	2,35,249	2,62,484	2,18,127	2,57,955	2,31,915
Hidgellee Tidal Canal	54,404	23,645	52,465	50,147	43,507	38,946
Sone Canals	9,18,429	6,13,558	10,62,646	5,84,002	8,62,474	6,35,530
Total ...	13,86,629	13,93,067	15,84,935	12,08,954	13,07,521	12,35,059
MINOR WORKS AND NAVIGATION.						
Irrigation and Navigation Works.						
Sarun Canals	12,427	28,659	41,143	23,331	9,341	25,593
Calcutta and Eastern Canals	4,83,654	1,92,264	4,79,484	1,96,209	5,69,726	2,91,214
Orissa Coast Canal	29,488	61,426	13,718	30,712	.	......
Total ...	5,25,569	2,82,349	5,34,345	2,50,252	5,79,067	3,16,807
GRAND TOTAL ...	19,12,198	16,75,416	21,19,280	14,59,206	18,86,588	15,51,866

The net income for the year was therefore Rs. 2,36,762. Interest amounting to Rs. 22,91,006 was, however, payable to the Imperial Government, so that there was a deficit of Rs. 19,56,284, to be met from Provincial revenues. This result is unfavourable as compared with that of the previous year, and is owing as much to a decrease in the receipts, the cause of which is explained further on, as to an increase in the expenditure owing to the necessity for special heavy repairs.

4. On the Orissa canals, the occurrence of a large breach in the main weir of the system, that on the Mahanadi river, on the 26th June 1886, necessitated a very large outlay, of which about one and a half lakhs were spent within the year, and the rest in the following year, the work being completed before the rains of 1887. Considerable damage was also caused by the floods of 1886 to nearly all the other weirs, the result being that, with scarcely an exception, the expenditure on them during 1886-87, was in excess of that of the previous year. On the Sone canals the repairs to the centre and Baroon shore sluices of the Sone weir, and the replacing of the old four feet thick piers by piers of six feet thickness caused an increase in the expenditure. On the Midnapore canal the repairs to tidal locks and silt clearance of tidal reaches were heavier than usual. Lastly on the Orissa Coast Canal the repairs on account of the floods and cyclone of 1885, added about Rs. 40,000 to what would otherwise have probably been the cost of maintenance.

5. The revenue collected in the last three years on the works mentioned in the above statement is shown below :—

Head	Revenue		
	1886-87.	1885-86.	1884-85.
	Rs.	Rs.	Rs.
Water-rates ...	10,43,343	12,33,612	9,46,818
Navigation	7,88,685	8,34,780	8,22,187
Miscellaneous	80,170	50,888	1,17,593
Total	19,12,198	21,19,280	18,86,588

6. The assessments or earnings of the same year are as follows :—

Head	Earnings		
	1886-87	1885-86	1884-85.
	Rs.	Rs.	Rs.
Water-rates	9,49,260	10,45,339	13,41,655
Navigation	7,88,685	8,34,780	8,21,876
Miscellaneous	80,171	90,481	81,519
Total	18,18,116	19,70,600	22,45,050

The revenue shows a falling off under both heads of water-rates and navigation. As regards the water-rate, the decrease is due partly to the falling off in the area irrigated, and partly to the much smaller amount of arrears to be collected as compared with the balance at the beginning of the previous year. Allusion is made to the falling off in navigation further on.

The excess of revenue over the assessments is due largely to the collections of arrears of water-rates of former years.

7. The arrears of water-rates outstanding at the close of each of the last three years, are shown in the statement following:—

Name of canal.	Arrears.		
	1st April 1887.	1st April 1886.	1st April 1885.
	Rs.	Rs.	Rs.
Orissa Canals	87,458	64,884	77,869
Midnapore Canal	50,749	69,972	1,11,212
Sone Canals	2,31,582	3,98,321	6,95,208
Sarun Canals	26,437	15,912	40,022
Total ...	3,96,226	5,49,089	9,24,311

The result for the year may be considered favourable, and shows a satisfactory reduction in the total amount of arrears. The remissions made amount to a comparatively small sum, and point to an improved system of working both as regards assessments and collections.

8. To understand more clearly the results of the working of the year, it is necessary to distinguish between the collections of arrears and those of the current demand. Of the former a sum of Rs. 4,10,658 or 77 per cent. of the outstandings of former years was adjusted. Of this amount 66·4 per cent. was collected, 5·5 written off as irrecoverable, and 8·1 per cent. remitted. Of the current year's demands (which include Rs. 43,645 not payable till after the expiry of the year) Rs. 2,37,196 or 25 per cent. only is left for recovery, 0·3 per cent. was remitted and the balance collected. On the Sone canals very good results were obtained, more especially in the Shahabad district. A considerable sum of arrears was, however, written off as irrecoverable. In Gya an improvement in collections is apparent, and the remissions are unimportant. In Patna, although remissions are less than in the other districts, the collections were considerably smaller. In Orissa remissions were merely nominal; but collections of the current demand cannot be considered satisfactory, and resulted in an increase in the arrear balance at the end of the year. The results in Midnapore are satisfactory both as regards collections and remissions. In Sarun the collections of the year, including arrears, amounted to less than one half of the total of the guarantee for the year, a result which must be considered far from satisfactory. On the whole the results of the year, with the exception noted above, show a considerable improvement in the working of the principal systems; and the Lieutenant-Governor notices with approval that the orders of the Local Government have received the careful attention of Civil officers. The arrears still amount, however, to a large proportion of the year's assessments, and Sir Steuart Bayley is hopeful that a continuance of the measures introduced will result in a further reduction of arrears, and allow of greater facilities for the prompt realization of the current demand.

9. The total number of certificates for the recovery of arrears issued during the year was 30,504 against 60,942 in the previous year in all districts. None were issued in the Gya District. The decrease is attributable chiefly to the large numbers previously issued under the stringent orders of Government for the recovery of arrears, but it is confidently expected that less recourse to this procedure will be necessary in future. The immediate effect of the increased exertion in collecting arrears has doubtless had its effects in bringing about the state of friction which subsequently rendered necessary the appointment of a Commission to enquire into the working of the Sone Revenue system.

10. Information regarding complaints is either non-existent or very meagre in the reports from Superintending Engineers and Revenue Authorities so that it is impossible to say whether the canal administration worked smoothly or not. That it was not doing so formerly is clearly shown by

the agitations of late years on the Orissa and Sone Canals; but, from what little can be gathered on this point in the reports, there appears to be no doubt that there was a decided improvement in this respect in the year under review. Further information should be afforded in future reports.

11. The areas irrigated (actuals) during the last three years are detailed in the following table.

			1886-87.	1885-86.	1884-85.
			Acres.	Acres.	Acres.
Orissa	Kharif	...	75,269	70,563	54,181
	Rabi	...	2,440	1,605	2 994
	Perennial	...	.. ...	171	197
	Total	...	77,709	72,339	57,372
Midnapore	Kharif	...	69,762	70,604	69 294
Sone	Kharif	...	30,082	80,792	131,372
	Rabi	...	16,662	50,610	77 558
	Perennial	...	11,626	10 527	9,262
	Hot-weather	...	15,278	10,857	959
	Five-year's lease	...	194,536	179,784	151,510
	Total	...	268,204	332,570	370,661
	Total Major works	...	415,675	475,513	497,327
Sarun	Kharif	...	566	888	1,916
	Rabi including hot-weather	...	1,580	3 677	5,307
	Total Minor works	...	2,146	4,565	7,223
	GRAND TOTAL, MAJOR AND MINOR WORKS	...	417,821	480,078	504,550

NOTE.—The figures for the Sone canals for the years 1884-85 and 1885 86 do not agree with those given in last year's Resolution. The reason is that last year the areas "assessed" within the year were given as the areas "irrigated," the figures for 1884 85 not being then available. The figures now given have been obtained from the Superintending Engineer's report, and show the areas actually irrigated within each year.

A still further decrease in the total area under irrigation has taken place, and the reason is not difficult to assign. The decline is entirely in annual leases, and chiefly on the Sone canals. The season was one of favourable rainfall, and the need for irrigation not pressing. On the other hand the steady increase in the area under five-years' leases on the Sone and in the area leased on the Orissa canals which is almost entirely under five-years leases, appears to be a satisfactory indication that the idea is gaining ground that it is advantageous to lease for a long term at a reduced rate as an insurance against failure in a bad year of rainfall; and the result will be probably a gradual extension of irrigation which cannot be expected under a system of short leases, the irrigation under which is subject to fluctuation with the amount and distribution of the rainfall.

12. The tollage collections from the various canals for the last three years are given in the table following :—

YEAR.	Orissa Canals.	Midnapore Canal.	Hidgellee Tidal Canal	Orissa Coast Canal	Sone Canals.	Calcutta and Eastern Canals.	Total.
	Rs.	Rs	Rs.	Rs.	Rs	Rs.	Rs
1884-85	52 784	1 19 797	41 392		37 385	5 08 406	7 59,764
1885-86	64 093	1 25 831	52 143	11 663	41 712	(a) 4 97 575	7 94 520
1886-87	58,664	1,09,033	51,904	28,587	40,065	4,79,193	7,71,706

(a) In last year's Resolution Rs 10,025 on account of demurrage was omitted and Rs. 26,286, miscellaneous receipts, wrongly added. The figure has therefore been reduced by the difference, viz , Rs. 16,261.

There is a decrease in tollage collections on all canals except the Sone and Orissa Coast. On the latter the increase is due to a further length of 55 miles having been temporarily opened for traffic. The whole length has been opened out during the current year, and the canal route from Gewankally on the Hooghly through to Cuttack is now established.

13. The causes that have led to a diminution in the receipts are chiefly the depression in the rice and jute trade, and do not point to any permanent decline in the traffic. The receipts on the Calcutta and Eastern Canals were also affected by alterations in tolls. In Orissa the traffic was to some extent impeded by the low level of the water in the Kendrapara and High Level Canals, but is also due to the falling off in the exports of rice from the Central Provinces on account of absence of floods in the Mahanadi.

14. In the Nuddea Rivers the receipts are higher than those of the previous four years, the cause being attributed to the favourable state of the channels and to an increase in trade generally.

15. With the exception of the revenue report of the Superintending Engineer of the South-Western Circle, all the reports were received with fair punctuality. In the case of the South-Western Circle the report was delayed owing to the ill-health of the Superintending Engineer. There was an improvement in the date of receipt of the Examiner's Finance Accounts.

ORDER—Ordered that a copy of this Resolution and of the note and its accompaniments be submitted to the Government of India, in the Public Works Department, for information; also that copies be forwarded to the Appointment, Revenue, and Financial Departments of this Government; the Board of Revenue, Lower Provinces; the Commissioners of the Presidency, Burdwan, Patna and Orissa Divisions; the Collectors of the 24-Pergunnahs, Nuddea, Hooghly, Midnapore, Burdwan, Patna, Shahabad, Gya, Sarun, Cuttack and Balasore; the Superintending Engineers of the Orissa, South-Western and Sone Circles; and the Examiner of Public Works Accounts, Bengal, for information.

By order of the Lieutenant-Governor of Bengal,

C. W. I. HARRISON, LIEUTT.-COL., R.E.,
Offg. Joint-Secretary to the Govt. of Bengal,
P. W. Dept.

Government of Bengal.

PUBLIC WORKS DEPARTMENT,

IRRIGATION BRANCH.

REVENUE REPORT.

Note by LT.-COL. C. W. I. HARRISON, R.E., *Chief Engineer, on the Canal Revenue Reports for the year* 1886-87.

THE total capital outlay on Irrigation works, of which capital accounts are kept, amounted during the year 1886-87 to Rs. 8,77,529 for direct and Rs. 20,864 for indirect charges, thus:—

CAPITAL EXPENDITURE.

	Direct charges Rs.	Indirect charges Rs.	Total. Rs.
Famine relief and insurance (grant-in-aid to Orissa Coast canal) ..	84,000	. .	84,000
Capital expenditure on Irrigation works not charged against Revenue ...	5,76,359	12,880	5,89,239
Minor works and Navigation, Imperial	—1,200	.....	—1,200
Ditto ditto, Provincial	2,18,370	7,984	2,26,354
Total . .	8,77,529	20,864	8,98,393

2. The total capital outlay at the end of the year 1886-87, including indirect charges, was as follows:—

	Direct charges. Rs.	Indirect charges. Rs.	Total. Rs.
Major Irrigation Works.			
Productive Public Works ...	5,75,63,328	16,27,981	5,91,91,309
Minor Works and Navigation.			
Ordinary Revenue—Imperial ...	6,84,966	90,889	7,75,855
Ditto —Provincial ...	87,01,613	1,76,797	88,78,410
Protective grants—Imperial ...	8,66,000	. ...	8,66,000
Total	6,78,15,907	18,95,667	6,97,11,574

3. The following statement shows the above outlay divided under the different projects :—

Works.	During 1886-87.			To end of 1886-87.		
	Direct charges.	Indirect charges.	Total.	Direct charges.	Indirect charges.	Total.

Grand Total ...	8,77,529	20,864	8,98,393	6,78,15,907	18,95,667	6,97,11,574

* Inclusive of expenditure from protective grants of Rs. 84,000 during 1886-87, and of Rs. 8,60,000 to end of 1886-87.

REVENUE.

4. The following statement shows the total receipts, working expenses and charges for interest, in respect of the works which are classed as Major Irrigation Works, during 1886-87 and four previous years :—

Particulars.	1886-87.	1885-86.	1884-85.	1883-84.	1882-83.
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts from all sources ...	13,86,629	15,84,935	13,07,521	11,69,841	13,17,729
Working expenses (direct charges) ...	13,32,600	11,53,416	11,79,758	10,69,394	11,50,028
Net revenue	54,029	4,31,519	1,27,763	1,00,447	1,67,701
Charge for interest	22,91,006	22,66,710	22,29,979	21,77,670	21,32,152
Deficit	22,36,977	18,35,191	21,02,216	20,77,223	19,64,451
Indirect charges debitable to Revenue	68,487	55,538	55,301	49,974	43,426
Total deficit ...	22,97,464	18,90,729	21,57,517	21,27,197	20,07,877
Rate per cent. on capital outlay ...	3·88	3·23	3·72	3·74	3·63

INTEREST.

5. The total amount of interest payable to the Imperial Treasury on account of Major Irrigation Works for the year is Rs. 22,91,006.

FINANCIAL RESULTS.

6. The following statement shows the financial results of both Major and Minor Irrigation Works, of which Capital and Revenue accounts are kept up, to the close of the year 1886-87 :—

		Major Irrigation Works.		Minor Works and Navigation.
		Rs.		Rs.
Direct revenue		1,27,67,926		1,92,56,933
Working expenses (direct charges) ...		1,29,84,941		72,85,212
Results on direct charges only	Loss ...	2,17,015	Profit ...	1,19,71,721
Indirect charges debitable to Revenue ...		6,60,778		1,73,969
Results on both direct and indirect charges ...	Loss ...	8,77,793	Profit	1,17,97,752
Charges for interest on capital ...		2,94,10,632		Not calculated.
Net results, including interest to end of 1886-87	Loss ...	3,02,88,425		......

The gross capital invested in Major Irrigation Works to the end of the year 1886-87, inclusive of indirect charges, being Rs 5,91,91,309, the loss aggregated 51·17 per cent. of the capital to end of that year. There is at present no indirect revenue or enhanced land revenue in Bengal, and consequently no assistance is obtained from this source as in other provinces.

7. The following abstract shows the expenditure on and receipts from Irrigation, Navigation and Agricultural Works during the year 1886-87, as compared with those of the preceding year:—

EXPENDITURE.	1886-87. Rs.	1885-86. Rs.
35.—Construction of Protective Irrigation Works— Imperial	84,000	82,000
42.—Major Works—Working Expenses— Provincial	13,32,600	11,53,416
43.—Minor Works and Navigation— Irrigation and Navigation Works—		
Imperial	(—)1,200	(—)1,200
Provincial	6,04,377	7,42,171
Total ...	6,03,177	7,40,971
Agricultural Works—		
Imperial	5,45,436	5,42,744
Provincial	84,340	3,13,458
Contributions	13,605	6,871
Total ...	6,43,381	8,63,073
48. Capital expenditure on Irrigation Works not charged against Revenue	5,76,359	6,38,487
Total ...	32,39,517	34,77,947

EXPENDITURE.

RECEIPTS.	Rs.	Rs.
XXIX.—Major Works—Direct Receipts— Provincial	13,86,629	15,84,935
XXX.—Minor Works and Navigation— Irrigation and Navigation Works— Provincial	7,29,629	7,18,974
Agricultural Works—		
Imperial	4,860	6,804
Provincial	3,059	2,797
Total ...	21,24,177	23,13,510

RECEIPTS.

8. The areas irrigated during the year 1886-87, and the four preceding years, by the Major Irrigation Works, are shown in the following statement:—

AREA IRRIGATED.

YEAR.	Orissa Canals. Kharif.	Rabi.	Perennial.	Total.	Midnapore Canal. Kharif.	Rabi.	Perennial.	Total	Sone Canals. Kharif, including 5-year leases.	Rabi.	Perennial.	Total.	Total. Kharif.	Rabi.	Perennial.	Total.

Total	5,01,932	45,78,850	Total ...	5,01,932	45,78,850

The interest charges to end of 1885-86 have been revised in accordance with Government of India, Public Works Department Resolution No. 159AG, dated 8th July 1887, and the revised charges have been adopted in preparing the account for 1886-87.

EARNINGS

10. The expenditure and earnings for the year 1886-87 are given below. Direct charges only are shown:—

EXPENDITURE.	Amount.	EARNINGS.	Amount.
I.—Works, Maintenance and Repairs.	Rs.		Rs.
Works (extensions and improvements)	....	Water-rates	1,25,676
Maintenance and repairs ...	3,52,761	Navigation	67,048
Establishment (including direction and accounts)	81,117	Miscellaneous	15,587
Tools and plant	15,486		
Total ...	4,49,364		
II.—Revenue management.			
Irrigation establishment ...	37,005		
Navigation ditto ...	15,471		
Total ...	52,476	Total earnings ...	2 08,311
III.—Refunds of revenue ...	92	Deficit ...	2,93,621
Total working expenses ...	5,01,932	Total ...	5,01,932

The earnings of the year include assessments made during the year under review on account of previous years, and the amounts legally due of the assessments of 1886 87.

LENGTHS OF CANALS

11. The lengths of canals and distributaries in operation at the close of the year 1886-87 are given in the following statement:—

NAME OF CANAL.		Navigable canals	Canals for irrigation only.	Distributaries and village channels.	Area protected from flood	Area under command.	Area provided with distributaries	Area irrigated, 1886-87.	Percentage of area irrigated to area provided with distributaries.
		Miles	Miles.	Miles.	Acres.	Acres.	Acres.	Acres.	
Kendraparah system	Kendraparah	39	..	333¾	129,421	101,110	97,300	39,714	41 1
	Kendraparah extension	15			8 960	7,000			
	Gobri (including extension)	21	......	......	27,251	53,290	... ..		
	Pattamoondee		47	32¼	65,000	51,250	9,397		
Taldundah system.	Taldundah	37	..	71½	19,520	15,250	15,250	18,685	82 6
	Machgong	4	15	122¾	44,928	71,600	41 000		
High Level Canal, Range I ..		33	.	131¼	80,128	48,815	47,780	12,412	25 9
Total Mahanuddee Series ..		139	62	691½	375 808	348,315	201,317	70,811	35 1
High Level Canal, Range II ..		12½		..		70,000		407	. ..
High Level Canal, Range III ..		19		....	..	57,500	.	6,491	
Total Brahmini-Byturni Series		31½		..	.	127,500	. .	6,898	
Total Orissa Canals ..		170½	62	691½	375,808	475,815	201,317	77,709	

In comparison with the year 1885-86, the total length of canals for irrigation and navigation remained the same, but a length of 46¾ miles of distributary and village channels was added during the year, providing for an additional area of 11,437 acres.

RAINFALL

12. The rainfall of the year 1886-87 and of the previous year is shown in table No. IVE. From this it appears that the average fall throughout the canal area was, both for the kharif and the year, greater than that of the year 1885-86.

RAINFALL.

The average rainfall in the immediate neighbourhood of the Orissa canals, calculated on the figures at thirteen stations for eighteen years, is 56·28 inches. The fall of the year 1886-87 at the same stations was 60·07 inches, or 3·79 inches above the average.

From statistics of rainfall in the upper districts drained by the Mahanadi, it appears that the average fall for the year was 16·90 inches less than that for the year 1885-86, and 12·97 inches less than the average of the last six years, so that the volume passing down this river was much less than usual.

The following statements are deduced from the subsidiary rainfall returns given by the Superintending Engineer and from previous reports:—

		Average of thirteen stations.				
		1882-83.	1883-84.	1884-85.	1885-86.	1886-87.*

The above show that, as regards the kharif season, the rainfall was everywhere abundant and above the average, more especially in the month of September.

IRRIGATION.

13. The following statement shows the areas irrigated and yearly rainfall since 1877-78:—

Year.	Kharif.	Rabi.	Perennial.	Total.	Rainfall.
	Acres.	Acres.	Acres.	Acres.	Inches.
1877-78 ...	95,088	3,071	336	98,495	47·94*
1878-79 ...	105,500	5,517	233	111,250	61·98*
1879-80 ...	105,186	3,616	236	109,038	60·85*
1880-81 ...	112,171	4,877	173	117,221	85·10*

* Mean of observations in Cuttack and Marsaghai.
† Ditto ditto at 13 stations throughout canal irrigated area.

Area irrigated.

14 The area irrigated is also that assessed during the year, showing an improvement of 5,370 acres chiefly in five-year leases, and there was a considerable decrease in the area illicitly irrigated. The statement below gives a comparison for three years.

		1886-87.	1885-86.	1884-85.
		Acres.	Acres.	Acres.
Karif ..	Five-year leases	73,699	65,762	54,241
	Annual leases	68	50	20
	Unauthorized irrigation ...	1,354	4,754	1,570
Rabi ...	... ..	2,439	1,604	2,915
Perennial ...	Sugarcane	149	169	196
Total, including unauthorized irrigation ..		77,709	72,339	58,942
Total, excluding unauthorized irrigation ..		76,355	67,585	57 372

In the above statement 1,148 acres free irrigation of chaukidar's jagirs is not included, the total area actually irrigated being therefore 78,857 acres. This area ought to have been included in the assessments in order to make the assessed and irrigated areas agree, and then shown as a free grant. It cannot now be included in the returns for the year under review, as the details are wanting, but will be in future. The area leased is given by the Deputy Revenue Superintendent as 87,394 acres, but of this total, 13,627 acres, inclusive of the area of chaukidar's jagirs, were excluded from assessment. The practice in Orissa for three years past has been to delay the issue of the demand statements until it was finally ascertained what areas should be excluded from assessment for such reasons as non-receipt of water, failure of crops, &c. Such areas, more especially in the case of five-year leases, would more properly be shown as remissions, the demand being made at the time laid down in the rules on the area as leased. There does not appear to have been any authority for the procedure adopted in this matter by the Canal Revenue Department, and it is opposed to the spirit of the rules passed under the Irrigation Act.

Unauthorised irrigation.

15. There is a considerable decrease in the unauthorized or surreptitious irrigation, as will be seen from the foregoing statement, which decrease, according to the Deputy Revenue Superintendent, is "an index that there was little or no water to spare, especially when it was most wanted on leased areas." What this means is not very clear; but, apparently, the conclusion to be drawn is that, had there not been a scarcity of water, the area of unauthorised irrigation would have been as large as usual; and, if this be the case, it neither reflects credit on the administration, nor does it give hope that the people are taking more kindly to lawful modes of irrigation.

Five year leases.

16. The total of the area 87,394 acres, shown as leased by the Deputy Revenue Superintendent, cannot be considered correct; since for some years past 8,465 acres, which were included in five year leases in 1883, have been regularly excluded from assessment as non-irrigable, instead of revision being made of the original leases. The area excluded from assessment as having suffered loss or on account of non-receipt of water in consequence of the breach in the Mahanadi weir was 4,014 acres.

Assessments.

17. The assessments of water-rates during the year under review are compared below with those of the two previous years:—

	1886-87	1885-86.	1884-85.
	Rs.	Rs.	Rs.
Water rates	1,25,676	1,05,019	82,185

These figures do not represent the assessments of the crops irrigated in each year; they show the assessments which are legally due within the year, and include a portion of the assessments of the crop of the year and a portion of the assessments of the crop of the previous year, and some arrears for still earlier years

Of the amount assessed during 1886-87, the sum of assessments on account of previous years was Rs. 50,530, and that on account of the current year Rs. 75,146.

The increase over the two previous years is due to the steady increase in the kharif irrigation, that is to say, practically, five-years' leases; for a portion of the increase is due to the improvement in the year under review as compared with 1885-86; and a portion to the assessments for 1885-86 falling due in 1886-87 being larger than the assessments for 1884-85 falling due in 1885-86.

COMPLAINTS.

18. No information is afforded regarding the number of complaints, their nature, or how disposed of. It is, however, clear that they exist from the fact that assessment papers are delayed for the correction of mistakes, and that unauthorised irrigation is always a source of complaint and friction. In future detailed information regarding complaints, in connection both with irrigation (authorised and unauthorised) and with miscellaneous matters, should be given. Complaints in connection with unauthorised irrigation should be clearly distinguished from the rest.

COLLECTIONS AND REMISSIONS.

19. The balance of water-rates outstanding on the 1st April 1886 was Rs. 64,884, and the amount falling due during 1886-87, being Rs. 1,25,676, the amount for recovery was Rs. 1,90,560. Of this sum, the cash realisations during the year aggregated Rs. 96,976, and the remissions amounted to Rs. 6,126. The total amount adjusted during the year under review being Rs. 1,03,102, the balance outstanding on the 1st April 1887 was Rs. 87,458. This increase of the unrealised balance of assessments is in a great measure due to the breach in the Mahanadi anicut. The mere fact of the breach, even where damage to crops had not occurred, was considered a sufficient reason for lessees to be unwilling to pay the assessments on unirrigated areas, and even when water had been supplied they made the breach a plea for withholding payment. But for this accident, it is probable that the voluntary payments would have been more numerous, and the revised estimate of Rs. 1,44,000 realised.

The following statement shows the collection operations of the year in a form similar to that given in last year's report:—

	OUTSTANDINGS OF ALL YEARS UP TO AND INCLUDING 1885-86.			DEMANDS DUE IN 1886-87 FOR THE IRRIGATION OF THAT YEAR.		
	Rupees.	Percentage of demands outstanding on 31st March 1886.	Rupees.	Rupees.	Percentage of demands for the year.	Rupees.
Outstandings at end of 1885-86 with assessments made in 1886-87 ...	......	100·0	1,15,414		100·0	75,146
Adjustments made in 1886-87. { Collections ...	73,288	63·5		23,687	31·5	
Adjustments made in 1886-87. { Remissions ...	6,074	5·3		52	·1	
Total adjustments	....	68·8	79,362		31·6	23,739
Outstanding on 1st April 1887	.....	31·2	36,052		68·4	51,407

The outstandings on account of 1886-87 and previous years on the 1st April 1887 were respectively as below:—

		Rs.
1881-82	... ...	509
1882-83	... ...	1,758
1883-84	... ...	4,168
1884-85	... ...	9,416
1885-86	... ...	20,200
1886-87	... ...	51,407
	Total arrears ...	87,458

The collection of the older arrears continues satisfactory, and there is again an improvement in the reduction of amounts remitted.

REVENUE SYSTEM.

20. The revenue system of the Orissa canals still remains the same, and the work of assessment of water-rates has not yet been made over to the officers of the Public Works Department. The delay was due in a great measure to the difficulty of re-arranging the old establishments. An enquiry is now being held into the working of the Sone canals system, and until such time as the report of the Commission now sitting has been considered, the introduction of any change does not appear advisable.

DUTY OF WATER.

21. Statement IE gives the duty of water on the different canals. That of 6·97 acres per cubic foot for the High Level Canal, Range II, is evidently incorrect, and is due to the loss on account of navigation, of which apparently no account is kept, and to escape through temporary outlets, the area under irrigation being also very small.

The duty on the remaining canals for the kharif crop on the discharge utilised varies from 182 acres for the Taldundah system to 85 acres for the High Level Canal, Range III.

The absence of distributaries practically vitiates the results from the High Level Canal, Ranges II and III.

The Kendrapara Canal system includes the Pattamoondi and Gobri Canals, for which also no distributaries have been provided, and the Superintending Engineer shows that, taking the Kendrapara Canal separately, the duty is 106 acres.

The under-mentioned canals give, therefore, probably the best results, but even these cannot be considered trustworthy:—

	Duty on discharge at head.	Duty on discharge utilised.
Kendrapara Canal	92	106
Taldundah Canal system ...	112	182
High Level Canal, Range I ...	110	169

The duties calculated on the gross discharge at the head are pretty even, but they cannot be relied upon, for in the High Level Canal no allowance is made for water flowing into the canal through drainage inlets, and the Kendrapara Canal irrigating the largest area, 30,872* acres against 18,576 for the Taldundah, and 12,400 for the High Level, gives the lowest duty. No reason is assigned for the high duty on the Taldundah Canal. Taking the duty on the discharge utilised, the Kendrapara canal still gives the lowest result, but the quantity utilised, 291 cubic feet out of 333 as given by the Superintending Engineer, is proportionately much larger than that utilised on the other two canals.

* Irrespective of the Pattamoondi and Gobri Canals.

The area of rabi under all canals being small, the calculations of duty are valueless.

CROP EXPERIMENTS.

22. During the year 175 experiments on the outturn of crops were made, 91 of which were upon irrigated areas. The outturn in the case of both irrigated and unirrigated land was below the average of the previous five years by 4·05 maunds of paddy and 6·36 maunds of straw per acre for the former, and 2·73 maunds paddy and 3·91 maunds straw for the latter. No explanation is forthcoming as to why the falling off on the irrigated crop was greater than on the unirrigated. The total average outturn for the year was 15·66 maunds of paddy and 23·87 maunds of straw on irrigated, and 12·25 of paddy and 19·29 of straw on unirrigated land. The increased value per acre of produce in favour of irrigation was Rs. 3·86.

REVENUE ESTABLISHMENT.

23. The revenue establishment of the year cost Rs. 37,005. The following statement shows the details, and compares the figures of the year under review with the similar figures of the two previous years:—

	1886-87.	1885-86.	1884-85.
Establishment under Collector.	Rs.	Rs.	Rs.
Superior officers and permanent establishment, including travelling allowance	26,007	24,028	23,691
Contingencies	2,625	1,948	1,890
Headmen's fees	1,209	1,229	3,468
Establishment under Executive Engineer.			
Permanent and temporary establishment	2,942	2,854	2,786
Contingencies	......	......	61
Water regulation establishment	4,222	4,245	4,198
Total ...	37,005	34,304	36,094
Collections of water-rates and miscellaneous revenue by the Canal Revenue Department	1,05,775	1,16,940	59,111
Percentage ...	34·98	29·3	61·0

NAVIGATION.

24. The receipts under the head "Navigation" amounted to Rs. 67,048, of which Rs. 8,384 were on account of the earnings of the transport service, and Rs. 58,664 from tolls on boats and rafts. The collections for ten years under the above heads are given in the table below:—

	Tolls.	Transport service.	Total.
	Rs.	Rs.	Rs.
1877-78	33,844	......	33,844
1878-79	57,042	......	57,042
1879-80	62,389	35,686	98,075
1880-81	41,297	30,105	71,402
1881-82	53,219	29.987	83,206
1882-83	66,736	41,737	1,08,473
1883-84	61,602	48,550	1,10,152
1884-85	52,784	27,018	79,802
1885-86	64,093	19,919	84,012
1886-87	58,664	8,384	67,048

TRAFFIC.

25. The following statement compares the traffic of all the canals in Orissa during the year under review with that of the year preceding:—

CANALS.	Miles open.	Tollage.		Number of boats.		Tonnage.		Value of cargo.		Tollage per mile of canal.	
		1886-87.	1885-86.	1886-87.	1885-86.	1886-87.	1885-86.	1886-87.	1885-86.	1886-87.	1885-86.
		Rs.	Rs.	No.	No.	Tons.	Tons.	Rs.	Rs.	Rs.	Rs.
Taldandah and Machgong Canals.	31	2,880	1,784	725	819	14,081	13,843	57,972	83,245	92·9	57·5
Kendrapara and Gobri Canals (including extension).	75	41,786	48,572	5,959	9,233	66,139	107,193	30,80,180	31,75,780	557·1	647·6
High Level Canal, Range I.	33	7,852	8,749	3,321	4,930	16,075	29,449	6,25,505	9,10,570	237·9	265·1
High Level Canal, Rang II.	12½	3,788	3,752	2,902	3,888	19,410	20,024	3,32,112	3,49,026	303·0	300·1
High Level Canal, Range III.	19	2,358	1,236	1,404	1,792	11,793	9,633	1,00,416	1,13,512	124·1	65·0
Total ...	170½	58,664	64,093	14,311	20,662	128,308	180,142	42,56,185	46,32,733	344·1	375·9

There is a falling off from the previous year under all heads, due to the accident to the Mahanuddy weir, which reduced the level of the water in the Mahanuddy and Berupa rivers to such an extent as to seriously interfere with the navigation of the canals during the last four months of the year.

The *up* traffic on these canals was during the year considerably in excess of the *down*. This was due entirely to the falling off in the exports of grain, partly on account of the impeded navigation, and in a greater measure to the absence of floods in the Mahanuddy, which prevented grain being brought down as usual from Sumbhalpur; 19,594 tons of grain only were carried against 57,941 tons in the previous year.

PASSENGERS.

26. There was again a considerable increase in the passenger traffic on all, but chiefly on the Taldandah Canal.

TRANSPORT SERVICE.

27. The steamer services between Chandbally and Cuttack by way of the Kendrapara Canal continued to be maintained by the same three companies as worked the traffic in the previous year, in conjunction with the ocean steamers running from Calcutta, though under difficulties on account of the low supply in the upper reaches of the Kendrapara Canal.

The only line of steamer navigation now worked by Government in the Orissa Circle, in fact in Bengal, is that on the High Level Canal between Cuttack and Bhuddruck, a distance of 75 miles by canal and river; and during the year under review the steamers *Pioneer* and *Aurora* were employed upon this line. In consequence of the accident to the Mahanuddy weir, the working of the service was seriously interrupted and unsatisfactory.

The working expenses and earnings of the steamers amounted, respectively, to Rs. 12,247 and Rs. 8,384, the result being a loss of Rs. 3,863 against the profit of Rs. 3,379, which was obtained in the year preceding. This was chiefly due to the interrupted service mentioned above, and also to the difficulty in keeping free from silt the navigable channel across the Brahmini river, so that often cargo and passengers had to be taken to their journey's end by tracking; more especially was this the case when, after

October, on account of the bad state of her boiler, the *Pioneer* had to be taken off the service, and only one steamer was available for it

MISCELLANEOUS RECEIPTS.

28. The miscellaneous receipts for the year under review are compared by sub-heads with those of the previous year in the following table:—

SOURCE OF REVENUE.	YEAR IN WHICH RECEIVED.		DIFFERENCE.	
	1886-87.	1885-86.	Increase.	Decrease.
	Rs.	Rs.	Rs.	Rs.
Plantations	1,885	981	904	......
Rent of lands	5,340	7,337	......	1,997
Canal produce	676	1,508	.. ...	832
Rent of buildings	4,936	4,739	197	.. ...
Sale of old materials	35	4	31	......
Fisheries	650	493	157	. ...
Sale of water	86	190	......	104
Miscellaneous	1,979	1,244	735	......
Total ...	15,587	16,496	2,024	2,933

The most serious falling off is under the head "Rent of lands." This appears to be due to the rule having been introduced of giving only annual leases to prevent the acquisition of rights of occupancy. The result has been either a decrease in the area leased out, or in the rents obtained, though it is not very clear which.

REVENUE.

29. The total revenue for the last ten years under the three main heads is shown in the following statement :—

YEARS.	Water-rates.	Navigation.	Miscellaneous.	Total.
	Rs.	Rs.	Rs.	Rs.
1877-78	1,17,818	33,844	9,445	1,61,107
1878-79	1,16,416	57,042	16,484	1,89,942
1879-80	1,57,747	98,075	23,365	2,79,187
1880-81	1,78,047	71,402	20,329	2,69,778
1881-82	1,24,290	83,206	15,655	2,23,151
1882-83	1,80,325	1,08,473	31,212	3,20,010
1883-84	1,11,856	1,10,152	15,860	2,37,868
1884-85	51,245	79,802	12,538	1,43,585
1885-86	1,06,842	84,012	16,496	2,07,350
1886-87	96,976	67,048	15,587	1,79,611

WORKING EXPENSES

30. The working expenses (direct charges) of the Orissa canals for the last ten years are shown in the following statement :—

PARTICULARS.	1877-78	1878-79.	1879-80	1880-81	1881-82.	1882-83.	1883-84.	1884-85	1885-86.	1886-87.
1.—Maintenance.	Rs.	Rs	Rs.	Rs.	Rs.	Rs.	Rs.	Rs	Rs.	Rs.

* Exclusive of Rs. 427 paid in England

A comparison of the figures in the two foregoing statements shows the loss in working the canals during the last six years, which was as follows :—

	Rs.
1881-82	1,05,509
1882 83	21.530
1883-84	54,822
1884-85	1,72,152
1885-86	1,35,227
1886-87	3,22,321

The figures include direct charges only.

MAINTENANCE.

31. The following statement shows by sub-heads the cost of maintenance, exclusive of that of the transport service, during the year under review, with the corresponding figures of the past two years :—

	1886-87.	1885-86.	1884-85.
	Rs.	Rs.	Rs.
Head works	2,34,500	61,899	67,581
Main canals	74,913	1,09,225	93,145
Distributaries	21,458	24,521	22,929
Drainage works	15,512	16,807	6,125
Total ...	3,46,383	2,12,452	1,89,780

The great increase in the cost of maintenance is entirely under head works, all other main heads of expenditure showing a decrease.

WEIRS.

32. A breach took place in the Mahanuddy anicut on the first rise of the river at the end of June, involving a portion of the north end of the centre sluices and adjoining weir wall. A heavy outlay was incurred in the first instance in constructing a stone dam ; the total expenditure on the repairs of the weir, including maintenance, amounted to Rs. 1,70,278 against Rs. 16,773 for the previous year. The repairs to the breach were not completed within the year, and a portion of the expenditure thereon will therefore fall on the year 1887-88. An accident also occurred to the Naraj weir, the greater number of the piers of the shore sluices being overturned in the month of September; the cost of repairs was Rs. 16,872 against Rs. 8,686 in 1885-86. In this case also the repairs were not completed within the year. There was excess expenditure also on the Beropa, Bhramini, Pattia and Barrah weirs over the outlay of the previous year; due, in the case of the last three weirs, to extensive repairs being required to the aprons; and, in the case of the Beropa, to the necessity for deepening the channel above for navigation, and to increase the flow down the river for the purpose of facilitating the repairs of the Mahanuddy weir. The average cost of repairs per foot run of the seven weirs was increased from Rs. 2·79 in the previous year to Rs. 12·20.

MAIN CANALS.

33. The following statement shows the expenditure for the year 1886-87, and the three previous years, on the maintenance of the canals :—

CANALS.	Miles.	1886-87.		1885-86.		Miles.	1884-85.		1883-84.	
		Cost.	Per mile.	Cost.	Per mile.		Cost.	Per mile.	Cost.	Per mile.
		Rs.	Rs.	Rs.	Rs.		Rs.	Rs.	Rs.	Rs.
Kendrapara	39	21,004	538	30,789	789	39	36,643	940	26,823	688
Kendrapara Extension ...	15	2,741	182	2,996	200	15	4,458	297	2,795	186
Gobri	15	3,975	265	7,806	520	15	5,301	353	6,025	402
Gobri Extension	6	3,599	600	9,101	1,517	......	......	......	... ..	......
Fattamoondee	47	5,240	111	8,253	176	47	7,334	156	6,160	131
Taldundah	27	9,971	369	14,213	526	27	10,487	388	10,659	394
Machgong	19	4,041	212	2,901	152	19	3,785	199	5,306	279
High Level, Range I .	33	12,862	389	15,892	481	33	14,068	426	18,206	552
Ditto, do. II ..	12½	5,265	421	6,653	532	12½	3,275	262	3,577	286
Ditto, do. III ...	19	6,215	327	10,621	559	19	7,792	410	6,981	367
Total ...	232½	74,913	322	1,09,225	400	226½	93,143	411	86,525	382

It is satisfactory to notice that the mileage rates for the maintenance of all canals has diminished, the only exception being the Machgong Canal. The decrease is partly attributed to the saving in work establishment and "miscellaneous." Dredging silt and weed-clearing also were required less on most of the lines, whilst on some the decrease was in a great measure due to the expenditure in 1885-86 having been abnormal on account of the cyclone of September 1885. The canals were closed for silt clearance as below:—

Name of Canal.	Date when closed.	Date when re-opened.
Kendrapara Canal and branch to Albha ...	2nd May 1886 ...	5th June 1886.
Ditto and extension to Jumboo ...	2nd „ „ ...	7th „ „
Taldundah Canal	1st May „ ..	10th „ „
Machgong Canal	1st „ „	19th „ „
High Level Canal, Range I	2nd May „ ...	8th „ ,
Ditto, do. II	2nd „ „ ...	4th „ „
Ditto, do. III	2nd „ „ ...	4th „ „

34. No return has been furnished of the silt clearance of Ranges II and III of the High Level Canal. On the remaining canals, 4,411,838 cubic feet of silt was cleared by hand at a cost of Rs. 12,807, or at an average rate of Rs. 2-14-6 per 1,000 cubic feet.

DREDGING AND SILT CLEARANCE.

The quantity of silt cleared by dredging on the same canals was 124,066 cubic feet, at a cost of Rs. 2,089, or at an average rate of Rs. 16-13 per 1,000 cubic feet.

35. The following statement shows the cost of repairs to distributaries for the year 1886-87, and the three previous years:—

DISTRIBUTARIES.

	1886-87.			1885-86.		1884-85.			1883-84.		
	Miles	Cost	Per mile	Cost	Per mile	Miles	Cost	Per mile	Miles	Cost	Per mile
Distributaries		Rs	Rs.	Rs	Rs		Rs	Rs		Rs	Rs
Kendrapara Canal system	3[illegible]3	11,073	33 17	13,156	39	330	13,298	40	330	15,480	47
Taldundah Canal	71¼	232	31 21	[illegible],297	32	71¼	2,280	3[illegible]	71½	2,724	38
Machgong Canal	122¼	4,071	33 10	3,743	30	122¼	4,199	34	120¼	4,358	36
High Level Canal Range I	117[illegible]	4,051	34 80	5,325	45	117¼	3,143	27	117¼	3,238	28
Total	[illegible]	[illegible] 7	33 27	24,521	38	641	22,920	35	639½	25,7[illegible]9	40

The mileage rate for maintenance has decreased on all canals except the Machgong Canal, and in all cases the rate is low.

MIDNAPORE CANAL.

36. The Capital, Interest, and Revenue account of this canal are given below:—

CAPITAL ACCOUNT.

1—CAPITAL ACCOUNT.

Heads of Account	Outlay during 1886-87	Outlay to end of 1886-87
DIRECT CHARGES.	Rs.	Rs.

Navigation establishment ...	7,575	1,19,429			
Total ...	31,729	4,31,147			
III.—Refunds of revenue ...	211	3[illegible]4			
Total working expenses ...	2,26,372	28,70,828			
Profit ...	7,813	58,142			
Total ...	2,34,185	29,28,970	Total ...	2,34,185	29,28,970

The total capital outlay (direct charges) up to the end of the year 1886-87 amounted to Rs. 82,61,992. The estimates sanctioned by the Secretary of State being for Rs. 83,16,768, there remained a balance of Rs. 54,776 at the close of the year, but it is expected that the capital account of this canal will be closed at an early date.

The interest charges of this canal up to the end of the year 1885-86 have been revised in accordance with the orders of the Government of India.

37. The revenue account calculated on the "earnings" of the year is given below. Direct charges only are shown:—

EARNINGS.

EXPENDITURE.	Amount.	EARNINGS.	Amount.
I.—Works, Maintenance and Repairs.	Rs.		Rs.
Works (extensions and improvements)	......	Water-rates	1,06,750
Maintenance and repairs ...	1,37,752	Navigation	1,09,693
Establishment, including direction and accounts	31,677	Miscellaneous	15,658
Tools and plants	25,003		
Total ...	1,94,432		
II.—Revenue management.			
Irrigation establishment ...	24,154		
Navigation ditto ...	7,575		
Total ...	31,729		
III.—Refunds of Revenue ...	211		
Total working expenses ...	2,26,372		
Profit	5,729		
Total ...	2,32,101	Total ...	2,32,101

The water-rates on lands irrigated during the year are due within the year. The amount of water-rates shown as earned includes arrear assessments for former years.

38. The following table shows the rainfall for the year 1886-87 and the three previous years:—

RAINFALL

Stations.	1886-87.	1885-86.	1884-85.	1883-84.	Average of 17 years previous to 1886-87.
	Inches.	Inches.	Inches.	Inches.	Inches.
Midnapore	49·39	76·20	57·19	44·07	56·40
Panchkoorah	50·56	86·03	43·84	51·92	56·61
Contai	48·24	76·45	77·30	70·31	70·19

The rainfall during the year under review was considerably less than that of the previous year, and below the average of seventeen years previous to the year 1886-87. It was, however, well and seasonably distributed, so that the demand for canal water was not very pressing, and there was no loss from excessive rainfall anywhere in the irrigable area.

39. The area under lease, which is the same as the area irrigated, was 69,762 acres against 70,604 irrigated in the previous year. No rabi leases were executed, and 256 acres only were under annual leases, leaving 69,506 acres under five-year leases up to the end of the year against 67,399 for the previous year. Of the above leases, 20,285 acres expired on the 31st March 1887, including 256 acres under annual lease. The total area under lease may be thus classified:—

AREA LEASED.

		Acres.
Leases which expired on 31st March 1887	... ...	20,285
" " will expire " 1888	... ...	32,875
" " " " " 1889	... ...	12,530
" " " " " 1890	... ...	2,276
" " " " " 1891	... ...	1,796
	Total ...	69,762

Two hundred and fifty-six acres were surreptitiously irrigated and assessed, but afterwards admitted as annual leases, being also the total of such leases. Since no five-year leases expired in 1885-86 (see last year's Note), the leases for 1,796 acres shown above as expiring on 31st March 1887 may be taken as *new* leases executed during the year under review. Of this large area of 20,029 acres under five-year leases which expired on the 31st March 1887, it is stated that leases for 11,483 acres had been renewed up to the end of July 1887.

AREA IRRIGATED

40. The following table compares the irrigation of the year 1886-87 with that of the two previous years, and gives the proportions between the areas irrigated and commanded:—

PARTICULARS.		Total, provided for in the revised estimate	Midnapore Weir Ranges IV and V			Panchkoorah Weir, Range III and Tidal Reaches Ranges I and II			Total.		
			1886-87	1885-86	1884-85	1886-87	1885-86	1884-85	1886-87	1885-86.	1884-85.
Length of distributaries and branch canals	Miles	299 12	229 94	229 94	229 94	53 25	53 25	52 25	283 19	283 19	282 19
Area provided with distributaries	Acres	125 000	100 000	100 000	100 000	25 000	25 000	25 000	125 000	125 000	125 000
Area irrigated	"		62 2[illegible]5	60 580	60 352	7 547	10 024	8 942	69 762	70,604	69 294
Percentage of area irrigated to that commanded			62 22	60 58	60 3[illegible]	30 15	40 10	35 77	55 81	56 48	55 43

Of the total area 88 acres only were irrigated by lift. The entire area irrigated by this canal is rice.

COMPLAINTS

41. There is no information about complaints against the assessments or under any other head, and the remarks made on this point in paragraph 18, under the Orissa Canals, apply also to this canal. The information should be supplied in future.

DUTY OF WATER

42. The duty of water for the four months of the kharif season from July to October is given by the Superintending Engineer, for the discharge utilized, as 134 acres per cubic foot for the area under the Midnapore weir, and 231 acres for that under the Panchkoorah weir. This represents a total depth of 21 inches over the whole area in the former case, and 12 inches in the latter for four, or may be five, waterings. This difference is probably due to the fact that the area under the Panchkoorah weir is low lying as compared with that under the Midnapore weir. In a year of seasonable rainfall, therefore, the former would be more likely to be benefited by drainage supplementing the water received from the canal. this would be the case with the lands under the Midnapore weir.

43. The following comparative statement shows the balances, assessments, and recoveries of water rates on the Midnapore Canal since the year 1882-83:—

YEAR	Amount outstanding at commencement of the year	Amount falling due during the year	Total for recovery	Cash realisation.	Remitted or written off	Balance at the end of the year
	Rs	Rs	Rs	Rs	Rs	Rs
1882-83	1 31 701	1,54 646	2,86 347	1,04 060	39 811	1 42 476
1883-84	1,42 476	1,47,992	2 90,168	1 31 00[illegible]	11,777	1,44,691
1884-85	1,44 691	1 22 321	2 67 012	1 16 807	38,993	1,11,212
1885-86 ..	1,11,212	1,10,868	2 22,080	1 08,709	43 399	69,972
1886-87 . .	69,972	1,06,750	1,76,722	1,08,831	17,139	50,749

COLLECTIONS

The amount of the cash realisations was almost identically the same as that of the previous year, although the total for recovery was considerably less, the percentage of collections being 61·01 of the whole, which may be considered a favourable result. The amount of remissions, which were, practically, entirely arrears of previous years, has sensibly decreased; but this result was to be anticipated, considering the large remissions of arrears in the previous two years. The balance outstanding at the end of the year shows improvement, and the Deputy Revenue Superintendent is hopeful that all arrears will be cleared off in the present year, and the realisations of the current demand thereby facilitated.

REMISSIONS

CERTIFICATE PROCEDURE.

44. There were 6,067 certificates filed against 17,501 for the previous year, the falling off being attributed to the large number previously issued under the peremptory orders of Government for the recovery of all arrears.

Revenue establishment

45. There is a slight increase in the cost of revenue establishment under the Collector, the amount being Rs 23,064 against Rs 21,875 for the previous year. The percentage of cost on the total collections, which amounted to Rs. 1,23,769, is 18·63 against 17 89 for the previous year.

Navigation

46. The total receipts under the head of Navigation amounted to Rs 1,09,693 against Rs 1,37,578 for the previous year, showing a considerable decrease Of the total Rs. 8 639 was on account of tolls from the Calcutta Steam Navigation Company, and Rs. 1,01,054 was the tollage on private boats and rafts.

Traffic

47. The table below gives the usual particulars regarding the traffic for the last ten years :—

COMPARISON OF TRAFFIC

Description		1877 78	1878 79	1879 80	1880-81	1881 82	1882 83	1883-84	1884-85	1885 86.	1886-87
Miles open	No	53	53	53	53	53	53	53	53	53	53
Toll collections	Rs	1,06 917	77 310	91 811	77 149	98 080	1,06,157	1 08 911	1,19,707	1,15 331	(a)1,01,054
Rate of tolls per mile		017	1 454	1 713	1 4 5	1,850	2,102	051	2,250	2,184	1,906
Number of boats	No	52 251	48 2[illegible]	52 044	45 [illegible]	51 [illegible]	5[illegible] 84	52 [illegible]	47,85[illegible]	42 24[illegible]	(c)45,709
Tonnage of „	Tons	380 968	290 188	[illegible]27	293 451	332 32	360 971	[illegible] 971	411,379	372,69[illegible]	(d)387,440
Passengers carried	No	125,0[illegible]	128 098	180,294	166,2[illegible]8	202 020	181 51	170,715			(b)112,139
Estimated value of cargo	Rs	1 71,09,884	1,50,51 5[illegible]	1 59,41 406	1,41,15,668	1 47,79,79	1,69,43,032	1 79,53,400	1 57,52 997	1,27,32,175	97,25,587

NOTE —Length open is inclusive of river crossings
(a) Exclusive of Rs 8 639 tolls from Steam Navigation Company
(b) Exclusive of 96 413 passengers carried by Company's steamer
(c) Includes 15,0[illegible] passenger boats and 1[illegible]87 empty boats
(d) Includes 81,419 and 41,154 tons passenger and empty boats respectively

There was a very considerable falling off in the toll collections. Of the total number of boats plying, the number carrying cargo was 18,466 against 19,892 for the previous year. This decrease is due to the slackness in the export trade of grain on account of its low price in the Calcutta market. The number of boats and the gross tonnage shows an increase, but this is chiefly under the head of passenger boats, the number being 15,066 against 7,788 for the previous year

Miscellaneous.

48. The collections of the year under the head 'Miscellaneous" aggregated Rs. 15,658 against Rs. 16,197 collected during the year 1885-86.

Revenue and working expenses

49. The statements below show the receipts on revenue account and working expenses of the Midnapore canal since 1877-78; the figures are for direct charges only :—

REVENUE RECEIPTS

Years	Water rates	Navigation	Miscellaneous	Total
	Rs.	Rs.	Rs	Rs.
1877-78	53,183	1,06,917	9,693	1,70,093

MAINTENANCE.

50. On head works the expenditure was Rs. 9.149 against Rs. 12,864 in the previous year. The expenditure on weirs was Rs. 1·60 per foot run of the Midnapore weir, and Rs. 3·92 for the Panchkura weir, against Rs. 3·24 and Rs. 1·13, respectively, the year previous. Repairs to the under sluices of the former were omitted, as there was no closure of the upper reaches, and in the case of the latter weir extensive repairs were carried out to the under sluice shutters.

The following table shows the maintenance charges per mile of main canal and distributaries since the year 1880-81 :—

Year.	Main canal. Length of canal, exclusive of river crossings.	Main canal. Total cost of work.	Main canal. Rate per mile.	Distributaries. Length of distributary channels.	Distributaries. Total cost of works.	Distributaries. Rate per mile.
	Miles.	Rs.	Rs.	Miles.	Rs.	Rs.
1880-81	48	80,993	1,687	267	20,140	·75
1881-82	48	1,03,910	2,164	277	11,854	42
1882-83	48	1,01,821	2,121	277	20,407	73
1883-84	48	1,06,425	2,216	277	21,105	76
1884-85	48	1,15 171	2,399	277	18,865	68
1885-86	48	1,10,350	2,299	277	14,424	52
1886-87	48	1,20,135	2,503	283	17,617	63

NOTE.—The increase in the length of distributaries is not due to any additional length completed during the year, but to the correct measurement being given.

The expenditure on main canal includes the head works and, as well as the expenditure on distributaries, shows an increase over that of the previous year Exceptional repairs and alterations were carried out on the tidal locks at a cost of Rs. 36,892 against Rs. 13,694 and Rs. 7,184 during the two preceding years. Special repairs were also carried out to the Danian lock at a cost of Rs. 5,967. Under earthwork Rs. 23,043 was expended in the silt clearance of the tidal reaches by hand labour, a quantity of 4,555,514 cubic feet being removed at a cost of Rs 5-10-9 per 1,000 cubic feet. The silt clearance of the first reach of the canal was again omitted this year. The cost of silt clearance by dredging was Rs. 22,688.

DREDGING.

51. The only silt clearance carried out by dredging was in the lock entrances of the tidal reaches, very little work being done in the reaches themselves which, as stated above, were cleared by hand. The outturn of the hydraulic dredgers *Atlas* and *Ajax* averaged 2,775 and 6,200 cubic feet per day respectively, not by any means a favourable result, but one which would be accounted for by the work being carried out in a tide-way and with frequent interruptions. The cost of excavation in the case of the *Ajax* was Rs. 4·13 per 1,000 cubic feet, and in the case of the *Atlas* Rs. 18·83. The former rate is an improvement on that of the preceding year, while the latter is exceptionally high, and due to the *Atlas* requiring thorough repairs. The total quantity of work done by all dredgers was 2,496,525 cubic feet at a cost, including removal of silt in barges, of Rs. 9-1 per 1,000 cubic feet.

RECEIPTS AND EXPENDITURE.

52. The subjoined table shows the receipts and expenditure, including indirect charges, for the last five years, and the net revenue :—

Year.	Receipts.	Expenditure.	Net revenue.
	Rs.	Rs.	Rs.
1882-83	2,68,010	2,46,502	+21,508
1883-84	2,64,576	2,23,586	+40,990
1884-85	2,57,955	2,31,915	+26,040
1885-86	2,62,484	2,18,127	+44,357
1886-87	2,34,185	2,35,249	— 1,064

The result for the year is most disappointing, and is mainly due to the diminished receipts on account of navigation and the increased expenditure on account of the special repairs to tidal locks.

HIDGELLEE TIDAL CANAL

53. The Capital, Interest, and Revenue Accounts are given below:—

1.—CAPITAL ACCOUNT.

CAPITAL ACCOUNT

Heads of Account	Outlay during 1886-87	Outlay to end of 1886-87

The works of which this canal consists were completed in 1873. A supplementary estimate for this project, amounting to Rs. 10,39,571, was submitted in March 1886 to the Government of India in connection with the revised estimate for the Orissa Coast Canal. It has been received back for further information regarding its financial prospects, and is being further revised on account of alteration in the works, but is expected to be ready for resubmission on an early date.

The interest charges have been recalculated from the commencement in accordance with the orders of the Government of India The total receipts on revenue account were Rs. 54,404 against Rs. 52,455 for the previous year. The increase is due to miscellaneous receipts entirely, the navigation receipts being Rs. 51,904 against Rs. 52,143 for 1885-86.

TRAFFIC.

54 The table below gives the usual particulars regarding the traffic since the year 1877-78.

COMPARISON OF TRAFFIC.

PARTICULARS.		1877-78.	1878-79.	1879-80.	1880-81.	1881-82.	1882-83.	1883-84.	1884-85.	1885-86.	1886-87.
Miles open ...	No.	29	29	29	29	29	29	29	29	29	29
Toll collections	Rs.	60,971	59,723	44,918	53,338	45,848	43,694	62,317	41,382	52,143	51,904
Rate of tolls per mile of canal ...	Rs.	2,102·42	2,059·41	1,548·89	1,839·20	1,581·00	1,510·00	2,148·00	1,427·00	1,798·03	1,789·79
Number of boats ..	No	23,882	22,969	16,311	21,783	20,057	17,415	22,728	17,060	19,316	17,512
Tonnage of do. ...	Tons.	158,433	164,688	1,20,021	1,57,781	1,33,020	1,32,884	1,96,764	1,45,424	1,63,535	149,747
Passengers carried ...	No.	1,932	3,623	3,061	3,531	3,286	3,510	...	......	......	8,569
Estimated value of cargo	Rs.	31,30,503	41,55,353	25,86,031	23,34,731	21,19,855	23,83,244	36,42,029	30,06,852	32,74,961	31,48,826

The traffic in grain was slightly less than that of the previous year owing, it is believed, to the price of rice and paddy having fallen in the Calcutta market.

It is probable, however, that, but for the silted up state of this canal, the traffic would have shown on the whole an increase.

MISCELLANEOUS RECEIPTS.

55. There was an increase of Rs. 2,188 in miscellaneous receipts, chiefly on account of fisheries.

REVENUE RECEIPTS AND WORKING EXPENSES.

56. The following tables show the receipts on revenue account and working expenses of the canal for the last ten years; the figures are for direct charges only:—

REVENUE RECEIPTS.

YEAR.	Navigation.	Miscellaneous.	Total.	Working expenses.	Net revenue.
	Rs.	Rs.	Rs.	Rs.	Rs.
1877-78 ...	60,971	1,309	62,280	30,564	31,716
1878-79 ..	59,723	1,070	60,793	23,180	37,613
1879-80 ...	44,918	863	45,781	42,284	3,497
1880-81 ...	53,338	1,149	54,487	25,590	28,897
1881-82 ...	45,848	1,446	47,294	28,678	18,616
1882-83 ..	43,694	1,338	45,032	40,570	4,462
1883-84 ...	62,317	1,273	63,590	46,581	17,009
1884-85 ...	41,382	2,125	43,507	36,886	6,621
1885-86 ...	52,143	312	52,455	48,609	3,846
1886-87 ...	51 904	2,500	54,404	22,835	31,569

WORKING EXPENSES.

PARTICULARS.	1877-78.	1878-79.	1879-80.	1880-81.	1881-82.	1882-83	1883-84.	1884-85.	1885-86.	1886-87.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Maintenance and repairs ...	22,469	16,599	30,607	18,901	19,478	29,460	32,994	26,862	34,099	11,968
Establishment	5,466	3,854	8,794	2,289	4,497	6,775	7,588	6,178	7,843	2,756
Tools and plant	164	......	......	1,444	1,834	1,362	2,784	292	3,524	4,155
Total ...	28,099	20,453	39,401	22,634	25,809	37,597	43,366	33,332	45,466	18,899
Navigation establishment ...	2,465	2,727	2,883	2,956	2,869	2,973	3,215	3,554	3,143	3,026
Refunds of revenue	......	......	......	......	......	......	......	......	......	910
Total working expenses ...	30,564	23,180	42,284	25,590	28,678	40,570	46,581	36,886	48,609	22,835

The decrease in working expenses and consequent increased profit is due to the silt clearance of the canal having been postponed pending the consideration of the estimate for remodelling the canal.

SONE CANALS.

57. The Capital, Interest and Revenue Accounts of these canals are given below:— CAPITAL ACCOUNT.

1.—CAPITAL ACCOUNT.

HEADS OF ACCOUNT.	Outlay during 1886-87.	Outlay to end of 1886-87.

EARNINGS.

58. The income and expenditure calculated on "earnings" of the year are shown below: direct charges only are given:—

EXPENDITURE.	Amount.	EARNINGS.	Amount.
I.—Maintenance and Repairs.	Rs.		Rs.
Repairs	3,08,757	Water-rates	6,95,086
Compensation	8	Navigation	54,254
Establishment, including direction and accounts	71,066	Miscellaneous	37,714
Tools and plant	27,698		
Total ...	4,07,529		
II.—Revenue management.			
Irrigation establishment ...	1,43,660		
Navigation establishment ...	14,535		
Total ...	1,58,195		
III.—Refunds of Revenue.	15,737		
Total working expenses ...	5,81,461		
Profit	2,05,593		
Total ...	7,87,054	Total ...	7,87,054

The water-rates "earned" during the year on the Sone Canals represent the amount of the demand statements which reached the Collectors during the year.

LENGTHS OF CANALS.

59. The areas commanded and irrigable, and lengths of canals and distributaries open, are shown in the table following:—

DIVISION.	Navigable canals.	Branch canals.	Distributaries.	Gross area under command.	Maximum discharge of canal.	AREA WHICH CAN BE IRRIGATED.		
						Kharif.	Rabi.	Total.
	Miles.	Miles.	Miles.	Acres.	Cubic feet per second.	Acres.	Acres.	Acres.
Eastern Sone	86¼	......	357	406,155	1,613	129,040	180,000	309,040
Arrah	70	71½	467½	618,354	} 4,342	} 347,360	} 360,000	} 707,360
Buxar	62½	77¼	333¾	704,000				
Total ...	218¾	148¾	1,158¼	1,728,509	5,955	476,400	540,000	1,016,400

A length of $4\frac{1}{4}$ miles, from mile 5 to mile $9\frac{1}{4}$, has been transferred from the Arrah to the Buxar Division.

A length of five miles of distributary only was added to the total length of channels in the Eastern Sone Division. At the same time there has been a correction of one and-a-half miles less in the channels of the Arrah Canal, and the net result therefore is an increase of three and-a-half miles to the length of distributary channels.

60. The area irrigable is calculated for kharif at 80 acres per cubic foot of maximum discharge, and for rabi at 180 acres per cubic foot, allowing 3,000 cubic feet per second as the available supply. Of the total area commanded 1,728,509 acres, 1,350,396 are said to be cultivable, so that the areas which can be irrigated in the kharif and rabi, respectively, as shown by the above statement, represent about 35 and 40 per cent. of the culturable area. But, as mentioned in last year's report, the kharif irrigation has never yet reached 250,000 acres (exclusive of sugarcane), and it is doubtful whether it will ever be possible, for reasons then stated, to irrigate eventually more than two-thirds of the estimated kharif area, or whether more than one-fifth of the estimated rabi area will ever require canal water. It is probable, therefore, that 24 and 8 per cent. of the culturable area represent more correctly the areas which can be irrigated in the kharif and rabi respectively.

61. The following table shows the progress made with village channels and outlets :—

VILLAGE CHANNELS.

Division.	Total length of village channels completed.	Total number of temporary and permanent outlets.	Number of permanent outlets.
	Miles.	No.	No.
Eastern Sone Division	245½	1,988	26
Arrah Division	765½	2,126	497
Buxar „	507	1,538	131
Total 1886-87 ...	1 518	5,652	654
Total 1885-86	1,505	5,907	618

Of the total length of 1,518 miles of village channels completed, only 178 miles were constructed by Government agency, and the remaining 1,340 miles by private individuals. The latter figures are merely approximate

A material reduction has been made in the number of temporary outlets in the Arrah and Eastern Sone Divisions.

62. The statements below furnish the rainfall statistics of the Sone Canal system from the year 1882-83, and the distribution by canal divisions for three years :—

RAINFALL.

		Average of 22 stations.				
		1886-87	1885-86.	1884-85.	1883-84.	1882-83.
		Inches.	Inches.	Inches.	Inches.	Inches.

	Whole year ...	59·31	44 99	30 29	35 18	35 83

Years.	Eastern Sone Division.			Arrah Division.			Buxar Division.		
	Kharif season.	Rabi season.	Whole year.	Kharif season.	Rabi season.	Whole year.	Kharif season.	Rabi season.	Whole year.
	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.	Inches.
1886-87	34·60	1·78	62·14	36 40	1 83	62 30	25 48	1·85	51·06
1885-86	30·25	2·15	40·54	27 02	2·84	44·68	27 82	2·92	42 29
1884-85 .	17·11	0 49	30·57	18·84	0 54	31 62	20 96	0 60	31·87

The rainfall of the year was exceptionally heavy, the average for 22 stations being 59 34 inches against an average yearly quantity for the whole area commanded by the Sone Canals of 40·89 inches. The Superintending Engineer remarks :—"In 1886-87, for the kharif season and the year the fall was much beyond that observed in the previous year, and also greatly in excess of the average. In the rabi season, compared with 1885-86, there was a falling off, but the rainfall in October 1886, 8·92 inches against 0·45 inches in October 1885, was so plentiful, and there was a further fall in January, that the character of the season for that crop was in reality much more favourable also. In point of fact the rainfall of the year was heavier, and as regards the crops better distributed than in any since 1869-70, when the Sone Canal project was taken in hand."

AREAS LEASED AND IRRIGATED

63. In former year's reports the areas assessed with water-rates within the year have been taken as the standpoint from which the irrigation for the year has been discussed. Exception was taken to this in last year's report, and an attempt made to give the areas actually irrigated within last year for the purposes of comparison. In this year's report this plan has been still further matured, and for preceding years the figures have, as far as practicable, been recast on the above lines, and only such figures used, except when it is otherwise specially stated. They will consequently differ in many cases from those given in preceding Revenue Reports.

64. The following statement shows the area leased and irrigated for three years:—

Description.	1886-87.		1885-86.		1884-85	
	Leased.	Irrigated.	Leased.	Irrigated.	Leased.	Irrigated.

Percentage of leased to irrigated area	92 02		83 89		77 55	

(a) Includes 68 acres leased after 1st April 1887, with effect from the 25th June 1886.
(b) Of the area actually irrigated in 1884-85 in the Arrah Division, and either not leased at all, or leased under annual leases, 5,729 acres were leased under five-year leases in 1885-86, with effect from 1st April 1884.

The Superintending Engineer remarks that a small proportion of the leased area was not irrigated on account of timely rainfall.

The result of the year's operations shows a falling off of 32,191 acres in the area leased from that of the previous year. The area irrigated was less by 64,366 acres, of which more than two-thirds was the deficiency in the Buxar Division. The deficiency is sufficiently accounted for by the abnormal quantity of rain.

FIVE-YEAR LEASES

It is satisfactory, however, that in a year of such favourable rainfall the area under five-year leases continued to increase, more especially taking into account that leases for 39,075 acres fell in during the year. New five-year leases, either renewals or fresh leases, were issued for 59,665 acres.

ASSESSMENT

The area of all crops grown in the year, assessed during the year, deducting that cancelled in khationies, was 264,744 acres against 246,812 leased. In addition to the above, 30,886 acres, appertaining to the irrigation of 1885-86, were assessed, making a total of 295,630 acres, on which the earnings of the year should be calculated.

The improvement in the proportion of the area irrigated for which leases had been previously granted continues.

Taking into account five-year leases, the following are the irrigated areas by crops compared with those of the previous year:—

	1886 87	1885-86.	Difference.
	Acres.	Acres.	Acres.
Kharif	177,510	217,072	—39,562
Rabi	45,361	77,079	—31,718
Sugarcane	30,055	27,562	+2,493
Hot weather ...	15,278	10,857	+4,421
Total ...	268,204	332,570	—64,366

In dividing the area under five-year leases under kharif, rabi and sugarcane in the Buxar Division, $\frac{8}{12}$ths of the total area is taken as kharif, $\frac{3}{12}$ths rabi,

and $\frac{1}{12}$th sugarcane. For the other divisions, $\frac{8}{10}$ths is taken as kharif and $\frac{1}{10}$th each rabi and sugarcane. The Superintending Engineer states that these proportions have been shown to be approximately correct.

AREAS IRRIGATED

The areas actually irrigated in each of the Executive divisions during the last five years are shown below:—

YEAR.	Eastern Sone Division.				Arrah Division.				Buxar Division.				Total for all Divisions.			
	Annual leases				Annual leases.				Annual leases.				Annual leases.			
	Kharif and rabi.	Sugarcane and hot weather.	Five-year leases.	Total.	Kharif and rabi.	Sugarcane and hot weather.	Five-year leases.	Total.	Kharif and rabi.	Sugarcane and hot weather.	Five-year leases.	Total.	Kharif and rabi.	Sugarcane and hot weather.	Five-year leases.	Total.
	Acres.	Acres	Acres	Acres	Acres	Acres	Acres	Acres.	Acres.	Acres	Acres.	Acres.	Acres.	Acres	Acres.	Acres.
1882-83	17,717	3,917	11,136	32 770	36,164	7,926	53 030	97,130	27,632	5,903	10,389	43,924	81 513	17,758	74,555	173,824
1883-84	36,090	150	18,620	54,860	96 591	10,073	56,372	163 038	101,613	4,143	26,110	131,876	234,036	15 251	101 328	350,614
1884-85	46,581	1,328	25 186	73 095	97 490	4 556	82,373	184 419	64 909	4 387	43 811	113 047	208 930	10,221	151 510	370 661
1885-86	20,294	1,041	27,945	49,280	54,068	6,821	95,232	157 021	56,140	13,598	56 607	126 289	131,402	21,184	179 784	332 570
1886-87	11,869	1,316	34,194	47,379	21,710	20,300	98,737	140,747	13,165	5,288	61,625	80,078	46,744	26,904	194 556	268,204

The figures used in the corresponding statement of the previous year's report represent the areas *assessed*; those now given are the areas *actually irrigated*, except for the two years 1882 83 and 1883-84, for which the latter are not available.

FLOW AND LIFT

65. The proportion of *flow* to *lift* irrigation was 96·5, to 3 5—the figures for the last three years are—1885-86, 95 to 5; 1884-85, 93 to 7; and 1883-84, 90 to 10.

DUTY

66. The following statement shews the duty obtaining in the year under review and in the previous one:—

			Eastern Main Canal Series	Arrah Canal System	Buxar Canal System	Western Main Canal Series	Sone Canals
1886-87	Kharif	Acres ..	4,358	107,621	59,586	167,207	207,565
		Duty on gross supply	56·3	107·1	142·8	114·8	95·5
	Rabi	Acres	10,143	35,182	30 ? 91	65,273	5,416
		Duty on gross supply	46·7	65·1	148·9	87·9	78·6
1885-86	Kharif	Acres ..	39,532	121,441	80 661	205,102	244,634
		Duty on gross supply	45 4	88·7	97 0	93 6	79·9
	Rabi	Acres	19,324	44,946	47,371	92,317	104,641
		Duty on gross supply	42·6	128·0	116 1	121·7	99·9

The duty for kharif is calculated on the supply entering the canals during the three months, August to October, and that for rabi on the discharge utilised during the four months, November to February. This method was first adopted in the report for the year 1884-85, and has been continued since.

The increased duty in the kharif season is attributed to the plentiful and seasonable rainfall, so much water not being required for rice irrigation as was necessary in the year preceding. The gross average discharge of the canals in the kharif season fell from 3,059 cubic feet per second in 1885-86 to 2,172 cubic feet in 1886-87. The low duty in the Eastern Sone Division is accounted for by the great percolation in some parts of the division owing to the sandy nature of the soil. The Superintending Engineer states that—"The main reason of the lower duty in the rabi season is that only water escaping from canals is excluded in calculating the duty, the whole of that admitted into distributaries being taken into account. The supply in distributaries has to be kept above what is actually necessary for irrigation to admit of the level of the water therein reaching the height necessary for flow irrigation, and the percentage of water wasted is also higher on a smaller area." For the purposes of comparing with other canal systems the duties on discharge utilised must be taken for the the kharif, and from Form I. E. these appear to be:—

Eastern Main Canal Series	94 2
Western " " "	190·6
Sone Canals generally	159 0

But it must be remembered that the figures given in connection with the kharif are taken with reference to the three months, August to October, only.

CROP EXPERIMENTS.

67. Experiments were carried out on crops irrigated by canal water in 263 cases, and in 256 on crops irrigated from other sources. The result is in favour of canal irrigation for the rice crop, the average yield being 17 maunds 3 seers of grain and 31 maunds 14 seers of straw, or 2 maunds 12 seers of grain and 1 maund 1 seer of straw in excess of the yield from other irrigation. In the case of rabi crops, on the other hand, the yield is slightly in favour of irrigation from wells and aharas.

DEMANDS.

68. The following statement shows the demands, collections, and balance of water-rates for five years:—

Years.	Demand.			Remissions.	Net demand.	Collections.	Balance.	Percentage of collections to current demand.
	Arrears.	Current.	Total.					
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1882-83	4,36,849	4,62,301	8,99,150	21,020	8,78,130	5,66,465	3,11,665	122·5
1883-84	3,11,665	7,42,311	10,53,976	1,45,974	9,08,002	4,84,209	4,23,793	65·2
1884-85	4,23,793	11,15,399	15,39,192	73,625	14,65,567	7,70,359	6,95,208	69·0
1885-86	6,95,208	8,07,702	15,02,910	1,26,266	13,76,644	9,78,323	3,98,321	121·1
1886-87	3,98,321	6,95,086	10,93,407	35,364	10,58,043	8,26,461	2,31,582	118·9

The figures in the above statement are taken from those compiled by the Examiner of Accounts. The amount of arrears at the commencement and the outstanding balance at the end of the year under review, together with the amount of remissions, agree with the figures given in the statement furnished by the Commissioner and Collectors. The Examiner's figures for current demand and collections are, however, in excess of those given by the above officers. The chief reason of the discrepancies being that miscellaneous assessments and collections made by the Collector of Shahabad are omitted by the latter. Minor discrepancies exist also, which render a complete comparison of the statements given by different officers impracticable, though the Superintending Engineer explains them as far as is possible. The Examiner's figures have been adopted in the following paragraphs, except where otherwise stated.

COLLECTIONS.

69. All arrears for years previous to 1880-81 were cleared off in 1885-86, and the opening balance of 1886-87 included therefore only outstandings from 1880-81 up to the end of 1885-86, which amounted to Rs. 3,98,321. According to Collector's statements further demands for previous years, amounting to Rs. 68,609, were made during 1886-87, bringing up the total for recovery on account of irrigation effected in previous years to Rs. 4,66,930. Of this amount Rs. 3,46,381 was collected, and Rs. 33,708 remitted and written off as irrecoverable, leaving the balance of Rs. 86,391 outstanding at the end of 1886-87 on account of previous years against a balance of Rs. 1,55,000 as shown in round numbers in arrears in the previous year's report.

Assessments for irrigation of 1886-87 were made according to Collectors' returns to the amount of Rs. 6,21,156, of which Rs 4,74,332 was collected and Rs 1,657 remitted, leaving a balance for collection of Rs. 1,45,168.

The outstanding balance at the end of the year was thus Rs. 2,31,559 according to Collectors' statements against Rs. 2,31,582 as reported by Examiner. Of the above sum, Rs. 43,645 on account of assessment for rabi irrigation, though due, was not legally payable till after the close of the year.

ARREARS.

70. The outstandings at the end of 1886-87 are compared below with those of the previous year:—

	1886-87.	1885-86.
	Rs.	Rs.
Arrears of previous years	86,391	1,55,000
Arrears of year payable within the year	1,01,523	1,31,000
Total legally due ...	1,87,914	2,86,000
Arrears of year due but not payable	43,645	1,12,000
Total ...	2,31,559	3,98,000

The following statement gives a comparison by districts of the result as shown in the previous paragraph of the operations of the year:—

Districts.	Arrears due for irrigation effected in previous years.				Demands for irrigation effected in year.			
	Percentage of total demands.				Percentage of total demands.			
	Demand.	Collections.	Remissions.	Outstanding at end of year.	Demand.	Collections.	Remissions.	Outstanding at end of year.
Shahabad—								
1886-87	100·0	77·3	8·8	13·9	100·0	83·4	0·26	16·34
1885-86	100·0	64·8	15·3	19·9	100·0	72·3	0·3	27·4
Patna—								
1886-87	100·0	47·0	1·5	51·5	100·0	33·9	0·04	66·06
1885-86	100·0	53·4	11·3	35·3	100·0	31·4	0·2	68·4
Gya—								
1886-87	100·0	88·5	3·0	8·5	100·0	46·4	0·47	53·13
1885-86	100·0	67·8	27·2	5·0	100·0	37·1	1·5	61·4
Average—								
1886-87	100·0	74·3	7·2	18·5	100·0	76·35	0·25	23·4
1885-86	100·0	63·7	16·0	20·3	100·0	66·5	0·4	33·1

The result of the year's operations shows a very decided improvement in the collections both of arrears and of the current demand in all districts, except in Patna in the case of arrears. Taking the total demand under both heads, the Commissioner writes:—"In Shahabad more than three-fourths, and in Gya "more than half of the total demand was adjusted during the year under report, "while the adjustment in Patna was less than half of the total demand—a result "which is far from satisfactory. In Patna the bad collections of the year under "report were, among other causes, mostly due to the apathy and incompetence "of the former circle officer, whose services were dispensed with in March last. "It is hoped that future reports will show better results. The balances at the "close of the year have been largely reduced in all districts, specially in Shahabad "as compared with the balances with which the year opened."

The system of collection introduced during the previous year worked well, and on this point the Collector of Shahabad remarks:—"In the beginning "I feared that the enforcement of payment of rates in full according to each "receipt might retard collections, but happily my apprehensions have proved "groundless." The most favourable results have again been obtained in the Shahabad district, where by far the greater portion of the work is carried out, the total demand for the year in that district being Rs. 8,70,871 against Rs. 2,17,213 for Patna and Gya combined.

The collections in all districts aggregated Rs. 8,26,461 against Rs. 9,78,323 in the previous year. The decrease is attributable to the seasonable nature of the rainfall, which was unfavourable to leasing, and also to the great reduction in arrears effected in the two previous years.

71. The remissions for the year amounted to comparatively a very small sum, the total amount remitted being— REMISSIONS.

		Rs.
By canal officers	... ...	13,279
" civil "	... ...	22,085
	Total ...	35,364

against Rs. 1,26,266 remitted in 1885-86. These figures are not, however, strictly comparable as explained below. Rupees 22,083 remitted by civil officers (Rs. 20,808 in the Shahabad district) is the amount of arrears written off as irrecoverable against Rs. 40,486 in 1885-86. The decrease is chiefly on

account of the large adjustments of arrears made in the previous two years. As regards remissions by canal officers the amount of Rs. 13,279, which appears in the accounts of the Examiner and Collection Department, does not take into account the sum of cancelled khationies, Rs. 85,780, which the corresponding figures for the previous year included. In the statement given by the Superintending Engineer the remissions plus the *refunds* are shown as Rs. 21,055; in addition to which khationies for the amount of Rs. 13,585* were cancelled, making a total of Rs. 34,640 against Rs. 87,344 in 1885-86 and Rs. 53,966 in 1884-85.

* Of these Rs. 6,090 were replaced by fresh khationies in the following amounts:—
Rs. 544 Owing to five-year leases being granted.
" 5,546 Owing to an assessment in a five-year lease extending over four years having been revised and replaced by a new demand statement for Rs. 5,144.
" 6,090

The remissions by canal officers may be divided thus—

	Percentage of remission and refunds to gross demand. 1886-87.	1885-86
Eastern Sone Division	0 68	11·8
Arrah Division	2·43	7·2
Buxar "	1·96	0·8

The result is very favourable, the proportion of remissions and refunds being insignificant.

REVENUE ESTABLISHMENTS

72. The expenditure on the revenue establishments employed is shown below:—

	1886 87		1885-86.	
	Amount.	Percentage on collections	Amount	Percentage on collections
	Rs.		Rs.	
Permanent and temporary establishments, such as zilladars, ameens &c. ...	53,914	6 52	56,110	5·73
Establishment employed under Collectors...	28,028	3·39	29,573	3·02
Headmen's and putwaries' fees	61,718	7·47	60,345	6·17
Total ...	1,43,660	17·38	1,46,028	14·92

The charges for establishment during the year 1886-87, as compared with the previous year, show a reduction of Rs. 2,368. The actual realisations of the year were, however, less than those of the previous year by Rs. 1,51,862. Notwithstanding the large reduction in the amount of collections, there is a small increase in the amount paid on account of headmen's and putwaries' fees, and this appears to demand explanation.

The following statement shows the cost of the establishment employed on assessments during the year. The areas assessed, as shown in the statement, are the gross areas assessed in the year less the areas under five-year leases in force at the beginning of the year:—

Division.	Areas measured and assessed.	Cost of measuring crop. Total.	Per acre.	Cost of preparing demand statements. Total.	Per acre.
	Acres	Rs.	Pies.	Rs.	Pies.
Eastern Sone ...	25,789	1,297	9·65	634	4·72
Arrah	81,150	4,923	11 64	3,575	14·37
Buxar	26,041	1,741	12 83	745	5·49
Total 1886-87 ...	132,980	7,961	11 49	4,954	7·15
Total 1885-86 ..	159,294	7,869	9 48	5,944	7 16

The foregoing figures are approximate only, as the whole establishment was never exclusively employed on any special crop. Charges for one year's crop are disbursed in another, and there are other disturbing causes. The charge

per acre for measuring crop has again increased, it having been 5·91 pies per acre in 1884-85 on an average assessed of 255,255 acres. This appears to be due to the actual expenditure being, more or less, mainly either fixed or fluctuating with the total area, so that the charge per acre is almost entirely dependent on the area leased during the year, and varying inversely with it.

PUTWARIES

73. As regards the attendance of putwaries at measurements, the Superintending Engineer observes:—"Generally speaking there has been but little improvement, and in some cases the reverse in the percentage of measurements attended by putwaries. It is not easy to give a satisfactory explanation of the falling off, but it is probably partially due to the non-payment of fees in the case of five-year leases. The putwaries invariably receive notice of measurement, but their attendance is voluntary, and there are understood to be reasons against making it compulsory by legislation."

COMPLAINTS.

74. The number of complaints pending at the beginning of the year and received during the year was 6,021, of which 5,420 were disposed of within the year. The corresponding number of complaints in 1885-86 were 13,589, so that the assessments would appear to have given rise to less objections than before. Four hundred and three miscellaneous petitions were received, of which 386 were disposed of. Thirteen cases were tried by Engineers vested with magisterial powers.

UNAUTHORISED IRRIGATION

75. There is nothing to show how many of the above complaints were in connection with unauthorised or surreptitious irrigation, the remissions even not having been classified by the Superintending Engineer as was done last year. But undoubtedly some were under this head; and it is probable that, with the whole number so largely diminished, there was a decrease under this particular head also, and that this source of irritation, to which the late agitation was in some degree due, was the cause of less friction than formerly. In future detailed information regarding complaints, as has already been pointed out in the case of the Orissa and Midnapore Canals (paragraphs 18 and 41), ought to be given by the officers concerned in their reports.

CERTIFICATE PROCEDURE.

76. There was an increase in the number of certificates filed in the Patna district, 2,512, against 1,794 during the previous year. Of these 1,176 were enforced, realising Rs. 3,334-4. In Gya no certificates were filed. In Shahabad 8,826 cases were instituted against 14,145 for the previous year. There were also 8,089 cases pending from the previous year. Of these 10,223 were disposed of, realising Rs. 47,786, or 5 7 per cent. of the total collections. Six thousand six hundred and ninety-two cases remained pending at the close of the year. On this subject the Commissioner remarks:—

"The number of institutions has diminished considerably. They were generally on account of arrears of old standing which were suffered to accrue under the old system, and which it was found impossible to realise without coercive measures. The number, however, bears a very small proportion to the total number of rate-payers. The old arrears having now been nearly cleared off, there will be less necessity for recourse to coercive measures in future."

GENERAL REMARKS

77. The Collector of Shahabad in his report remarks on the defects existing in the present system of assessments, preparation of khationies and disposal of complaints, giving an opinion that matters may be improved by the extension of the long-lease system. His remarks are worthy of consideration, but as in consequence of the numerous complaints that have been received, a Commission has been appointed by the Lieutenant-Governor to enquire into the whole question of the working of the system in vogue on the Sone canals, His Honour being of opinion that the matter could not successfully be disposed of otherwise, and the investigations of the Commission are now being carried on, there is every reason to hope that the searching enquiry instituted will result in recommendations which, followed by a revision, if necessary, of the Act and the rules in force under the Act, will enable matters to be settled by the assessing and collecting officers with a much less degree of friction than is at present experienced. It may be observed, however, here that the stringent measures recently introduced to enforce payments of rates has placed matters on a considerably better footing, and that any procedure, which has for its object the early filing of complaints, the dealing with them quickly and *finally* (so far, at any rate, as the mere fact of irrigation or non-irrigation is concerned) and the prompt realisation of the demands certified as correct, will, in

the end, tend to make the cultivator appreciate both the benefits of irrigation and his own responsibilities in connection with it and enable the Government to collect its just dues.

NAVIGATION

78. The tables below show the navigation revenue and tollage receipts for the last five years :—

NAVIGATION RECEIPTS.

YEAR.	EASTERN MAIN SERIES.			WESTERN MAIN SERIES.			Total.	Total tollage only.
	Number of miles open	Tollage receipts.	Transport service receipts	Number of miles open.	Tollage receipts	Transport service receipts.		
	No	Rs	Rs.	No	Rs.	Rs.	Rs.	Rs.
1882 83 ...	86½	22 679	12 196	182½	16,625	19,705	71,205	39,304
1883-84 .	86½	22,563	6 305	182½	25 469	30,856	85,193	48,032
1884 85 . ..	86½	23 055	1,304	182½	14 280	13 122	51,761	37,335
1885 86 .	86½	19 579	..	182½	22,133	4,531	46,243	41,712

* These receipts are not on account of transport service, but for hire of steamers, fines and sundries.

TOLLAGE (ASSESSED).

YEAR.	Patna Canal system – Eastern Main Canal Series.	Arrah Canal system.	Buxar Canal system.	TOTAL.
	Rs.	Rs.	Rs.	Rs.
1882-83	22,772	13,836	2,454	39,062
1883-84	22,206	19,791	5,593	47,590
1884-85	23,142	10,316	3,937	37,395
1885-86	19,523	14,808	7,388	41,719
1886-87	22,646	18,289	9,001	49,936

NOTE—The figures in these two statements do not agree the reason being that the first statement is prepared from the Examiner's returns while the second has to be based on returns obtained from the Superintending Engineer, and there are some unadjustable discrepancies between them

A fair increase in the traffic is apparent on all canals.

TRAFFIC

79. The following statement compares the traffic of the year 1886-87 with that of the four preceding years :—

		1886 87	1885-86	1884-85	1883-84.	1882-83.
Number of miles open at the end of the year	Miles	218½	218½	218½	218½	218½
Toll collections .	Rs	49,665	41,712	37,335	48,032	39,304
Rate of toll per mile ...	,,	227	190	170	217	180
Boats, including empties	No	8 573	7,210	6,434	8,822	7,615
Measured tonnage of boats	Tons	104,835	77,006	61,744	95,472	78,951
Estimated value of cargo	Rs	64,65,651	36,41,863	41,10,598	52 54,476	37,96,467

The increased value of goods carried is partly owing to the greater traffic and partly to specie carried for opium payments. The principal items of traffic are grain, oilseeds and timber, the down traffic being by far heavier than the up traffic. The most noticeable items on which there was an increase were grain, salt, building materials and miscellaneous. The cost of establishment employed on the collection of tolls and on locks was, according to Superintending Engineer, Rs. 13,379 against Rs. 13,644 in 1885-86. The charge is high, notwithstanding that the number of toll stations have been reduced, and is due to the great length of the canals and the small traffic.

TRANSPORT SERVICE.

80. There is a weekly steamer service maintained on the Patna canal, and a service twice a week on the Arrah and Buxar canals. These are in the hands of a contractor to whom three Government steamers are rented.

MILLS.

81. There are eight mills on the different canals, including a turbine on the Arrah canal at Nasrigunge. Three only of the small mills have afforded some return during the year. The total receipts under this head were Rs. 668

against an expenditure of Rs. 909. The excess expenditure is due chiefly to repairs to the turbine.

MISCELLANEOUS.

82. The miscellaneous receipts for the last five years are given in the following table:—

	1886-87.	1885-86.	1884-85.	1883-84.	1882-83.
	Rs.	Rs.	Rs.	Rs.	Rs.
Sale of water	702	1,742	582	399	630
Plantations	319	307	178	107	88
Other canal produce	2,904	2,424	1,339	2,047	2,662
Water powers	668	469	488	857	77
Rent of buildings	7,198	7,213	6,409	6,305	6,180
Fines	169	653	734	778	763
MISCELLANEOUS. Rent of lands ...	15,281	14,369	13,770	13,322	11,564
MISCELLANEOUS. Fisheries	565	421	732	350	553
MISCELLANEOUS. Cost of process ...	6,302	6,414	7,066	4,218	3,251
MISCELLANEOUS. Sale of old materials ...	443	355	405	55	422
MISCELLANEOUS. Other items ...	3,213	3,713	8,651	5,967	20,867
Total ...	37,714	38,080	40,354	34,405	47,007

The falling off under "sale of water," the only item calling for remark, was due to a large payment being made in 1885-86 by the East Indian Railway Company on account of arrears of previous years for water supplied to the Dinapore Railway station.

83. PLANTATIONS.—The state of the plantations in each division at the close of the years 1885-86 and 1886-87 is shown in the statement following:—

DIVISION.	1886-87.				1885-86.				Increase	Decrease
	Trees over 12 feet in height.	Saplings between 4 and 12 feet.	Seedlings under 4 feet.	Total.	Trees over 12 feet in height.	Saplings between 4 and 12 feet.	Seedlings under 4 feet.	Total.		
	No.	No.	No.	No.	No.	No.	No.	No	No.	No.
Eastern Sone Division	68,036	43,020	48,741	159,797	63,369	40,911	54,527	158,807	990	Nil.
Arrah Division	28,702	11,820	52,935	93,457	26,445	10,167	37,123	73,735	19,722	Nil.
Buxar " ...	9,899	5,156	12,263	27,318	9,414	3,351	9,660	22,425	4,893	Nil.
Total ...	106,637	59,996	113,939	280,572	99,228	54,429	101,310	254,967	25,605	Nil.

The receipts for the year amount to Rs. 319 against Rs. 307 credited in the year previous. The expenditure was wholly charged to Revenue, and was as follows:—

	Rs.
Eastern Sone Division	675
Arrah Division	2,849
Buxar "	1,665
Total ...	5,189

In the Arrah Division selected portions of the spoil banks were sown with babool seeds in the rains of 1886 and further extensions are now in hand. In all the divisions progress was made in planting out teak, sissoo, toon, and other valuable trees.

The figures given in paragraph 102 of last year's report were incorrect, those for wrong years having been given. The correction should be as follows:—

	Rs.		Rs.
For	39,246	*read*	38,080
"	47,007	"	40,354
"	16 per cent.	"	5·6 per cent.

FINANCIAL RESULTS.

84. The receipts on revenue account and working expenses (direct charges) of the Sone canals for the year 1886-87 and the four preceding years are shown in the statement below:—

	1886-87.	1885-86.	1884-85.	1883-84.	1882-83.
	Rs.	Rs.	Rs.	Rs.	Rs.
Receipts—					
Water-rates	8,26,461	9,78,323	7,70,359	4,84,209	5,66,465
Navigation	54,254	46,243	51,761	85,193	71,2C6
Miscellaneous	37,714	38,080	40,354	34,405	47,007
Total ...	9,18,429	10,62,646	8,62,474	6,03,807	6,84,677
Working expenses—					
Maintenance	4,07,529	3,80,929	4,50,313	3,74,795	4,02,841
Irrigation establishment ...	1,43,660	1,46,028	1,29,308	1,14,005	1,05,883
Navigation ditto ...	14,535	14,756	16,885	20,248	19,880
Refunds of revenue	15,737	10,657	7,455	5,429	1,237
Total ...	5,81,461	5,52,370	6,03,961	5,14,477	5,29,841
Net profit, exclusive of indirect charges	3,36,968	5,10,276	2,58,513	89,330	1,54,836

The decrease in the net revenue is due to the falling off in water-rates and increase in expenditure owing to heavy repairs to the weir.

REPAIRS TO HEAD WORKS.

85. The cost of repairs to head works was as follows:—

	1886-87.	1885-86.	1884-85.
	Rs.	Rs.	Rs.
Sone weir	68,570	34,908	29,922
Other works	10,419	7,697	9,462
Total ...	78,989	42,605	39,384

The increased expenditure on the head works is almost entirely due to the rebuilding of the Baroon and centre river sluice piers.

MAINTENANCE.

86. The following statement prepared from the Superintending Engineer's returns shows the expenditure on canals and distributaries in the different executive divisions compared with that of the previous year:—

	Arrah Division.		Buxar Division.		Eastern Sone Division.	
	1886-87.	1885-86.	1886-87.	1885-86.	1886-87.	1885-86.
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Western Main canal	36,928	64,288	9,054	4,248	..	......
Eastern ditto	......	......	......	......	16,107	28,497
Canal	29,796	23,388	18,454	9,494	24,090	21,196
Branch canals	11,796	13,052	12,863	9,212	......	......
Distributaries	25,433	31,350	17,778	13,444	15,879	13,692
Drainage and protective works	1,932	570	1,990	210	2,130	2,143
Total ...	1,05,885	1,32,648	60,139	36,608	58,266	65,528

The total cost of maintenance of canals in all divisions, exclusive of head-works and telegraph and telephone lines, was Rs. 2,24,290 against Rs. 2,34,784 for the year 1885-86. The figures do not quite agree with those given by the Examiner, but the discrepancy is small. The decrease of the cost in the Main Western canal is due to smaller expenditure on silt clearance owing to the lower average discharge of the canal during the flood months—1,461 cubic feet against 2,203 in 1885-86. This reason is also assigned for the lower expenditure in the Eastern Main canal. The increased expenditure in the Buxar Division is chiefly due to the postponement of as much as possible of the work in the previous year owing to want of funds. The average expenditure for the two years is slightly less than that actually incurred in 1884-85.

The expenditure per mile incurred on repairs to the canals and distributaries during the year 1886-87 and the two previous years is shown in the following statement:—

Canal.	Division.	1886-87.		1885-86.		1884-85.	
		Number of miles.	Cost per mile.	Number of miles.	Cost per mile.	Number of miles.	Cost per mile
		No.	Rs.	No.	Rs	No.	Rs.
Eastern Main canal ...	Eastern Sone	7½	2,915	7½	4,071	7½	3,019
Western ditto ...	Arrah	5	7,186	5	11,857*	5	11,488*
	Buxar	16½	546	16½	256*	16½	2,316*

Distributaries ...	Arrah	467½	54	469	66	460½	68
	Buxar	331½	53	318½	40	307½	46
	Eastern Sone	357	45	353	39	345	42

* The expenditure on the Western Main canal from miles 5 to 9 for the years 1884-85 and 1885-86 has been deducted from the Arrah Division, and added to the Buxar Division to which the miles have been transferred

87. The quantity of silt removed by dredgers in the Eastern Main canal was 1,864,643 cubic feet at a cost Rs. 6,955, or Rs. 3-11-8 per 1,000 cubic feet, which does not include the cost of removal of the silt from the towpath. Of the silt dredged 1,325,757 cubic feet were deposited on the bank and 538,886 discharged into the river. The average rate in the previous year was Rs. 4-4-8 per 1,000 cubic feet. The low rate in the present year is chiefly due to the dredging having been confined to places where the silt deposit was heavy, and consequently full loads were always brought up by the buckets. The total quantity of silt dredged in the river was 3,100,682 cubic feet, the rate being Rs. 1-15-6 per 1,000 cubic feet, and in the Main Western canal 4,176,601 cubic feet at a rate of Rs. 3-8-11 for silt delivered in punts at the side of the canals. Inclusive of the cost of removing the silt, the rates were respectively in the river and canal Rs 2,14-1 and Rs. 7-6-6. A large quantity of silt removed from the canal had to be carried over the spoil bank at a cost of Rs. 6 per 1,000 cubic feet. The Superintending Engineer remarks—"It is not possible, on the information available, to give, on the year's working the cost of silt clearance by the different classes of dredgers employed. This can best be determined by experiments extending over a limited time, which will be carried out."

DREDGING

Besides silt clearance by dredging a quantity of 1,105,522 was removed by hand from the Eastern Main canal at a rate of Rs. 4-6-4 for 1,000 cubic feet. In the Main Western canal a trifling amount only was thus removed at a total cost of Rs. 1,065. On the Arrah canal Rs. 1,370 was expended in dredging, and on silt clearance by hand Rs. 1,625. On the Buxar canal Rs. 51 was expended on silt clearance by hand.

88. The following statement shows the cost of weed-clearing during the year 1886-87 and the four preceding years:—

WEED-CLEARING

	1886-87.	1885-86.	1884-85	1883-84	1882-83
	Rs	Rs	Rs.	Rs.	Rs.
Eastern Sone Division ...	314	2,115	1,589	2,777	7,721
Arrah Division ...	2,218	2,491	3,976	5,948	6,627
Buxar do. ...	2,065	77	...	270	29
Total	4,597	4,683	5,565	8,995	14,377

Of the total expenditure of Rs. 4,597, the cost of working the steam weed-rake was Rs. 1,719, and the balance of Rs. 2,878 was expended in clearing by hand. The weeds in the Buxar canal were found to be specially troublesome, and for the first time during the last five years, it was necessary to spend a large sum in removing them In the Eastern Main canal the expenditure was less than usual.

CLOSURES.

89. The Main Eastern series of canals were closed for silt clearance from the 1st May to the 18th of June 1886, and the Main Western series from the 1st to the 10th of April.

FLOODS.

90. There was no high flood in the river Sone during the year. Owing to the heavy local rainfall there were high floods in all the minor streams. The Poonpoon river was in very high flood on the 8th and 9th of October 1886. The highest flood on record occurred in the Kao on the 7th October. The level of the water at the syphon aqueduct on the up stream side was R. L 331·00, or one foot below that of the masonry towpath, and on the down stream side R. L. 328·00.

CALCUTTA AND EASTERN CANALS.

DESCRIPTION.

91. A DESCRIPTION of these canals was given in the Revenue Report for 1885-86. No works have since been added, and the length of the different channels remains the same.

The revenue administration of the canals formerly vested in the Board of Revenue, passed into the hands of the Public Works Department on the 1st April 1886, and the Revenue Report has been submitted by the Superintending Engineer. The management of the Calcutta canals and Tolly's nullah is at present in the hands of the Collector and Supervisor under the immediate orders of the Superintending Engineer. The charge of the works and of the Eastern canals and steamer route is in the hands of the Executive Engineer.

92. The capital and revenue accounts of the Calcutta and Eastern canals are given below :—

1.—CAPITAL ACCOUNT.

HEADS OF ACCOUNT.	Outlay during 1886-87.	Outlay to end of 1886-87.
DIRECT CHARGES.	Rs.	Rs.

Profit	3,00,766	1,20,76,571			
Total ...	4,83,654	1,90,95,351	Total ...	4,83,654	1,90,95,351

NOTE.—(a) Approximate expenditure prior to the year 1861-62 as supplied by the Board of Revenue, Lower Provinces.
(b) It was mentioned in the foot-note to this statement in last year's Report that the figures are not quite accurate, certain receipts under "Navigation" having been shown as miscellaneous revenue;" the error has now been corrected by the transfer of Rs 21,561 from the latter to the former head.

The above statement is exclusive of indirect charges.

There is no interest account, the whole expenditure having been defrayed from Provincial funds.

93. The following statement shows the financial results of these canals for the last ten years. The figures are for direct charges only. The average net revenue has exceeded five and a half per cent. on the capital expenditure :—

FINANCIAL RESULTS

Year	Direct capital charges.		Direct receipts and outlay.			Percentage of net direct revenue to direct capital expenditure to end of year.
	During the year.	To end of the year.	Gross revenue.	Direct charges.	Net revenue.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1877-78 ...	14,143	31,68,162	4,41,208	1,84,599	2,56,609	8 1
1878-79 ...	1,38,127	33,06,289	4,01,535	1,70,264	2,31,271	6·9
1879-80 ...	2,54,181	35,60,470	3,44,565	1,88,778	1,55,787	4 3
1880-81 ...	6,14,495	41,74,965	4,14,145	2,15,601	1,98,544	4 7
1881-82 ...	5,50,123	47,25,088	4,82,407	3,27,254	1,55,213	3 2
1882-83 ...	3,15,059	50,40,147	5,64 194	3,20,265	2,43,929	4·8
1883-84 ...	1,52,297	51,92,444	5,64,101	2,20,624	3,43,477	6 6
1884-85 ...	9,197	52,01,641	(a)5,69,726	2,78,192	2,91,534	5 6
1885-86 ...	(—)42	51,59,067	(b)4,79,484	1,86,747	2,92,737	5 7
1886-87 ...	5,156	51,64,223	4,83,654	1,82,888	3,00,766	5 8

(a) Is Rs. 35,185 larger than it should be by reason of error of account.
(b) Is Rs. 35,185 smaller than it should be by reason of error of account.

The gross revenue of the year is not directly comparable with that of the two previous years for reasons given in the previous year's Revenue Report. The correct figures are Rs. 4,83,654 against Rs. 5,14,669 for the previous year and Rs. 5,34,541 for 1884-85. The net revenue corresponding is Rs. 3,00,766 against Rs. 3,27,920 for 1885-86 and Rs. 2,56,349 for 1884-85.

COLLECTIONS.

94. The following statement shows the details of the revenue collections:—

Canals.	Number of boats.	Receipts by Supervisor. — Boat route. — Toll collection on boats.	Demurrage on boats.	Total.	Rents of ferries, lands, buildings and fisheries.	Miscellaneous.	Total.	Steamer route. — Toll on steamers and flats.	Total collections by Supervisor.	Receipts by the Executive Engineer. — Rents of buildings and lands.	Miscellaneous.	Total.	Grand Total, gross revenue.
		Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
Calcutta and Eastern canals	75,720	3,58,731	702	3,59,433	5,462	693	3,65,568	4,365	3,69,933	2,606	......	2,606	3,72,539
Tolly's nullah	70,048	1,09,351	44	1,09,395	944	776	1,11,115	......	1,11,115	...	......	......	1,11,115
Total 1886-87 ...	145,768	4,68,082	746	4,68,828	6,396	1,459	4,76,683	4,365	4,81,048	2,606	......	2,606	4,83,654
Total 1885-86 ...	147,059	4,87,553	4,060	4,92,213	15,715	546	5,08,474	5,365	5,13,839	647	(—)35,002	(—)34,355	4,79,484

The gross revenue, as explained in the preceding paragraph, is Rs. 4,83,654 against Rs. 5,14,669 for the previous year. The decrease is attributable to—

(1) Abolition of return trip tolls.
(2) Transfer of canal lands to the Civil Department.
(3) Abolition of demurrage on dinghees.
(4) At the Dhappa toll station, dulness of jute and rice trade.
(5) At the Chitpore toll station, falling off in salt and coal.

BOATS.

95. The following statement shows the number of the different classes of boats entering the canals:—

	Number of boats of the following measurement by Canal Rules. — Up to 100 maunds.	Between 100 and 1,000 maunds.	Between 1,000 and 2,500 maunds.	Between 2,500 and 5,000 maunds.	Over 5,000 maunds.	Total.
Circular and Eastern canals ...	31,762	24,746	17,412	1,751	49	75,720
Tolly's nullah	17,227	19,031	5,040	54	......	41,361
Boats not classed, but being mostly small boats of less than 100 maunds paying toll at Russah ...	......	......	......	......	......	28,687
Total 1886-87 ...	48,989	43,777	23,461	1,805	49	145,768
Total 1885-86 ...	47,646	44,657	22,553	1,715	31	*147,059

* Includes 30,457 not classed.

There is a small increase apparent in the number of boats between 2,500 and 5,000 maunds and over that measurement, and also in the number of those up to 100 maunds over the figures of the previous year, but the total number is very steady.

TRAFFIC.

96. The following statement shows the traffic in the Calcutta and Eastern canals during the year under review and the two previous years:—

	Number of boats.	Tonnage of boats by canal measurement.	Weight of cargo carried.	Value of cargo carried.	Tollage, including demurrage.	Percentage of toll on value of cargo.
	No.	Tons.	Tons.	Rs.	Rs.	
1886-87 ... Calcutta canals ...	75,720	1,704,802	645,250	4,19,81,723	3,63,798	
1886-87 ... Tolly's nullah	70,048	618,460	215,084	1,10,60,947	1,09,395

Total ...	162,347	2,485,422	1,134,770	6,40,60,329	5,13,171	0·80

The decrease in tollage is entirely in the Calcutta canals, and is attributable to reasons mentioned before. The number of boats, however, shows an increase, the reason of which is that in the previous year all boats plying outside locks used to take monthly tickets; but under new rules dating from

1st April 1886, such tickets are only given for small boats carrying perishable articles to the soorahs or small channels in connection with the canals. The number of monthly tickets issued was 1,090 against 1,300 in the previous year. The decrease in tollage is further accounted for by the general depression in the rice and jute trade, and in the amount of coal and salt carried, considerable quantities of these commodities now being forwarded by rail and up-country steamers.

COLLECTIONS ON STEAMERS AND FLATS

97. The collections on account of steamers and flats using the Sunderbund route were Rs. 4,365 against Rs. 5,365 in the previous year, the number of vessels being 873 against 1,073. This decrease was due to the vessels of the Bengal Central Flotilla Company having been bought up by the India General Steam Navigation Company.

MISSING TICKETS.

98. The number of missing tickets was still further reduced during the year under review, being 542 against 653 of the previous year, pointing to an improvement in the administration.

REVENUE ESTABLISHMENT.

99. The table below compares the entire cost of the revenue establishment under the Collector and Supervisor with the gross collections made by him :—

	Gross collections made by Supervisor	Cost of entire revenue establishment	Percentage
	Rs.	Rs	
1886-87 ...	4,81,048	42,714	8·84
1885-86 ...	5,13,839	44,751	8 70
1884-85 ...	5,33,694	47,280	8·55

An increase is apparent in the percentage of charge, which is due to a decrease in the traffic. The cost per boat measured shows a slight decrease, being 4·69 annas per boat against nearly 4 87 annas in the previous year, which is satisfactory. The cost of the establishment includes the pay and commission of the Collector and Supervisor.

MAINTENANCE

100. The total expenditure under this head was Rs. 1,07,572, of which Rs. 5,092 was expended on "extensions and improvements" in the erection of girder bridges at Gurriah and Tolleygunge, and Rs. 1,02,480 was expended on actual repairs against Rs. 67,942 in the previous year.

Only such repairs as were indispensably necessary were carried out.

DREDGING.

101 A small quantity of dredging carried out chiefly in removing a shoal which had formed below the Dhappa lock. About 311,500 cubic feet of silt was excavated at a cost of Rs. 3,259, or at a rate including disposal of the silt of Rs. 10·46 per 1,000 cubic feet.

ORISSA COAST CANAL.

102. The following statements show the capital and revenue accounts of this canal:—

I.—CAPITAL ACCOUNT.

HEADS OF ACCOUNT	Outlay during 1886 87	Outlay to end of 1886 87
DIRECT CHARGES.	Rs.	Rs.
I.—Works	2,43 699	29,10,742
II.—Establishment	56,051	6,42,273
III.—Tools and plant	8 800	1,36 927
IV.—Suspense accounts	(—)10,657	47,082
Total ...	2,97,893	37,37,024
V.—*Less* receipts on capital account	679	2,864
Net total ...	2,97,214	37,34,160
INDIRECT CHARGES.		
Capitalized abatement of land revenue	......	730
Leave and pension allowance	7,847	89,833
Total indirect charges ..	7,847	90,563

The expenditure under capital account has been entirely from Provincial Funds with the exception of Rs. 8,66,000 contributed from Imperial Protective Funds, of which Rs. 84,000 was received during the year. There is no interest account. The total expenditure has exceeded the estimate and a revised estimate will very shortly be submitted.

II.—REVENUE ACCOUNT (ACTUALS).

	Expenditure.			Receipts.	
	During 1886-87.	To end of 1886-87.		During 1886-87.	To end of 1886-87.
I.—Maintenance and Repairs.	Rs.	Rs.		Rs.	Rs.
Maintenance and repairs	43,969	67,124	Navigation ...	28,587	42,250
Establishment, including direction and accounts.	10,120	15,446	Miscellaneous ...	901	956
Tools and plant ...	3,432	4,223			
Total ...	57,521	86,793	Total receipts...	29,488	43,206
II.—Revenue management.					
Navigation establishment.	2,183	2,792	Deficit ...	30,216	46,379
Total working expenses	59,704	89,585	Total ...	59,704	89,585

The revenue account of this canal was opened in 1885-86 when Range III, a length of 36 miles, was opened for traffic. The revenue collections were then Rs. 13,718, and maintenance and establishment charges amounted to Rs. 29,881 (the maintenance charges being enhanced by Rs. 20,088 on account of cyclone damages), and a deficit of Rs. 16,183 resulted. During the year under review, Ranges IVA and V were temporarily opened for traffic from 15th July to 31st December 1886, being a further total length of 55 miles. This caused a satisfactory increase in revenue receipts, which amounted to Rs. 29,488, but a deficit of Rs. 30,216 has resulted. The cause of this is the same as operated in the previous year, the bulk of the expenditure being chiefly for repairs to damages caused by the cyclone of 1885 and flood damages, probably nearly Rs. 40,000 of the maintenance charges were due to these. The increase in the revenue receipts is the more satisfactory when it is taken into account that the traffic was entirely local, and good results may be anticipated when through communication, which has already been established, is followed by the remodelling of the Hidgelee Tidal canal and the canal route to Cuttack is thoroughly established.

SARUN CANALS.

103. The Capital and Revenue Accounts of these canals, which have been constructed from provincial funds, are given below :—

I.—CAPITAL ACCOUNT.

Heads of Account.	Outlay during 1886-87.	Outlay to end of 1886-87.
Direct Charges.	Rs.	Rs.
Works	......	4,79,946
Establishment	......	1,64,170
Tools and plant	......	25,612
Total ...	......	6,69,728
Less—Receipts on capital account ...	......	498
Net total ...	......	6,69,230
Indirect Charges.		
Capitalized abatement of land revenue	......	97
Leave and pension allowances	......	27,086
Total indirect charges ...	......	27,183

II.—REVENUE ACCOUNT—(ACTUALS.)

	Expenditure. During 1886-87.	Expenditure. To end of 1886-87.		Receipts. During 1886-87.	Receipts. To end of 1886-87.
	Rs.	Rs.		Rs.	Rs.
Maintenance and repairs	23,481	1,50,207	Water-rates ...	11,072	1,10,666
Establishment ...	5,400	34,544	Navigation ...	......	263
Tools and plant ...	(—)978	(—)7,904	Miscellaneous ...	1,355	7,447
			Total ...	12,427	1,18,376
			Deficit	15,476	58,471
Total ...	27,903	1,76,847	Total ...	27,903	1,76,847

The expenditure of the year which is entirely under revenue account is in excess of that for the previous year, being Rs. 27,903 against Rs 22,751. The extra cost is stated to be on account of river protective works at the head, and heavy expenditure owing to the difficulty in keeping open the head of the Thakraha Sota which is the chief source of the supply for the canals and a new cut having eventually to be made. The revenue receipts are very short, being Rs. 11,072 against Rs. 41,143 in the previous year—when there was a net profit of Rs. 18,392—as against a deficit of Rs. 15,476 in the year under review. The collections on account of water-rates, and guarantee, Rs. 11,072, are about one-half of the yearly guarantee which is Rs. 21,750. The arrears which amounted at the commencement of the year to Rs. 22,035 were at the end of the year Rs. 32,712. The result, as remarked by the Commissioner, is not satisfactory, but no explanation is forthcoming of the reason for the guarantor's witholding payment The Collector states that they have been called upon to pay in their dues without further delay, and the balance is in course of realization.

RAINFALL.

104. The rainfall for the year was excessive, being 60 96 inches, an average of ten stations against 39·27 inches for the previous year, and a yearly average up to 1885-86 inclusive for the area under the influence of the Sarun canals of 37½ inches (observations extending over periods of 3 to 17 years).

IRRIGATION.

105. There was little demand for water for irrigation purposes, or even for indigo manufacture, on which last account the construction of the canals was primarily undertaken. The area irrigated during the year was 2,146 acres against the areas shown below as irrigated in former years :—

	Acres.
1881-82	666
1882-83	1,741
1883-84	21,122
1884-85	7,223
1885-86	4,565

NUDDEA RIVERS.

106. No capital or revenue accounts are kept for these works. The revenue administration is under the direction of the Board of Revenue and civil officers, but proposals have lately been made to transfer the management to the Public Works Department.

REVENUE.

107. The following statement shows the revenue and expenditure on these rivers for the last seven years, including direct charges only :—

Year.	Revenue. Tolls.	Revenue. Miscellaneous.	Revenue. Gross revenue.	Charges.	Net revenue.
	Rs	Rs.	Rs.	Rs.	Rs.
1880-81	2,31,957	676	2,32,633	1,21,846	1,10,787
1881-82	2,10,041	1,179	2,11,220	2,70,720	—59,500
1882-83	1,82,351	616	1,82,967	1,18,231	64,736
1883-84	2,00,908	1,926	2,02,834	1,22,378	80,456
1884-85	[illegible]	476	1,95,457	97,335	98,122
1885-86	1,83,382	399	1,83,781	77,668	1,06,113
1886-87	2,02,707	543	2,03,250	60,213	1,43,037

The results are undoubtedly satisfactory. The charges are less in the year under review than in 1885-86, and do not amount to one-half what they were in 1883-84. At the same time the gross revenue shows an increase, and is greater than in any of the preceding four years.

TRAFFIC.

108. The Administration Report submitted by the Commissioner of the Presidency Division, through the Board of Revenue, gives the following details of the traffic for the year as compared with that of the previous year. The details of former years have been taken from the previous year's revenue report:—

YEAR.	NUMBER OF BOATS.					NUMBER OF STEAMERS AND FLATS.		Number of rafts, &c.	Total number.	*Tonnage of boats by measurement.
	Below 100 maunds.	Above 100 maunds.	Passenger boats.	Empty boats.	Total boats.	Steamers.	Flats.			
										Tons.
1880-81	1,477	34,103	23,608	14,002	73,942	39	53	360	74,394	......
1881-82	1,255	30,824	22,570	13,075	67,724	130	84	977	68,915	1,231,678
1882-83	1,044	27,566	21,013	10,907	60,530	91	60	432	61,113	915,020
1883-84	1,262	28,575	23,746	11,282	64,865	123	67	461	65,516	957,088
1884-85	1,266	29,568	24,189	9,803	64,826	301	95	1,133	66,355	900,208
1885-86	1,065	27 764	21,908	9,592	60,329	254	77	895	61,555	861,467
1886-87	1,284	29,913	23,231	11,192	65,640	354	121	755	66,870	838,403

* The figures for tonnage are taken from the monthly traffic returns.

The traffic shows a tendency to revive, and an increase in the number of boats of all classes is apparent and is more especially noticeable under the head of steamers and flats which is attributed to steamers passing to the upper provinces during the rains, and to a greater number of vessels passing through to Assam, Serajgunge and Naraingunge for oil-seeds and jute. In the Nuddea portion of the Bhagiruthi the increase in traffic is chiefly due to exports of wheat, rice and gram, which were produced in large quantities in the Burdwan and Moorshedabad districts. On the Jellinghee river the increase was chiefly due to the export of wheat and on the Matabhanga river chiefly to the imports of rice from the Eastern districts. The revival in the traffic and the improvement in the receipts is attributed to the favourable state of all the three rivers. The fact of the gross tonnage for the year being less than that for the previous year is accounted for by the introduction of the new system of measurement for empty boats the depth of which in calculating the maundage is now measured from the water-line instead of from the gunwale.

The total value of cargo carried is estimated at Rs. 3,57,12,518, against a value of Rs. 3,38,41,805 in the previous year.

CHARGES.

109. The charges against revenue for the past seven years are detailed in the following statement:—

YEAR.	CHARGES IN PUBLIC WORKS DEPARTMENT.							CHARGES IN CIVIL DEPARTMENT.	GRAND TOTAL.
	Works.	Maintenance and repairs of works.	Working Government steamers.	Petty items.	Establishment.	Tools and plant.	Total.	Charges for collection.	
	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.	Rs.
1880-81	......	63,856	1,025	228	34,759	473	1,00,941	20,905	1,21,846
1881-82	10,339	74,778	......	85	32,528	1,32,198	2,49,928	20,792	2,70,720
1882-83	5,663	54,743	138	1,278	14,181	23,499	99,502	18,729	1,18,231
1883-84	1,931	81,618	543	352	19,207	(—)1,502	1,01,249	21,129	1,22,378
1884-85	30	57,579	935	2,276	13,976	1,749	76,545	20,790	97,335
1885-86	......	42,124	800	1,422	9,901	1,759	56,006	21,662	77,668
1886-87	......	26,327	1,200	1,984	6,665	1,409	37,585	22,628	60,213

The expenditure in the year 1881-82 was altogether abnormal on account of the heavy charge of Rs. 1,38,198 for tools and plant. This sum was on account of a dredger and set of barges which was charged against these rivers.

The decrease in charges incurred by the Public Works Department under maintenance is considerable, but no explanation is afforded under this head by the Superintending Engineer. The work carried out was of the usual character, the training works on the Bhagiruthi being for the purpose of maintaining navigation throughout the year, and on the other rivers for the purpose of maintaining a supply of drinking water for the villages on their banks.

COLLECTION CHARGES.

110. The total cost of collection is slightly in excess of that of the previous year which is accounted for by the greater commission drawn by the Toll Collector owing to increased collections. The percentage of cost on the gross revenue is, however, less, being 11·1 against 11·8 in the previous year. The cost per boat measured has also fallen from 5·6 to 5·4 annas.

EDEN CANAL.

111. This work has been constructed entirely from Provincial funds, and there is no capital or revenue accounts. Its primary object is the supply of drinking water to the villages on the banks, and it is also the source of supply for the Burdwan water-works.

EXPENDITURE

112. The expenditure for the year was as follows:—

	Rs.
Works	16,094
Maintenance	22,258
Establishment and tools and plant	10,072
Total ...	48,424

113. The revenue derived was Rs. 810.

IRRIGATION.

114. All irrigation from the canal was prohibited under the orders of Government, as it was found that a guarantee could not be obtained for the extra cost of maintenance that would ensue from keeping up the supply of water. The question of regular irrigation from this canal is under consideration awaiting proposals for a workable scheme under which those benefited will defray the cost of additional works necessary to keep up the level of the water, and also the cost of the yearly maintenance.

MADHUBAN CANAL.

IRRIGATION.

115. This is a small provincial work for which no capital or revenue accounts are kept. No irrigation was carried out from it during the year on account of a breach in the weir.

EXPENDITURE.

116. The expenditure for the year was as below:—

	Rs.
Works	4,380
Maintenance	1,263
Establishment	1,298
Total ...	6,941

GENERAL REMARKS.

NET INCOME.

117. The net income of the year 1886-87 from Major Irrigation works in Bengal amounted to Rs. 54,029 thus:—

	Rs.
Gross direct receipts	13,86,629
" charges	13,32,600
Net revenue ...	54,029

The budget estimate for net revenue was Rs. 2,05,000, and the revised estimate was (—) Rs. 55,000, thus:—

	Budget.	Revised estimate.
	Rs.	Rs.
Direct receipts	13,30,000	13,30,000
" charges	11,25,000	13,85,000
Net revenue ...	2,05,000	(—) 55,000

The net revenue of the year, though much below the budget estimate in consequence of heavy charges on account of repairs to the Mahanadi weir, was more favourable than anticipated in the revised estimate, owing to large collections of water-rates on the Sone Canals at the end of the year.

EARNINGS.

118. The following statement shows the principal results of the year calculated by the "Earnings" as compared with similar results of the previous year:—

	1885-86.	1886-87.
	Rs.	Rs.
Orissa Canals	—1,37,049	—3,00,839
Midnapore Canal	54,782	9,522
Hidgellee Tidal Canal	3,846	31,569
Sone Canals	3,39,655	2,05,864
	2,61,234	—53,884

VALUE OF CROPS.

119. The approximate value of crops irrigated by Major Irrigation work during the year is shown below:—

Canals.	1885-86.		1886-87.	
	Area irrigated.	Value of crops.	Area irrigated.	Value of crops.
	Acres.	Rs.	Acres.	Rs.
Orissa Canals ...	72,339	9,91,596	77,709	9,75,447
Midnapore Canal ...	70,604	15,96,096	69,762	15,34,764
Sone Canals ...	332,570	86,44,997	268,204	67,43,580
Total ...	475,513	1,12,32,689	415,675	92,53,791

PLANTATIONS.

120 The state of the canal plantations on the major works is shown in the statement below:—

Canals.	1885-86.			1886-87.		
	Trees, 12 feet high and above.	Saplings, between 4 and 12 feet.	Seedlings.	Trees, 12 feet high and above.	Saplings, between 4 and 12 feet.	Seedlings.
	No.	No.	No.	No.	No.	No.
Orissa Canals ...	41,817	26,998	74,083	50,737	28,148	68,719

NAVIGATION REVENUE.

121. The following table shows the total of toll collections on the canals in Bengal distinguishing between canals solely for navigation and those for irriga-

tion and navigation with percentage of cost of establishment for collection and cost of measuring each boat:—

	Toll collections.		Percentage of charges for collection to amount collected.		Cost of measuring each boat.	
	1885-86.	1886-87.	1885-86.	1886-87.	1885-86.	1886-87.
Works partly for irrigation and partly for navigation.	Rs.	Rs.			Annas.	Annas.
Orissa Canals	64,093	58,664	13·9	15·5	6·9	10·1
Midnapore Canal	1,25,331	1,09,693	6·0	6·9	2 7	2·6
Sone Canals	41 712	49,665	32·7	29·2	30·2	27·1
Total ...	2,31,136	2,18,022	13 0	14 3	6 6	7·2
Works for navigation only.						
Hidgellee Tidal Canal ...	52,143	51,904	6·0	5·8	2·6	2·7
Calcutta and Eastern Canals ...	5,13,839	*4,73,193	8·7	8·9	4·9	4·6
Orissa Coast Canal	13,663	28,587	4·4	7·6	1·8	3·8
Nuddea Rivers	1,83,781	*2,02,707	11·8	11·1	5 6	5·5
Total ...	7,63,426	7,56,391	9·2	9·3	4·8	4·7
Grand Total ...	9,94,562	9,74,413	......	......	......	......

* Do not include miscellaneous receipts.

In the above statement if Rs. 16,660 miscellaneous receipts included in toll collections of the year 1885-86 were omitted, the gross toll collections from both classes of canals would be Rs. 9,77,902 against Rs. 9,74,413 for the year under review. The toll collections under canals for navigation only would show an excess collection of about Rs. 10,000 over the figures for the previous year and for canals for irrigation and navigation a decrease of about Rs. 13,000 chiefly on account of the falling off in the receipts for the Midnapore canal. Where the percentage of cost of collection and the cost of measurement of each boat is greater than that for the previous year, the cause is owing to the decrease in the traffic. In the Orissa Coast canal the large increase is due to the increase in the number of toll stations, while still the traffic was undeveloped. In this canal and in the Calcutta and Eastern Canals the cost of establishment is not included, being shown under maintenance charges. In future the charges should be made under the proper head. In the case of the Calcutta Canals and Nuddea Rivers, the percentage is heavy on account of the pay and commission of the Collector and Supervisor in the former case, and the large pay and commission received by the Toll Collectors in the latter, the system of administration being different to that in other canals. On the whole the result for the year may be considered very favourable, taking into account the decrease in the traffic in the Orissa and Midnapore canals, which may be considered accidental, the causes being explained under the heads of those canals.

PUNCTUALITY OF REPORTS.

122. The date for the submission of Revenue Reports to the office of the Chief Engineer is the 15th September. The following statement shows the dates when the different reports were received :—

		In 1886.	In 1887.
Orissa Circle ...	Commissioner's report ...	18th October ...	21st September.
	Superintending Engineer's report	1st November ...	26th ditto.
South-Western Circle ...	Commissioner's report ...	14th September ...	8th ditto.
	Superintending Engineer's report	23rd ditto ...	26th October.
Sone Circle ...	Commissioner's report ... Superintending Engineer's report	17th ditto ...	15th September.

The reports were very punctual with the exception of that of the Superintending Engineer, South-Western Circle. The Finance and Administrative Accounts of the year 1886-87 were not received from the Examiner until the 3rd September. A good deal of time has had again to be wasted in attempting to eliminate the discrepancies between the returns received through the Commissioners and from the Superintending Engineers and Examiner, though there is undoubtedly an improvement in this respect.

C. W. I. HARRISON, *Lieut.-Col.*, R.E.,
Officiating Chief Engineer.

The 20th February 1888.

Rainfall, Weather, and State and Prospects of the Crops.

Statement showing Rainfall, Weather, and State and Prospects of the crops in the different districts of Bengal, as reported to Government during the week ending the 3rd March 1888.

Division	No.	District and date of return.	Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BENGAL.				
		Western Districts.		
BURDWAN DIVN.	1	Burdwan, Mar 3, '88	Nil	Weather—clear and warm. Prospects of crops fair. Rice sold at 21 seers per rupee.
	2	Bankoora " 3, '88	Nil	Weather—seasonable. Mustard and gram are being gathered. Pressing of sugarcane proceeds briskly. Wheat and barley are prospering. Cotton is in pod. No change in the rice market.
	3	Beerbhoom " 3, '88	Nil	Weather—seasonable. State and prospects of crops good. Wheat in ear. Sugarcane harvest promises well.
	4	Midnapur " 3, '88	Nil	Weather—getting hot. *Rubbi* moderate in most parts except Binpur, where it is bad Sugarcane, indigo and *boro* good.
	5	Hooghly " 3, '88	Nil	Weather—normal. State and prospects of crops good.
		Howrah " 5, '88	Nil	Weather seasonable Sugarcane is being cut, and *rubbi* crops reaped. Sugarcane is everywhere a 16-anna crop. The outturn of peas, linseed and mustard is good.
		Central Districts.		
PRESIDENCY DIVN.	6	24-Perghs. Mar 6, '88	Nil	Weather—bright; getting warmer daily. Prospects of crops good. Ploughing in progress. Manufacture of sugar still continues.
	7	Nuddea " 3, '88	Nil	Weather—seasonable. Crops on the ground good; outturn of those harvested has been fair
	8	Khoolna " 3, '88	Nil	Days hot; nights and mornings cool. Cold weather crops doing well.
	9	Jessore " 3, '88	Nil	Nights and mornings still somewhat cold. Lands are being tilled for early crops. Mustard and *kalai* are being gathered. Prospects good.
	10	Moorshedabad " 3, '88	Nil	Weather—getting warmer. State of *rubbi* crops good. They are being cut.
RAJSHAHYE DIVN.	11	Dinagepur Mar. 3, '88	Nil	Weather—seasonable. Prospects of *rubbi* and other crops continue satisfactory. Lands are being prepared for *bhadoi* crops. Rice selling at 20 to 26 seers per rupee.
	12	Rajshahye " 3, '88	Nil	Weather—days hot; nights cool. Harvesting of mustard nearly finished. Prospects of *boro* paddy and spring crops generally good.
	13	Rungpur " 3, '88	Nil	Weather—days very hot. Prospects of winter crops continue good. Rain is urgently required.
	14	Bogra " 3, '88	Nil	Weather—seasonable. State and prospects of crops satisfactory.
	15	Pubna " 3, '88	Nil	Weather—cloudy and warmer. State and prospects of crops favourable.
	16	Darjeeling " 3, '88	Nil	Weather—warm. State and prospects of crops good.
	17	Julpigoree " 3, '88	Nil	Weather—days getting warmer; mornings and nights cool Ploughing for early rice continues. State and prospects of crops good
		Eastern Districts.		
DACCA DIVISION.	18	Dacca. Mar. 3, '88	Nil	Weather—fine and getting hot. *Aus* paddy and jute are being sown. State of *rubbi* crops on the whole good.
	19	Furreedpur " 3, '88	Nil	Weather—still fairly cool in the mornings and evenings. Prospects of crops good everywhere.
	20	Backergunge " 2, '88	Nil	Weather—now and then cloudy; otherwise seasonable. Prospects of crops good.
	21	Mymensingh " 2, '88	Nil	Weather—seasonable. State and prospects of crops good.
CHITTAGONG DIVN.	22	Chittagong Mar. 6, '88	Nil	Weather—seasonable. Prospects of standing crops fair. Prices stationary.
	23	Noakholly " 2, '88	Nil	Weather—variable: warm during the day; cloudy occasionally. *Rubbi* crops doing well. Cultivation for *aus* crop in progress
	24	Tipperah " 1, '88	Nil	Weather—getting hot; mornings and nights cool. Agricultural prospects are as good as can be desired.
	25	Chittagong Hill Tracts. Feb. 28, '88	Nil	Weather—cold in the morning and hot at noon. Tobacco and other winter crops doing well. *Jum* cutting progressing.
		Hill Tipperah " 29, '88	Nil	Weather—getting warm. Tobacco and sugarcane are still being cut. Sowing of *til* (oilseeds) and transplanting of *boro* paddy going on.

	No.	District and date of return.		Rainfall at Sudder Station in inches.	Character of the weather and state and prospects of the crops.
BEHAR.					
PATNA DIVN.	26	Patna	Mar. 3, '88	Nil	West winds no longer blowing; air sultry. Prospects of *rubbi* crops generally good. *Kerao* and *masur* in the Barh sub-division have been extensively damaged by insects Mustard, *kerao* and *masur* are being harvested. Opium extraction is going on. There is a slight increase in the prices of food-grains.
	27	Gya	,, 3, '88	Nil	Weather—seasonable. *Rubbi* is being harvested, and opium extracted.
	28	Shahabad	,, 3, '88	Nil	Weather—getting hot, though mornings and evenings continue still pleasantly cool. Harvesting of *rubbi* crops in progress, and a fair outturn is expected. Fields are being prepared for sugarcane. Opium is being collected; the produce has not been so good as was expected owing to unfavourable weather.
	29	Durbhunga	.. 3, '88	Nil	Weather—getting warm. Harvesting of mustard and linseed is in progress. Opium is being collected. Mango is in blossom Prices stationary.
	30	Mozufferpur	,, 3, '88	Nil	Days bright and warm; nights and mornings cool. *Rubbi* crops approaching maturity. Mustard being harvested. Prospects of poppy fair; collection of opium in full force
	31	Saran	.. 3, '88	Nil	Weather—clear and getting warm. Harvesting of *rubbi* in progress; outturn favourable. Indigo sowings commenced. Poppy doing well; opium is being extracted.
	32	Chumparun	.. 3, '88	Nil	Weather—getting warm and dry with west wind. Prospects of all standing crops good. Opium is being extracted. *Rubbi* crops ripening
BHAGULPORE DIVN.	33	Monghyr	Mar. 3, '88	Nil	Weather—bright and clear; getting warm. Prospects of *rubbi* and poppy continue favourable. Indigo sowings in progress in the Begoserai sub-division
	34	Bhagulpur	.. 3, '88	Nil	Weather getting hot, but still cool at night. Prospects of standing crops fair. Lands are being prepared for *bhadoi* and sugarcane Peas, *khesari*, *masuri*, and *tisi* are being gathered.
	35	Purneah	,, 3, '88	Nil	Weather—clear and warm. *Rubbi* crops doing well. Tobacco is being cut.
	36	Maldah	.. 3 '88	Nil	Weather—fine; getting warm. Prospects of spring crops good except in the outpost of Tulsihatta, where insects and want of rain have done some damage. Transplantation of *boro* paddy continues. Common rice selling at an average of 23 seers per rupee.
	37	Sonthal Perghs.	.. 3, '88	Nil	Temperature rising with west winds; nights fairly cool. Prospects of *rubbi* crops good. *Boro dhan* is being transplanted at Rajmahal.
ORISSA.					
ORISSA DIVN.	38	Cuttack	Mar. 2, '88	Nil	Weather—seasonable; mornings foggy. Ploughing in progress *Dalua* rice coming into ear. Common rice sells at 21 seers per rupee in town. Cattle-disease has occurred in some places in the interior.
	39	Pooree	,, 1, '88	Nil	Weather—seasonable. Lands are being ploughed. *Dalua* crop is in ear. *Rubbi* is being gathered. Mango trees are abundantly in fruit. Common rice 24 seers 3 chittacks per rupee in the Sudder sub-division and 23 seers 8 chittacks in the Khurda sub-division.
	40	Balasore	,, 2, '88	Nil	Weather—seasonable. Prospects of *dalua* rice favourable. Land is being ploughed.
CHOTA NAGPORE.					
South-West Frontier Agency.					
CHOTA NAGPORE DIVN.	41	Hazaribagh.	Mar 2, '88	Nil	Weather—bright; getting warm. Estimate of average yield of *rubbi* eight annas. Collection of opium in progress; good outturn expected. Ploughing and planting of dry weather crops in progress. Condition of agricultural stock good, except in places where cattle-disease reported.
	42	Lohardugga	,, 3, '8	Nil	Weather getting warm. *Rubbi* is being harvested. Slight rise in prices of food-grains reported from Palamow.
	43	Singbhoom	,, 2, '88	Nil	Weather—cloudy; getting hot The reports of the *rubbi* crops are good. Sugarcane has yielded well. Cotton expected to give a good outturn.
	44	Manbhoom	,, 3 '88	Nil	Weather—getting warmer. Sugarcane pressing in progress; outturn excellent. Prospects of all spring crops fair.

METEOROLOGICAL OFFICE, BENGAL,
The 6th March 1888.

A. PEDLER,
Offg. Meteorological Reporter to the Govt. of Bengal.

Abstract of the results of Meteorological Observations taken at the Alipore Observatory in the month of February 1888.

	Inches.	Date.	Hour.
The mean pressure of the month	29·965		
The average pressure of February from 24 years' registers ...	29·945		
The highest pressure in the month	30·171	3rd	10h.
The lowest pressure in the month	29·804	15th	16h
The range of pressure	0·367		
	Hours.		
The total number of hours of bright sunshine during the month	274·1		
The maximum possible number of hours of sunshine ...	329·7		
	⊖		
The mean temperature of the month	69·7		
The average temperature of February from 24 years' registers	73·0		
The highest temperature in the month	89 4	27th	
The lowest temperature in the month	50·9	1st	
The range of temperature during the month	38·5		
The mean daily range of temperature	21·2		
The greatest range of temperature in one day	29 5	25th	
	Per cent.		
The mean humidity of the month	69		
The average humidity of February from 24 years' registers ...	67		
	Inches.		
The mean vapour tension of the month	0·485		
The average vapour tension of February from 9 years' registers	0 538		
The mean cloud proportion of the month ...	1·70		
The average cloud proportion of February from 11 years' registers	1·87		
	Inches.		
The total rainfall of the month	1·60		
The total rainfall indicated by a Beckley's self-registering rain-gauge (mouth of the gauge about 52 feet above the ground)	1·57		
The average fall of February from 48 years' registers ...	0·87		
The greatest fall in 24 hours	1·49	9th	
	Days.		
The number of rainy days in the month	2		
The average number of rainy days in February from 24 years' registers	3		
	⊖		
The mean maximum equilibrium temperature of solar radiation during the month	136·0		
The mean difference of sun and air temperatures	55·0		
The greatest sun temperature	143·5	29th	
The greatest excess of sun over air temperature	59·4	12th	
The mean temperature of the nocturnal radiation thermometer on woollen cloth	51·4		
The mean depression of the nocturnal radiation thermometer below the minimum air temperature at 4 feet above the ground	8·4		
The greatest depression of the nocturnal radiation thermometer below the minimum air temperature	11·6	24th and 29th	
	Miles.		
The mean movement of the wind per day	68·3		
The greatest movement of the wind in one day	179·0	10th	
The greatest movement of the wind in one hour	13·0	9th, 6 to 7 P.M.	
The number of hours with winds from each of the 8 points—			

N. 106, NE. 20, E. 11, SE. 24, S. 49, SW. 144, W. 90, NW. 111, Calm 141.

The results of observations at the Alipore Observatory are not rigorously comparable with the registers of past years (at the Park-street Observatory). The barometer is about 8 feet higher at Alipore, and, other things being equal, reads therefore ·008 lower. The diurnal range of temperature is also greater at Alipore, and the mean temperature apparently about 2·1° lower; and, finally, the thermometer which furnished the record of temperature at the Surveyor-General's Office during 20 years and upwards is found to read 0·6 higher than the Kew standard thermometer, which is the standard of reference at the present Observatory.

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, INDIA;
Calcutta, the 5th March 1888.

Meteorological Report of the Province of Bengal.

STATION OBSERVATIONS.

Meteorological Division.	District.	Representative station.	Air pressure. Mean barometric height, 10 A.M.	Mean reduced to sea-level.	Variation from mean.	Wind. Prevailing direction.	Mean wind velocity.	Temperature. Highest during week.	Date.	Lowest during week.	Date.	Mean maximum temperature.	Mean minimum temperature of week.	Mean daily temperature of week.	Variation from normal mean of week.	Mean 10 A.M. temperature.

* Means for six days.

Explanation.—Summary.—The normal means of air pressure and temperature are the arithmetical average or means of the reading during the same period for the last ten

The *humidity* of the atmosphere is expressed as percentage, saturated air being represented by 100. A clear sky is denoted by 0 and an overcast sky by 10. The number

the numerical means or average of the rainfall in that district determined from the returns sent in by the sub-divisional station for the period in question during the past 12

ations in the district sending in returns divided by the number of stations. A rainy day is one on which at least hundredth of an inch fell.

for the week ending Friday, the 2nd of March 1888.

DISTRICT OBSERVATIONS.

Explanation.—...... Indicates that no rain has fallen. If the return for any day has not been received, the corresponding space is left blank. If any of the returns wanting, the corresponding spaces in the total rainfall columns are left blank.

CALCUTTA, *the 6th March* 1888.

SUMMARY OF THE RAINFALL AND METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL FOR THE WEEK ENDING FRIDAY, THE 2ND MARCH 1888.

The meteorological conditions which obtained over Bengal during the previous week were those which mark the gradual change from the north-east monsoon to the hot weather season. Similar conditions have obtained throughout the whole of the present week. Westerly and north-westerly winds have prevailed during a considerable portion of the week and over a large part of the province, but at the southern stations winds have been rather variable, and they shew a decided tendency to become southerly. The variations of pressure have been of the usual oscillatory character, though on the whole pressure has been decreasing. Temperature on the other hand has been almost steadily rising, and towards the end of the week some rather high maximum temperatures were reported. Humidity has remained fairly low at most stations, and the sky has been almost free from cloud or very lightly clouded over the whole province; while at no station has any rain been reported. The meteorological conditions for the week in fact again call for no particular remark, except that the hot wether conditions are rapidly establishing themselves.

Pressure—Generally fell on the 25th and was almost stationary on the following day; this was succeeded by a moderate fall lasting two days, and then by a slight rise lasting the same period; but on the 2nd pressure was again falling. Notwithstanding the decrease, the average pressure for the week has been decidedly above the normal, and taking into consideration only those stations from which observations have been received for many years, and which therefore yield reliable averages, the mean pressure for the province has been 0·053 inch in excess of the normal.

Temperature.—As has been already stated, temperature has risen almost steadily throughout the week, and thus, while the average mean temperature of the whole of the province in the previous week was 69·7°, in the present week it has risen to 72·9°, showing an increase of 3·2° in the week. The actual mean temperatures recorded during the week have, however, not been far removed from the normal, and for the whole province the mean temperature has been 0·2° lower than usual. The actual temperatures recorded and their variations from the normal are best seen in the table below, where the average maximum, minimum, and mean temperatures for the week at nine typical stations in the province are compared with the normal values for the same period. Generally speaking it will be seen that the maximum or day temperatures have been rather above the normal, while the minimum or night temperatures have been below it.

Table showing the excess or defect of the actual mean temperature from the normal for the week ending the 2nd March 1888.

	Normal mean maximum temperature for the week ending 2nd March.	Actual mean maximum temperature for the week ending 2nd March 1888.	Variation of actual mean from the normal	Normal mean minimum temperature for the week ending 2nd March.	Actual mean minimum temperature for the week ending 2nd March, 1888.	Variation of actual mean from the normal.	Normal mean daily temperature for the week ending 2nd March.	Actual mean daily temperature for the week ending 2nd March, 1888.	Variation of actual mean from the normal.

Rainfall—Has been entirely absent from the province for the whole week.

The following table gives the summary of the temperature and rainfall data of each of the seven meteorological divisions of the province for the week ending Friday, the 2nd of March 1888:—

Meteorological Divisions.	Temperature.						Rainfall.									
	Highest observed during week.	Lowest observed during week.	Averages for week.			Average mean of week above or below normal mean of week.	Of week.			Rainy days.			Since 1st of February.		Since 15th May 1887.	
			Of highest of each day.	Of lowest of each day.	Of mean for each day.		Average.	Normal average.	Variation.	Average number in week.	Normal average number in week.	Variation.	Average.	Normal average.	Average.	Normal average.

The total fall from 1st January to 3rd March 1888	2·52
The average fall of the corresponding period for 24 years, S. G.'s Office ...	1·78

The mean pressure, temperature, &c., are deduced from the traces of the Barograph and Thermograph.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected approximately to those of the standard Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office, and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground.

≡ fog, Δ dew.

A. PEDLER,

For Offg. Meteorological Reporter to the Govt. of India.

METEOROLOGICAL OFFICE, GOVT. OF INDIA;

Calcutta, the 5th March 1888.

Abstract of the Results of the Thermometric Observations taken at the Meteorological Office, Chowringhee, in the month of February 1888.

		Date.
	°	
The mean temperature during the month	71·2	
The highest temperature during the month	91 5	27th.
The lowest temperature during the month	51·7	1st.
The range of temperature during the month	39 8	
The mean daily range of temperature during the month ...	23·1	
The greatest range of temperature in one day during the month ...	30 9	26th.
	%	
The mean humidity during the month	64	
	Inches.	
The mean vapour tension during the month	·489	
The total rainfall of the month	1·69	
The greatest fall in 24 hours	1·65	10th.
	Days.	
The number of rainy days in the month	2	

A. PEDLER,
For Offg. Meteorological Reporter to the Govt. of India

METEOROLOGICAL OFFICE, INDIA;
The 5th March 1888.

Results of the Thermometrical Observations taken at the Meteorological Office, Chowringhee, from 26th February to 3rd March 1888.

Month.	Date	Temperature.				Mean wet bulb.	Hygrometry.			Rain.
		Mean	Maximum	Range.	Minimum.		Vapour tension.	Dew point.	Humidity.
